About Web VTS

Web VTS is a web-based maritime traffic monitoring solution for:

- Ports
- VTS
- Pilots
- Shipping Companies
- Logistic Companies
- Shipping Agencies
- Charterers
- Tug Companies
- Coast Guards
- Port Security
- Marine Exchanges
- Municipal Police Departments
- Oil Rig Companies
- Environmental Protection Divisions
- Insurance Companies
- Aids to Navigation Management
- Long-Range Fleet Monitoring

Web VTS is designed for ship traffic and monitoring centers. It increases the safety, security and efficiency of sea operations. Web VTS provides a complete AIS interface, including the ability to:

- View and track multiple ships simultaneously
- Display specific ship information
- Display AtoN monitoring information
- Display weather station data
- Display LRIT ship positions
- Send and receive safety related messages
- Send and receive text messages

Web VTS's interface and display of AIS related information offers all users a substantial leap forward in their ability to communicate and interact with sea-based ships. Since Web VTS is fully configurable, users can customize color patterns for AIS targets, set alarms, create reports, filters, and zones.

Web VTS has the following features:

- Zone Designer (creating user defined zones: circle, polygon, line)
- Filter Designer (filtering ships by name, MMSI, call sign, group of ships, type of AIS device or ship, speed of ship, size of ship)
- Alarm Designer (user defined alarms, pop-up alarm window, e-mail and SMS notifications, turning on siren or projector)

- Report Designer (creating user defined reports, including arrival/departure, actual berth time, speed violation, and others)
- Route Designer (creating routes)
- Cable Designer (entering cable location data)
- Dynamic ETA prediction and distance to way points
- Unlimited History Replay function
- Full control of users (what users can monitor and/or what functions users can use)
- Receiving safety messages from ships
- Sending addressed and broadcast safety messages to ships
- Sending virtual AtoN messages
- Monitoring Radar-ARPA targets (radar support)
- CCTV PTZ Camera support (automatically follow a ship)
- Inmarsat Long-range monitoring
- Iridium Short Burst Data service support for online monitoring of any sensors on board such as for fuel consumption, engine on/off and others
- SmartOne support that is a battery-operated satellite transmitter to track barges, tugs, containers and other assets
- Customizable colors for AIS targets
- Multi-language support

Web VTS is intended for a wide range of AIS (Automatic Identification System) web browser users.

SiiTech Web VTS Manual

The screenshot displays the SiiTech Web VTS interface. At the top, a browser window shows the URL: `vts.sitech.com/VTS/AView.aspx?code=113%3flat%3d49.1269153133123&lng=-122.756767290037&zoom=15&mi`. Below the browser window is a toolbar with various navigation and tool icons. A search bar is located below the toolbar, with the text "Search" and "Find" buttons. To the right of the search bar are buttons for "Ship ETA", "Route ETA", and "Link".

The main area of the interface is a map of Vancouver, British Columbia, Canada. The map shows the city's layout, including major roads like the Trans Canada Hwy (1A) and the Burrard Inlet. Numerous ship icons are overlaid on the map, representing vessels in the area. The icons are color-coded and shaped to represent different types of vessels. A scale bar at the bottom left of the map indicates 1 NM and 2 km. A red warning text "Not for Navigational Use" is visible on the map.

On the left side of the map, there is a list of vessel names and their status (ETA):

- 003160144 (0m)
- 316023434 (1h 38m)
- ABITIBI (4m)
- ACE (0m)
- AFRICAN JAY (0m)

Web VTS Pro Plus v7.35.01 Powered by SiiTech

Overview

Web VTS is a web-based marine traffic monitoring system for ports and other organizations interested in monitoring ship movements in real-time mode.

Web VTS increases the safety, security and efficiency of operations within a port.

Web VTS provides a complete AIS/ARPA interface that includes the ability to:

- View and track all AIS equipped ships
- View and track ARPA targets
- Display specific ship information
- Receive addressed and broadcast safety messages
- Send addressed and broadcast safety messages (only with AIS Class A transponder or AIS Base station)
- Automatically send virtual Aids to Navigation (AtoN) messages (only with AIS Base station)

Web VTS assists port authorities and other traffic monitoring operators to:

- Identify and track AIS equipped ships
- Display ARPA targets
- Provide additional information to assist collision avoidance and investigation
- Archive important AIS data into a database
- Make any operational decision or action
- Provide full range of unique marine traffic reports

Web VTS's interface and display of AIS/ARPA related information offers port operators a substantial leap forward in their ability to communicate and interact with sea-based ships. Since Web VTS is fully configurable, operators can adjust the size of the chart panel, customize color patterns for AIS targets, set alarms, and create reports, filters, and zones specific to each user.

Web VTS receives AIS/ARPA data from SiiTech AIS Server and provides a graphic display of AIS targets onto electronic charts and maps.

Web VTS supports Google maps, Microsoft Virtual Earth maps, S-57 (NOAA) and BSB nautical charts.

Starting Web VTS

1. Open web browser and type the following URL address: **http://<yourwebsite>/VTS**. You should see the **Login** screen.
2. Enter your **Login** name and **Password** and click the **Login** button to open the Web VTS main screen.

Toolbar

As soon as you start Web VTS, you'll see its toolbar at the top of the application window. The toolbar contains tools to access commands and perform other actions. You click a tool to perform its action. Some tools complete the action immediately; others place you in a mode to complete the action.

Maps and Charts

- Display OpenStreetMaps.
- Display Bing Maps.
- Select Map View.
- Select Satellite View.
- Select Hybrid View.
- Display Raster Navigational Charts (BSB).
- Display Electronic Navigational Charts (ENC Base).
- Display Electronic Navigational Charts (ENC Standard).
- Display Electronic Navigational Charts (ENC All).
- Select Water Only View.

Designers

- Open Filter Designer.
- Open Zone Designer.
- Open Route Designer.
- Open Alarm Designer.
- Open Report Designer.
- Open Task Scheduler window.
- Open Cable Designer (optional).

Tools and Commands

- Open CCTV Cameras window (optional).
- Open Companies window.
- Show Alarm Events window.
- Open Event Log window.
- Open Run Report window.
- Open History Replay window.
- Open Inbox window.
- Open Outbox window.

-  – Open Sent Messages window.
-  – Open Virtual Aid-to-Navigation window.
-  – Open Emergency and Incident Command Support window (optional).
-  – Open Digital Selective Calling (DSC) Inbox (optional).
-  – Open User Info window.
-  – Logout.
-  – Help (Web VTS User's Guide).

Commands and options

-  – Show ship names.
 -  – Show ship tracks.
 -  – Show information pane.
 -  – Show information balloon.
 -  – Follow selected ship.
 -  – Show only selected ship.
 -  – Show ship names list.
 -  – Show ports (optional).
 -  – Show mile markers.
 -  – Show weather stations (optional).
 -  – Activate measurement tool.
 -  – Open AtoN Status window (optional).
 -  – Open AtoN Manager window (optional).
 -  – Open AtoN List window (optional).
 -  – Open Tide and Current Predictions window.
 -  – Open History Graph window.
 -  – Open Instrument Panel window.
-
-  – Open Ship Positions window.
 -  – Open LRIT Ship Positions window (optional).
 -  – Open Ship Data window.
 -  – Open Ship Details List window.
 -  – Open EICS Ship Details List window.
 -  – Open Import LRIT Ships window.
 -  – Open Fuel Consumption by Speed window (optional).
 -  – Open Link 1 URL in a separate window
 -  – Open Link 2 URL in a separate window.
 -  – Open Link 3 URL in a separate window.
 -  – Open Link 4 URL in a separate window.
 -  – Open My Stations Status window.
 -  – Show My Stations on the map.
 -  – Open Station Manager window..
 -  – Open All Stations List window.

SiiTech Web VTS Manual

-  – Show All Stations on the map.
-  – Open Options window.
-  – Open Users window.

 Select a predefined location from the drop-down list to center the map on your desired location. Use  to open the **Locations** window and add or edit location data.

 Select a predefined filter from the drop-down list. Use  to open the **Filter Designer** window and add or edit a filter. Click  to the **Filter Legend** window.

 Type ship name, MMSI number, or Call Sign in the Search box. Click **Find** to search for this ship. Click  to open the **Ship List** window.

Click  to monitor distance and estimated time of arrival (ETA) for the selected ship.

Click  to monitor distance and estimated time of arrival (ETA) for all ships along the selected route.

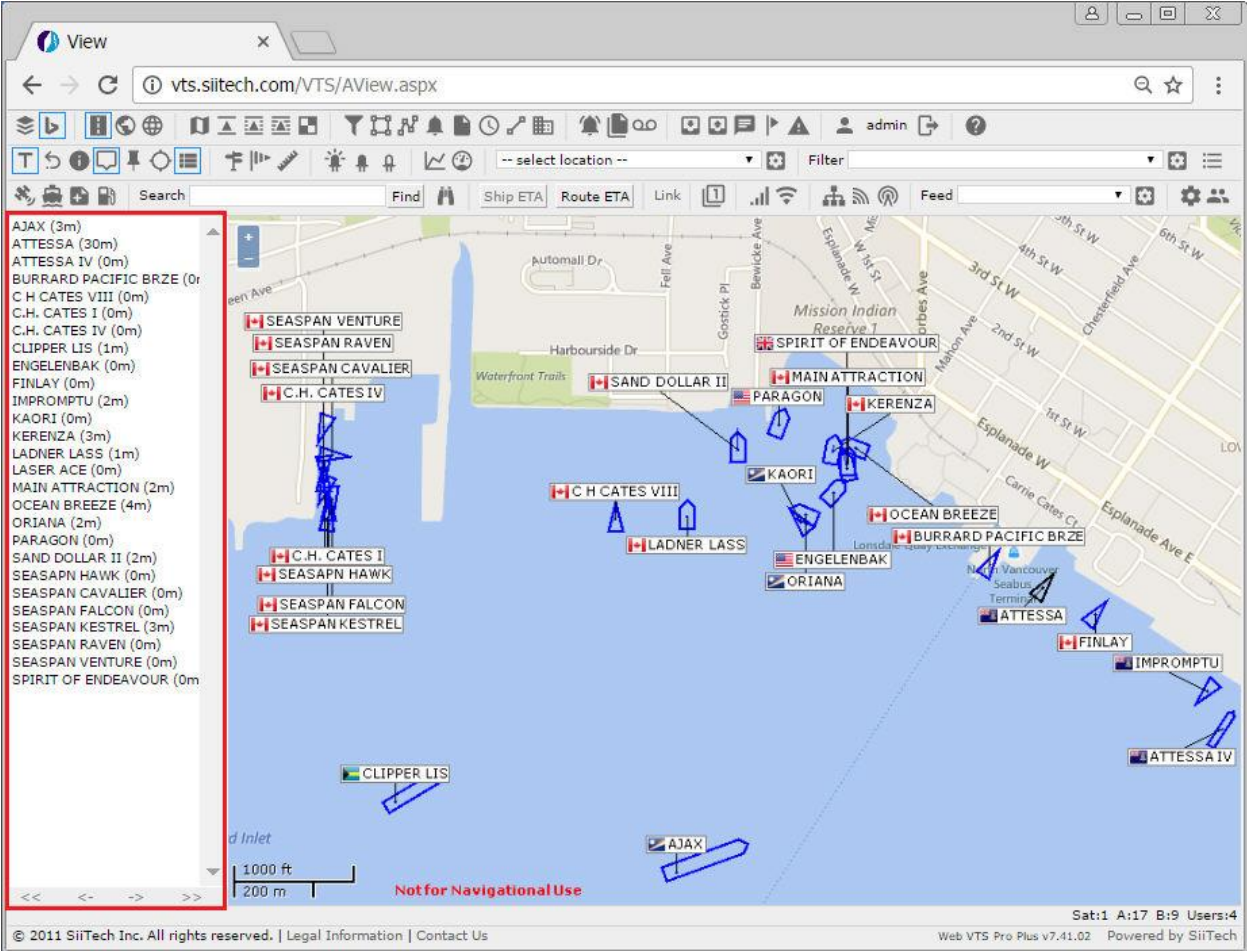

To generate the URL of the current page, right click  and select "Copy link address".

Basic Features

Ship Names List

As soon as you start Web VTS, you will see the **Ship Names List** on the left side of the application window.

This will show the names of all ships currently visible in your browser window.

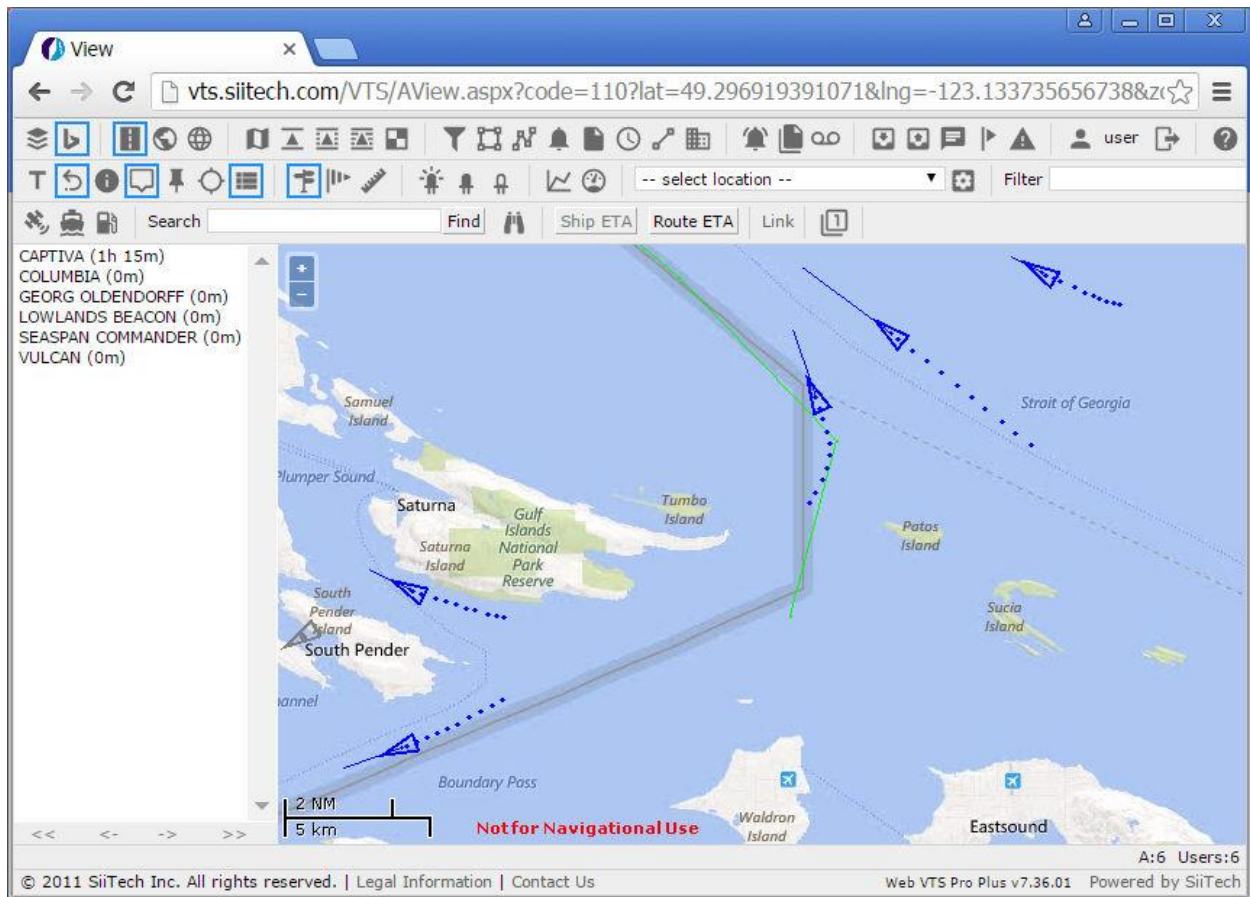

Use the scroll arrows pictured at the bottom to navigate through list pages.

Note: You can close the **Ship Names List** at any time by clicking the **Show Ship Names List** button  in the toolbar to deselect it.

Show Ship Tracks

Click the **Show Tracks** button  in the toolbar to display ship tracks on the map view.

Note: Ships' tracks will appear if there is enough free space to draw them. Web VTS calculates this automatically.

View Ship Information

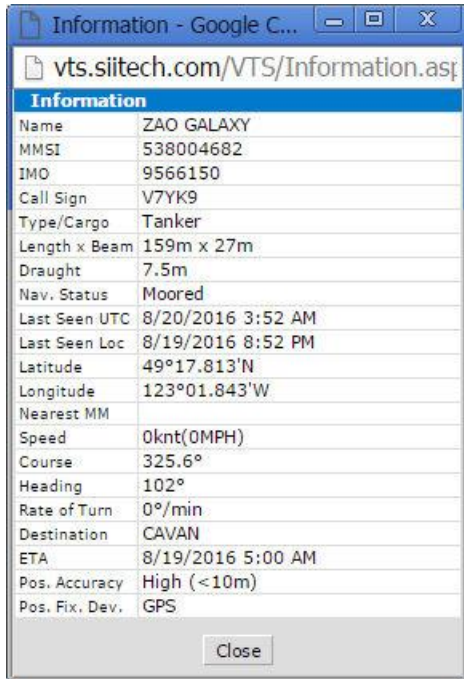

To view ship information, click the **Show Information Balloon** button  in the toolbar. Left-click a specific ship. The selected ship will turn red, and a balloon will appear over the ship in the map view showing its data. You can deactivate the information balloons at any time by deselecting the **Show Information Balloon** button  in the toolbar.

The screenshot displays the VTS/AVIEW web application interface. The browser address bar shows the URL: `vts.siitech.com/VTS/AView.aspx?code=110?lat=49.296919391071&lng=-123.030803`. The interface includes a toolbar with various navigation and tool icons, a search bar, and a list of ships on the left. The main map area shows the Port Metro Vancouver-Lynn area with a red ship icon representing the ZAO GALAXY. A detailed information panel is open over the ship, displaying the following data:

ZAO GALAXY	
MMSI/IMO:	538004682 / 9566150
Lat./Lng.:	49°17.814'N / 123°01.842'W
Nearest MM:	n/a
Type:	Tanker
Nav.Stat.:	Moored
Speed/Course:	0knt(0MPH) / 325.6°
Len./Beam/Drght:	159m / 27m / 8m
Dest.:	CAVAN
ETA:	8/19/2016 5:00 AM
UTC:	8/20/2016 3:46:07 AM
Received:	2 min ago

At the bottom of the map, a scale bar shows 1000 ft and 200 m. A red warning text reads "Not for Navigational Use". The bottom status bar displays coordinates: `49°17.813'N (49.296891) | 123°01.848'W (-123.030803)`, distance: `Dist:0.00NM(5m)`, bearing: `Brng:159.8°(159.8°)`, CPA: `CPA:0.00NM(1m)`, and TCPA: `TCPA:0.00`. Copyright information at the bottom reads: `© 2011 SiiTech Inc. All rights reserved. | Legal Information | Contact Us`.

To view ship data in a separate window, select a ship and click the **Show Information Panel** button  in the toolbar.

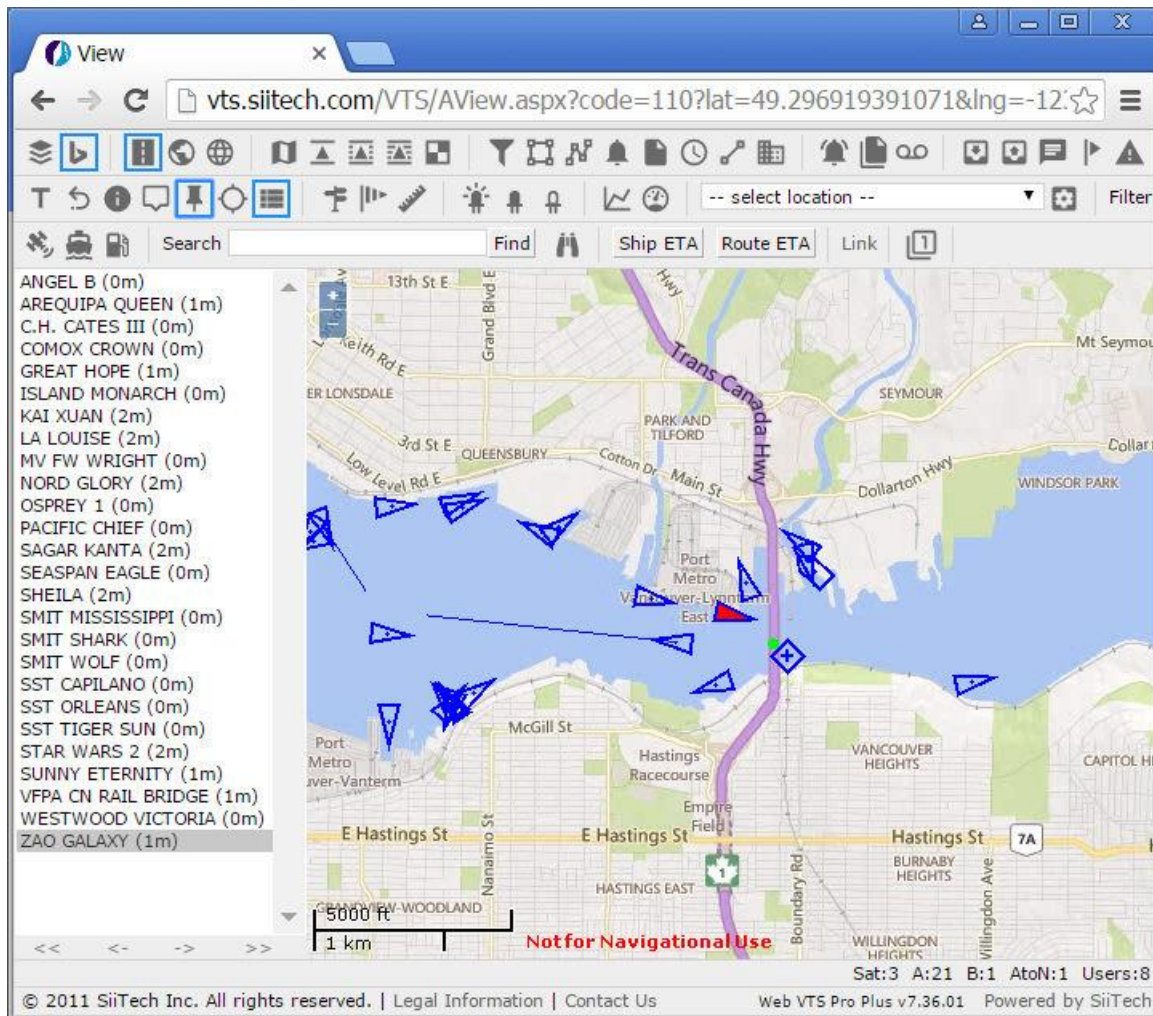

The screenshot shows a web browser window titled "Information - Google C...". The address bar contains "vts.siiitech.com/VTS/Information.asp". The main content is a table with a blue header "Information". The table lists various ship details:

Information	
Name	ZAO GALAXY
MMSI	538004682
IMO	9566150
Call Sign	V7YK9
Type/Cargo	Tanker
Length x Beam	159m x 27m
Draught	7.5m
Nav. Status	Moored
Last Seen UTC	8/20/2016 3:52 AM
Last Seen Loc	8/19/2016 8:52 PM
Latitude	49°17.813'N
Longitude	123°01.843'W
Nearest MM	
Speed	0knt(0MPH)
Course	325.6°
Heading	102°
Rate of Turn	0°/min
Destination	CAVAN
ETA	8/19/2016 5:00 AM
Pos. Accuracy	High (<10m)
Pos. Fix. Dev.	GPS

At the bottom of the table is a "Close" button.

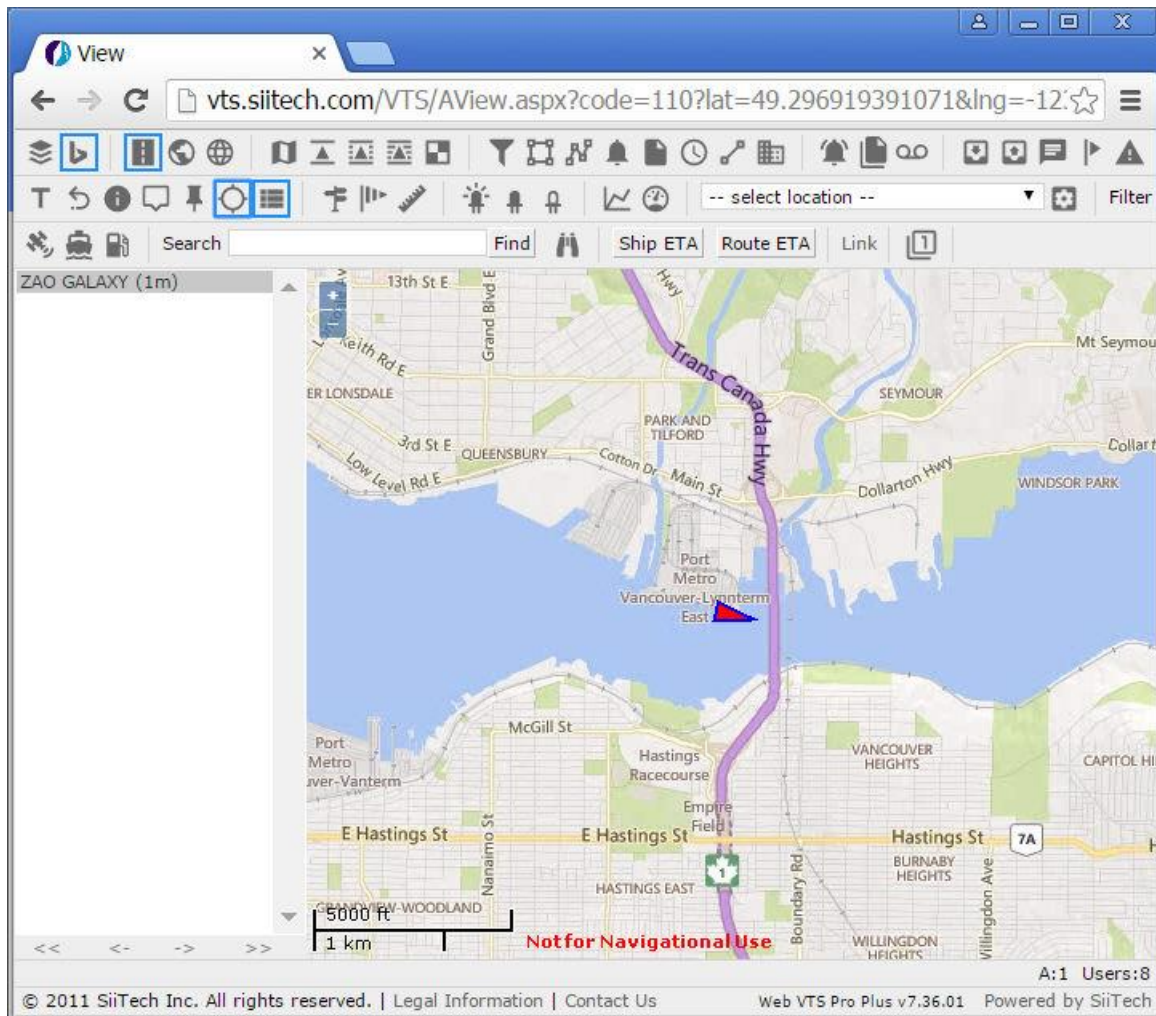

Follow Selected Ship

You can use WebVTS to automatically keep a specific ship in the center of the map view at all times. Click the desired ship (it will turn red when selected), then click the **Follow Selected Ship** button  in the toolbar.

Show Only Selected Ship

To show a selected ship only, click on the desired ship, then click the **Show Only Selected Ship** button  in the toolbar. WebVTS will automatically eliminate all other ships from the map view.

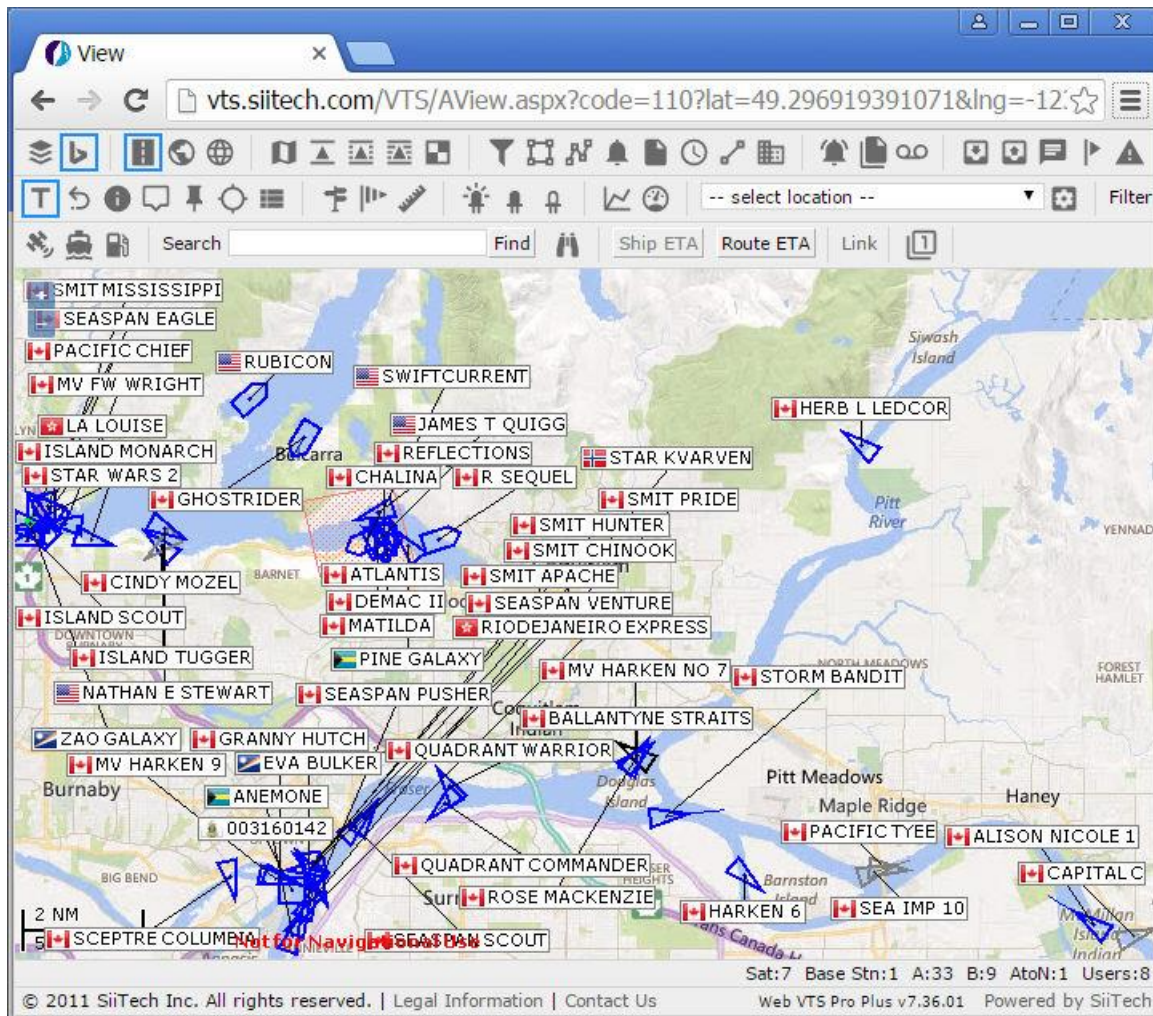

Show Ship Names

To display ship names, click the **Show Names** button **T** in the toolbar. The ship names will appear on the map view.

Note: Ship names will appear if there is enough free space to draw the names. Web VTS calculates this automatically.

If Web VTS has not received AIS message #5 (Ship static and voyage related data) from a certain ship, it will display an MMSI number instead of a name.

Displaying Charts/Maps

Web VTS allows charts and maps to be displayed in an efficient and sophisticated manner.

Individual Display:

- Bing Maps
- Open Street Maps;
- S-57 vector navigational charts (NOAA charts)
- BSB raster navigational charts
- ArcGIS Online Tiles

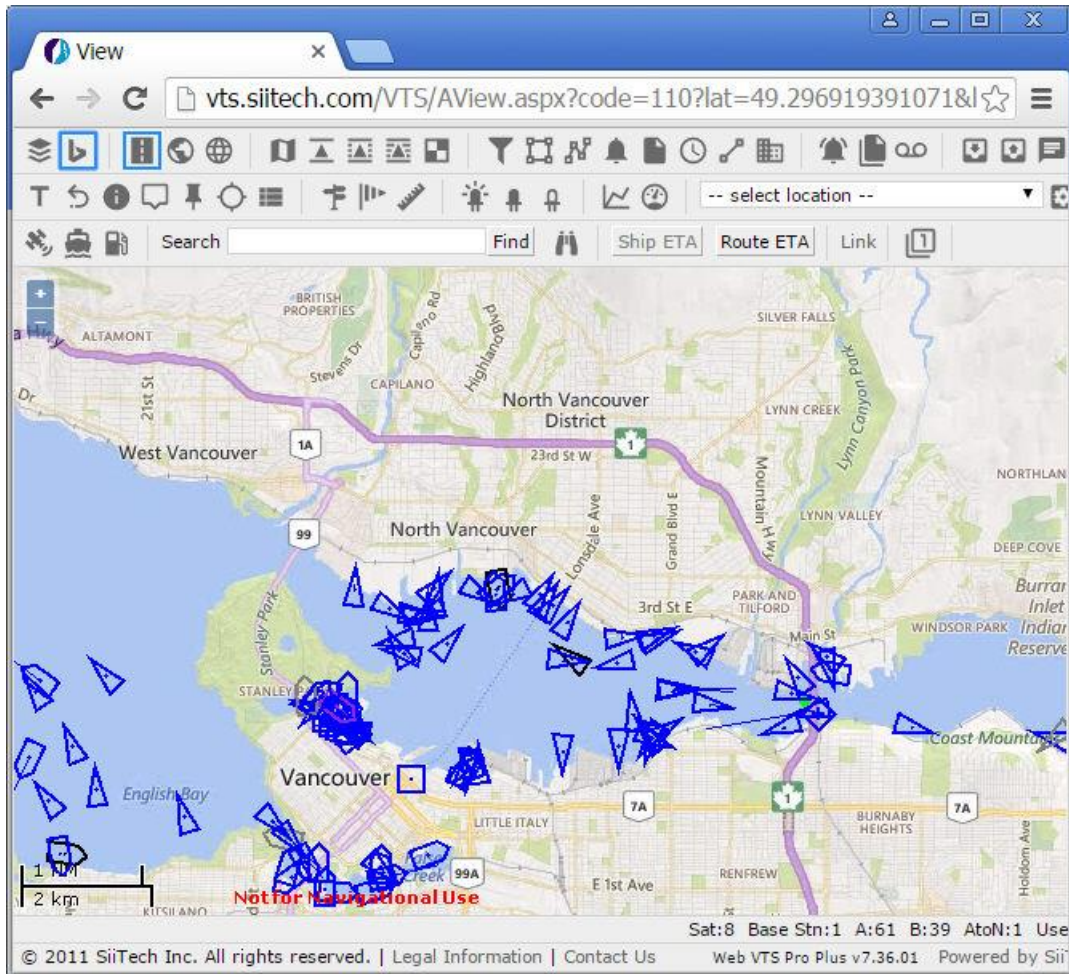

Combined Display:

- S-57 navigational charts over Bing Maps or Open Street Maps
- BSB raster navigational charts over S-57 vector navigational charts

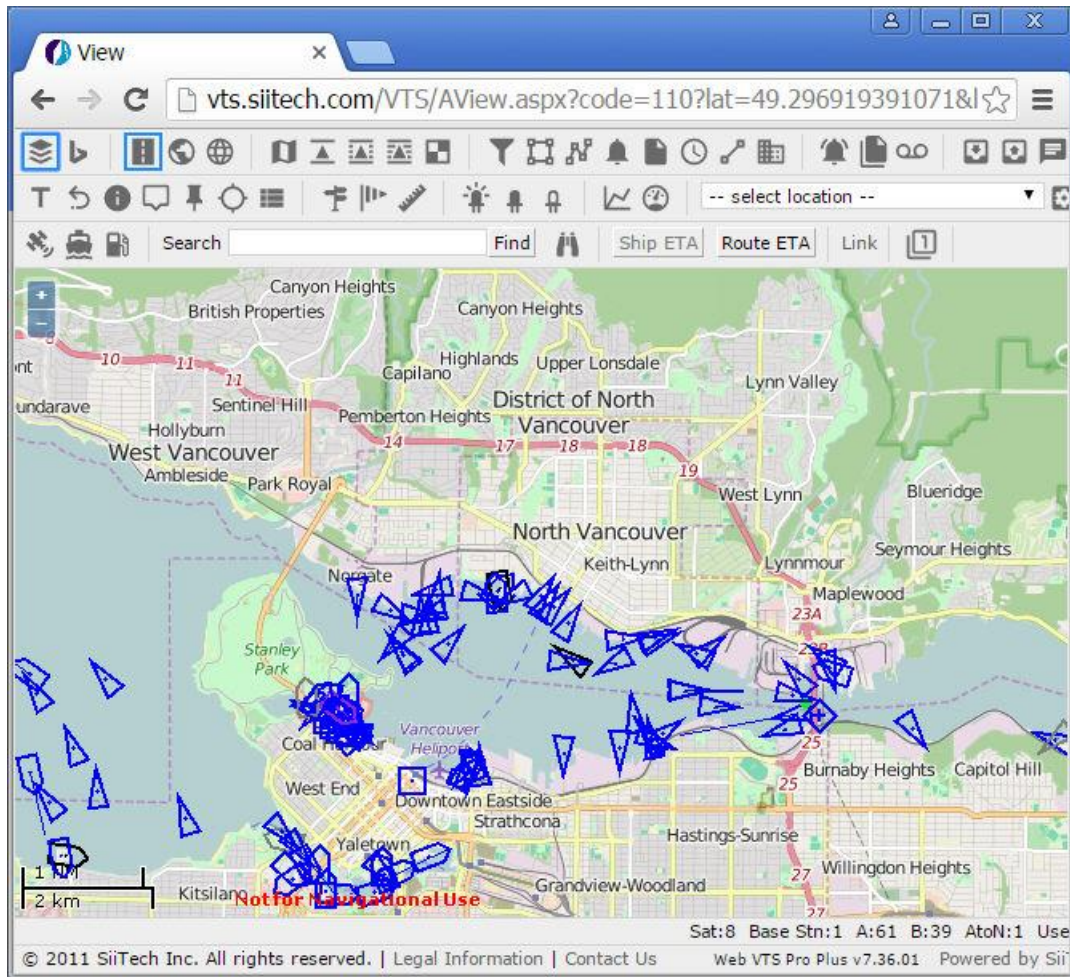

SiiTech Web VTS Manual

- BSB raster navigational charts over Bing Maps or Open Street Maps
- ArcGIS Online Tiles over any other maps or charts

To display Bing Maps, click the **Bing Maps** button  in the toolbar.

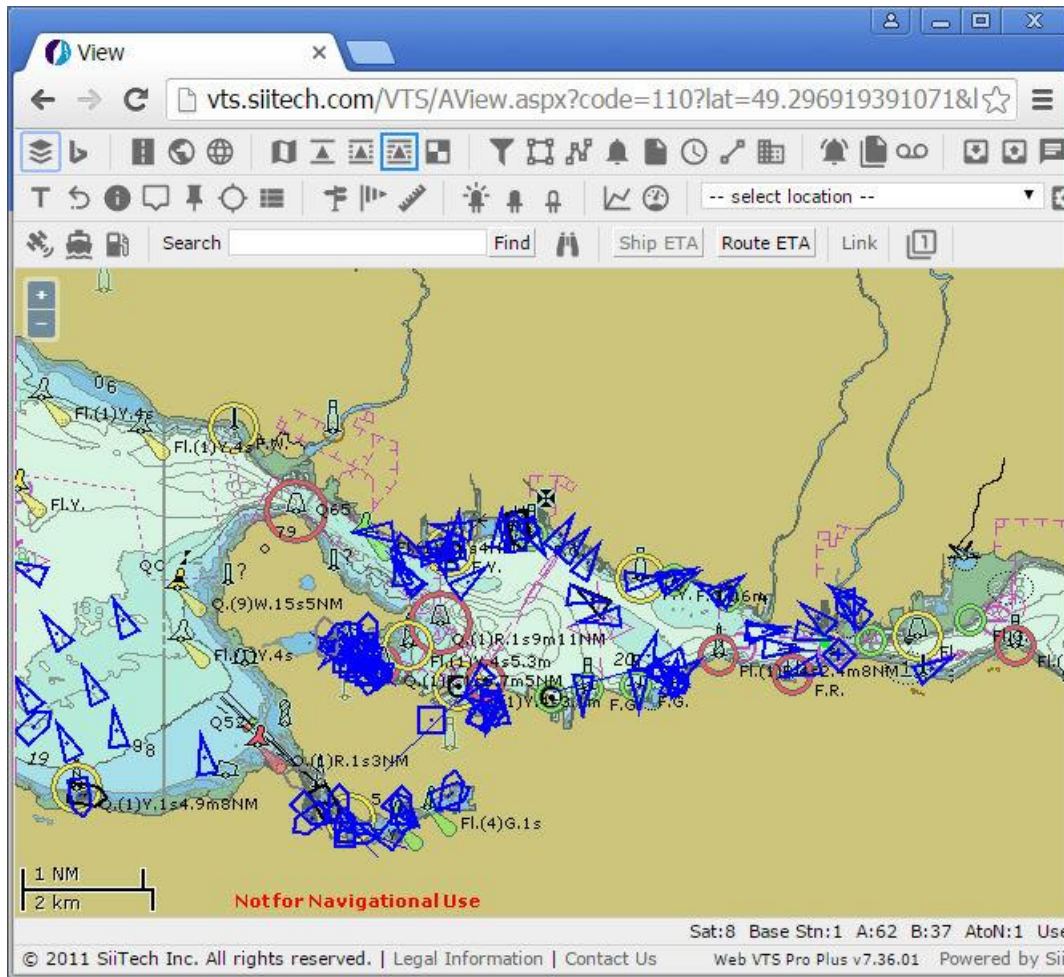

To display Open Street Maps, click the **Open Street Maps** button  in the toolbar.

Display Electronic Navigational Charts (S-57):

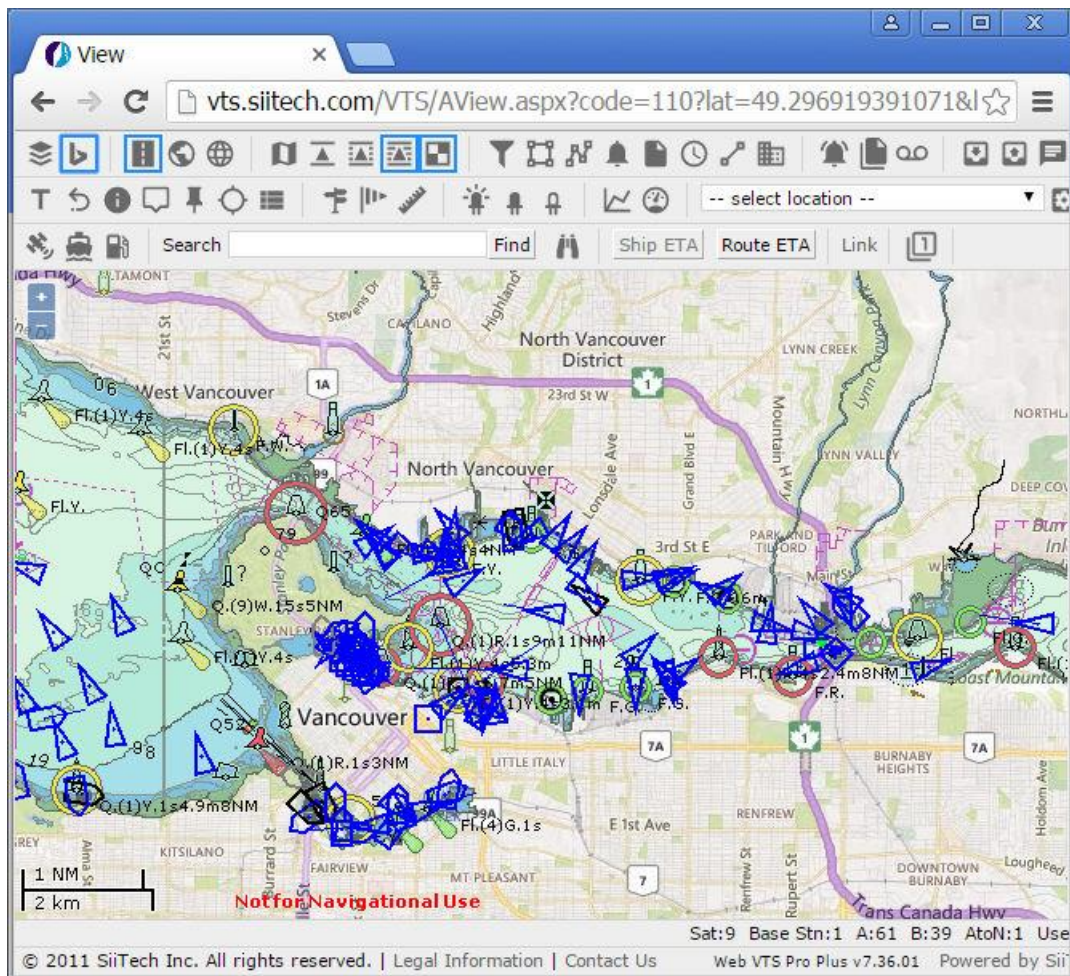

- Click **ENC Base**  to select Base presentation mode;
- Click **ENC Standard**  to select Standard presentation mode;
- Click **ENC All**  to select User-Defined presentation mode (pictured below).

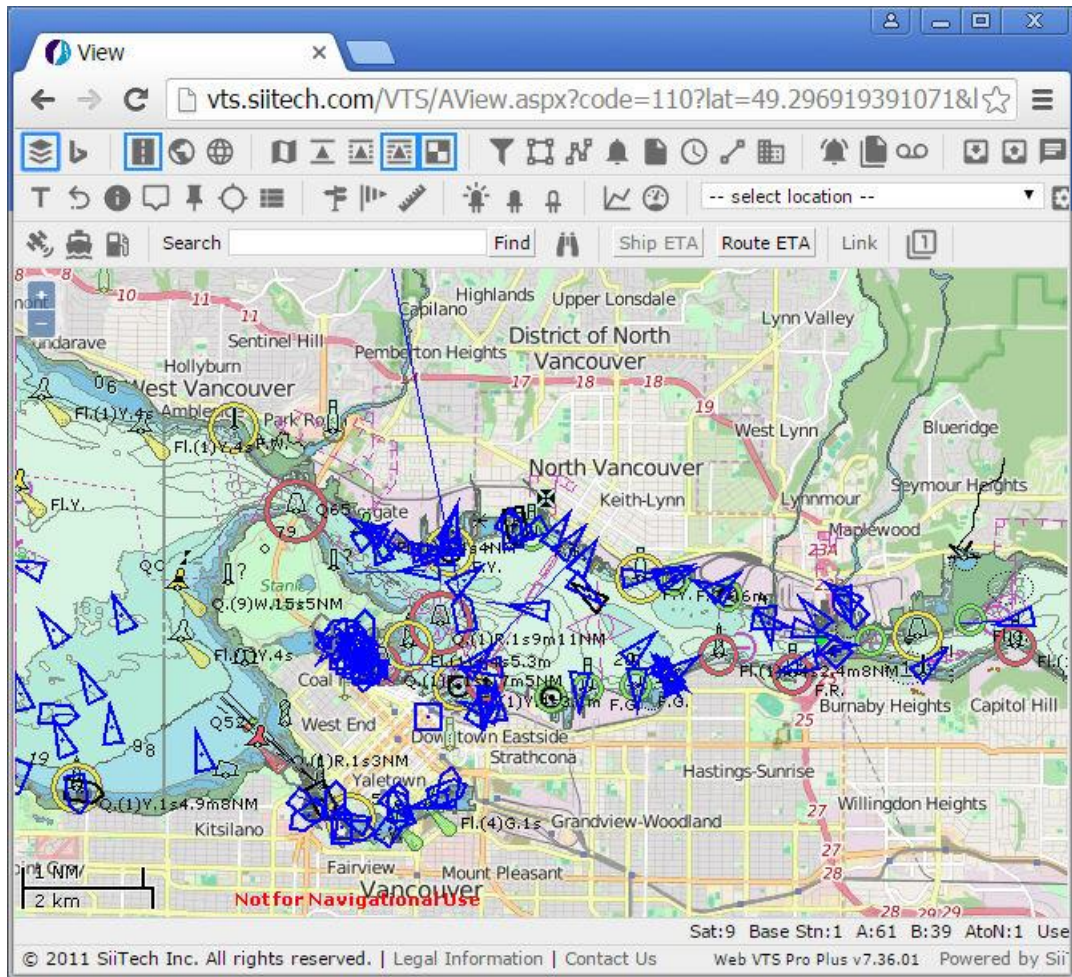

To display Raster Navigational Charts (BSB), click the **Raster Navigational Charts** button  in the toolbar.

Combined Display:

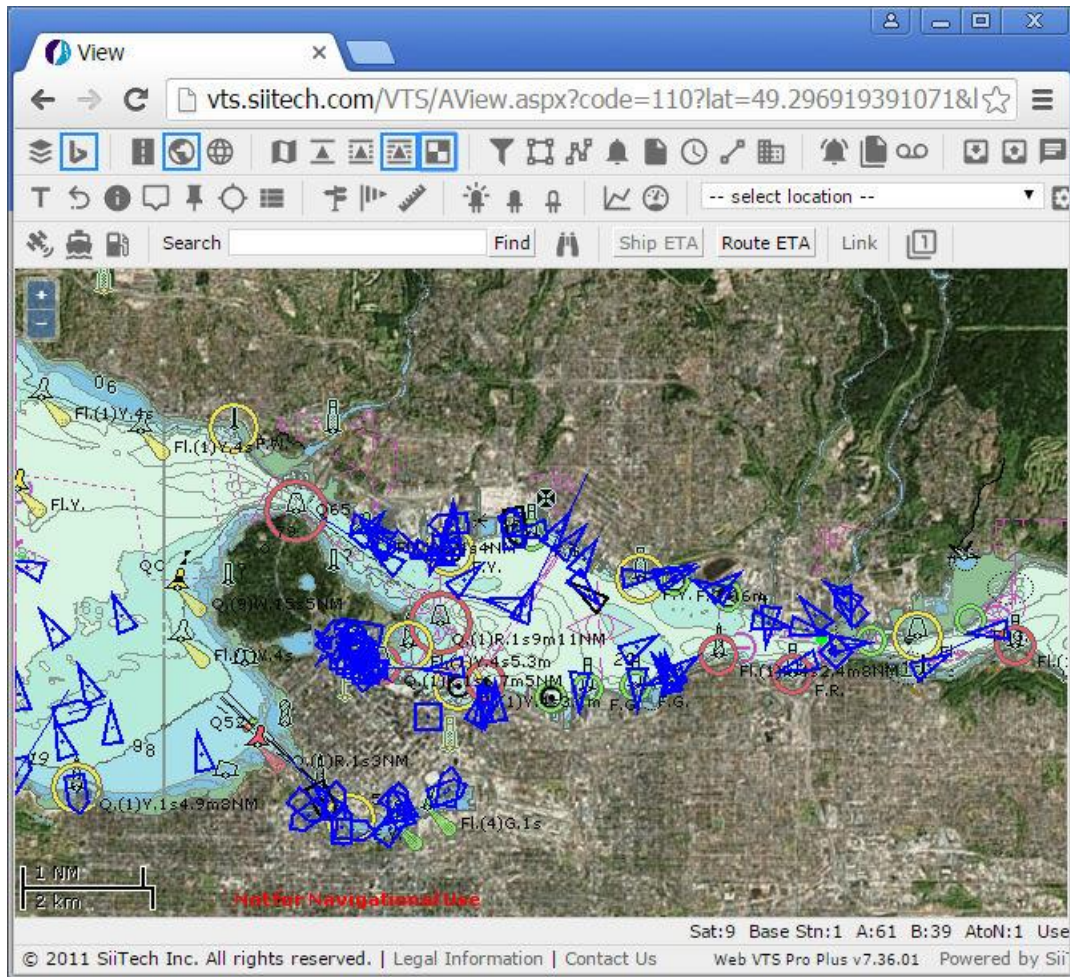

To display Bing Maps and S-57 navigational charts (water only) together, click the **Bing Maps** button , the **ENC All** button  (or any **ENC mode** of your choice), and the **Water Only** button  in the toolbar.

To display Open Street Maps and S-57 navigational charts (water only) together, click the **Open Street Maps** button , the **ENC All** button  (or any **ENC mode** of your choice), and the **Water Only** button  in the toolbar.

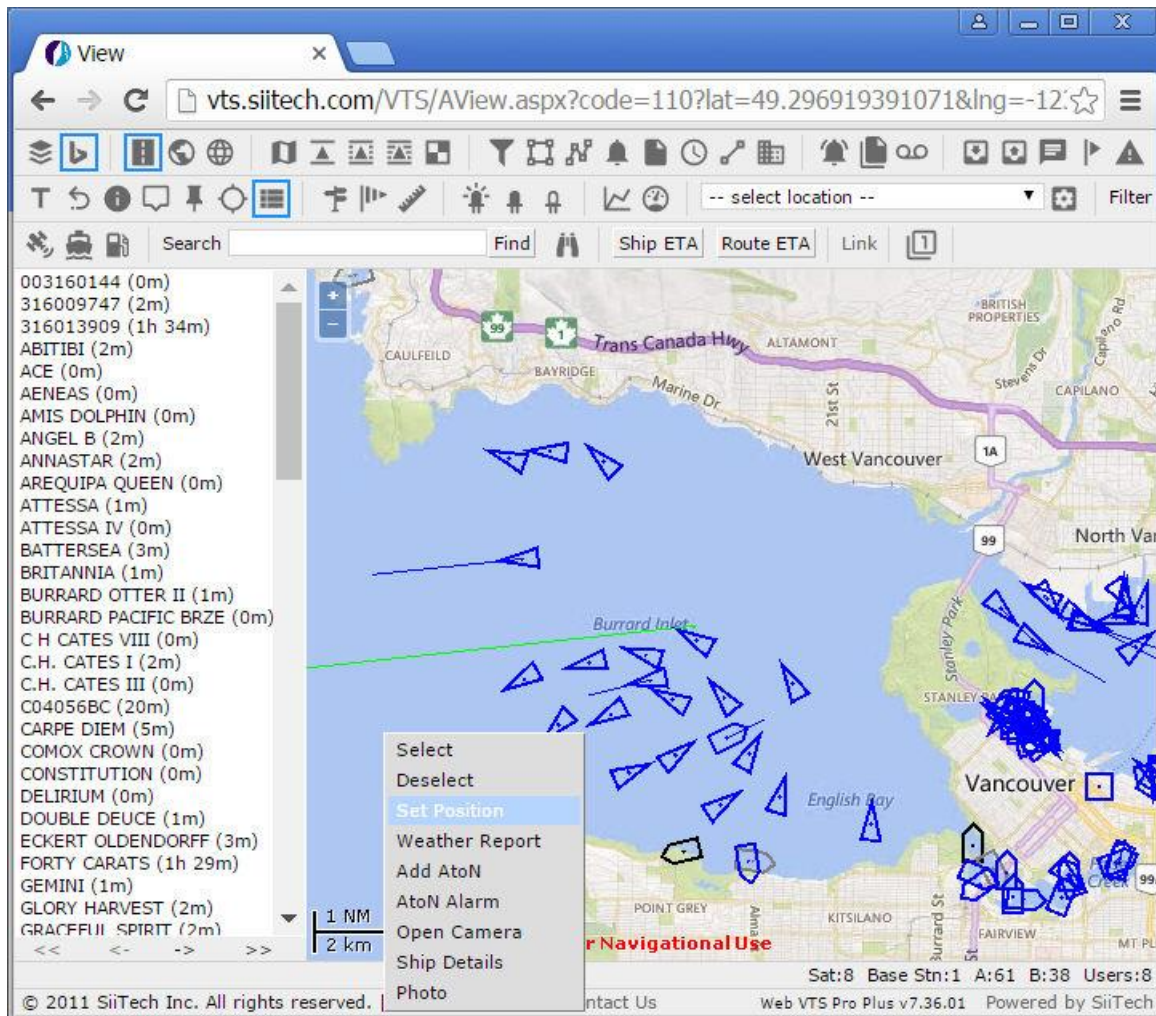

To display Bing Maps (satellite mode) and S-57 navigational charts (water only) together, click the **Bing Maps** button , the **Satellite** button , the **ENC All** button  (or any **ENC mode** of your choice), and the **Water Only** button  in the toolbar.

View Distance and Bearing

1. Right-click on your desired position on the map view. Select the **Set Position** option from the context menu.

SiiTech Web VTS Manual

2. A red dot will appear on the map at the point where you clicked.

The screenshot displays the VTS software interface. The browser address bar shows the URL: `vts.siitech.com/VTS/AView.aspx?code=110?lat=49.296919391071&lng=-12`. The toolbar contains various navigation and tool icons, including a search bar and buttons for 'Ship ETA', 'Route ETA', and 'Link'. On the left, a list of ships is displayed with their names and distances, such as '003160141 (0m)', 'ABITIBI (3m)', and 'JERICO RESCUE TITAN (20m)'. The main map area shows a geographical view of the Vancouver region, including Bowen Island, Horseshoe Bay, and West Vancouver. A red dot on the map indicates a set position, and a blue line shows a ship's path. The text 'Not for Navigational Use' is visible on the map. The bottom status bar shows 'Sat:6 Base Stn:2 A:45 B:40 Users:8' and '© 2011 SiiTech Inc. All rights reserved. | Legal Information | Contact Us'.

3. Select your ship to see distance and bearing to the set position. Click on the **Information Panel** button **i** in the toolbar to view the distance and bearing.

The screenshot displays the SiiTech Web VTS interface. On the left, an 'Information' panel provides details for the vessel SAKIZAYA CHAMPION. The main area features a map of Vancouver, British Columbia, with a red dot indicating the vessel's current position in the water. The map includes labels for various locations such as Bowen Island, Horseshoe Bay, UBC, and North Vancouver. A scale bar at the bottom left shows 2 NM and 5 km. The interface also includes a search bar, navigation tools, and a status bar at the bottom.

Information	
Name	SAKIZAYA CHAMPION

Web VTS Pro Plus v7.36.01 Powered by SiiTech

4. To remove the red dot, right-click on it and select the **Remove Position** option from the context menu.

The screenshot displays a web browser window with the URL `vts.siitech.com/VTS/AView.aspx?code=110?lat=49.296919391071&lng=-12`. The interface includes a toolbar with various navigation and tool icons, a search bar, and a list of ship names on the left side. A map of Vancouver is shown with numerous blue ship icons. A context menu is open over one of the icons, listing options such as 'Select', 'Deselect', 'Remove Position', 'Weather Report', 'Add AtoN', 'AtoN Alarm', 'Open Camera', 'Ship Details', and 'Photo'. A scale bar at the bottom indicates 2 NM and 5 km. A red warning text 'Not for Navigational Use' is visible on the map. The footer contains copyright information for SiiTech Inc. and technical details like 'Web VTS Pro Plus v7.36.01' and 'Powered by SiiTech'.

Area. Set the area of monitored data. Select "Screen" from the **Area** drop-down list to view ship information for the ships which are visible in your current map view. Select "All" to view ship information for all ships in the system.

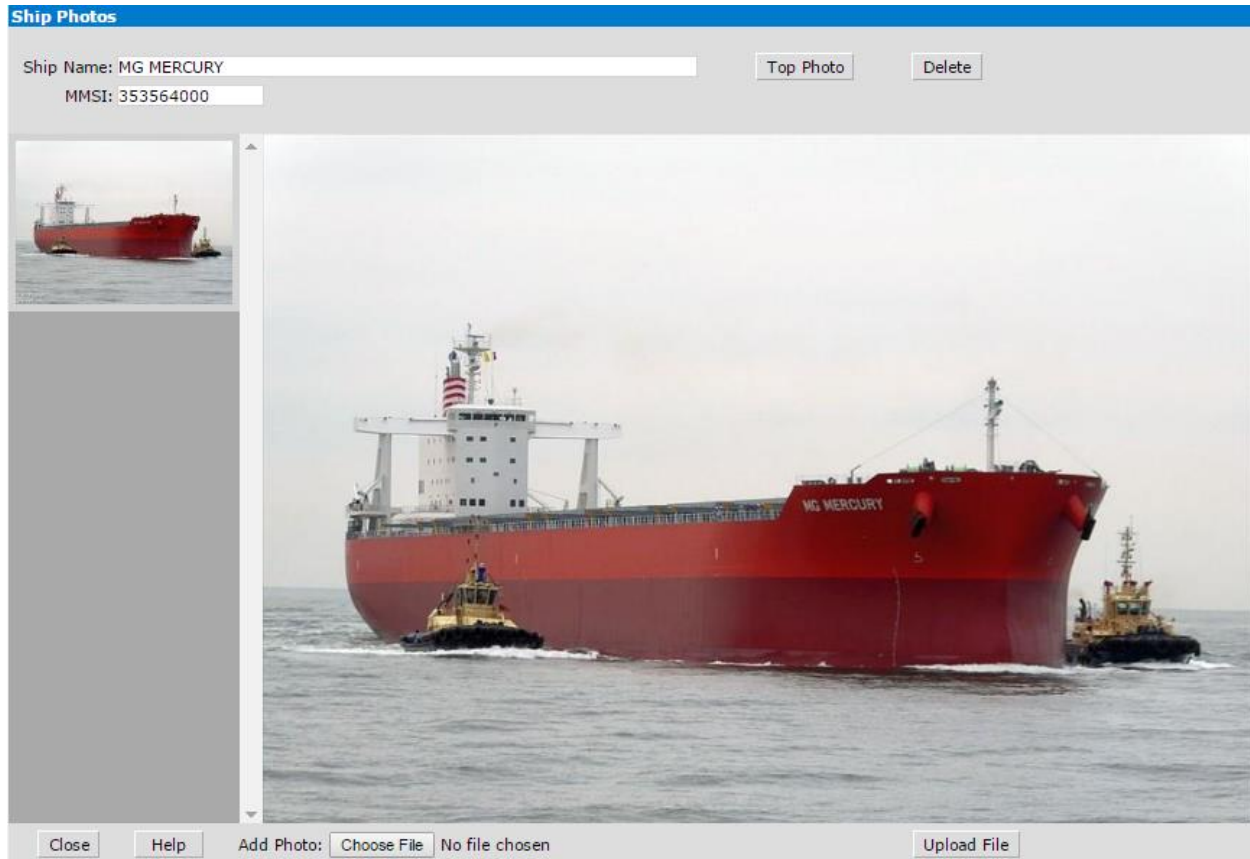

Time Span. Set the time span of monitored data. Use the **Time Span** drop-down list to select how far back in time you want to view ship information.

Refresh every ___ sec. Use this field to type how often you would like to check for recently sent messages and click the **Set** button to apply your changes.

Filter Ships By. Use the **Name**, **MMSI**, or **IMO** fields to list specific ships only. Type ship name or MMSI into the appropriate field and click the **Apply** button. *Note:* You may use only part of the name, MMSI number, or IMO number for the search.

Click the binocular icon  to see the selected ship centered on the map view. If there is no real-time data for this ship, the system will automatically open the **History Replay** window, switch to **History Replay** mode, and show you the ship's last reported position.

Click the camera icon  to view the ship's photo.

Ship Details List

Click the **Ship Details** button  to open the **Ship Details List** window.

In the **Ship Details List** window, you may view technical data about any ship in the database. This information is manually entered into the system by the administrator or user(s).

Ship Photos

To add or edit ship photos:

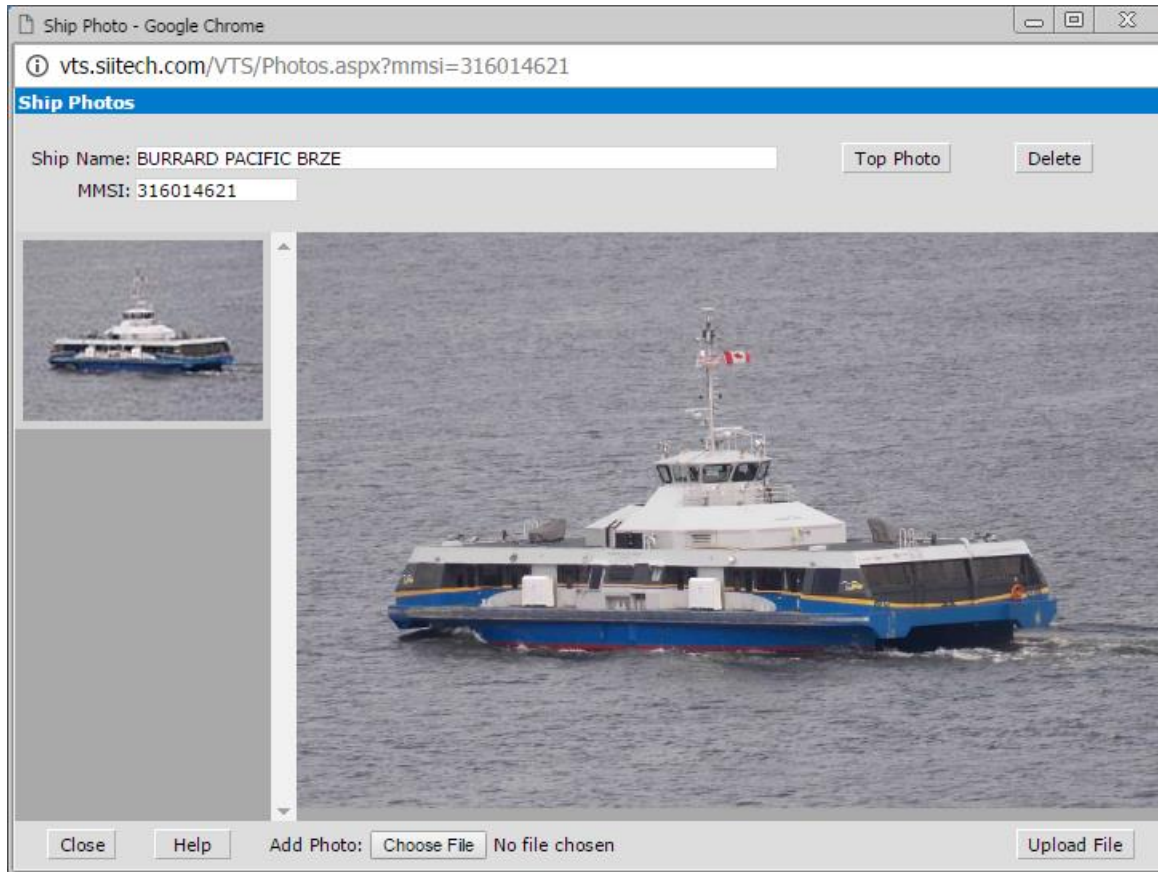

1. Right-click on the ship and select **Photo** from the list.

After selecting **Photo** from the list, you will see the **Ship Photos** window.

To add a photo, click the **Choose File** button to select an image, and then click the **Upload File** button to upload it to the server.

Search Ship on Map

To find the ship on the map, enter the ship name or MMSI number or call sign into the **Search** box and click the **Find** button. If the ship is still visible on the map, Web VTS will locate the ship and center the map on the ship's last reported position.

Search Ship in Database

To find the ship in the database, click the **Ship List** button  in the toolbar to open the **Ship List** window.

In the **Ship List** window, enter the ship name or MMSI number or IMO number into the **Filter Ships By** field(s) and click the **Apply Filter** button.

For example, typing "Burrard" into the **Name** field will return two ships containing "Burrard" in their names.

Ship List - Google Chrome
vts.siitech.com/VTS/ShipList.aspx

Ship List

Close Help

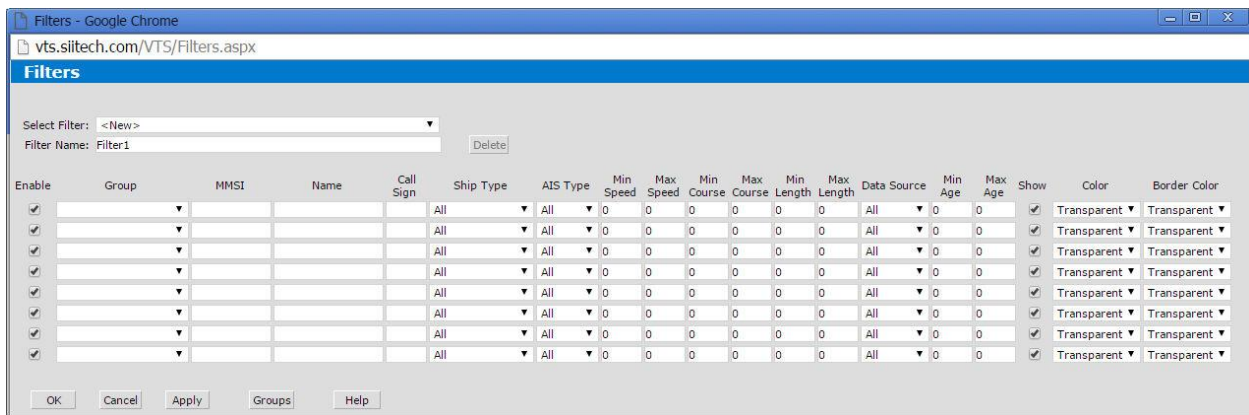

If the search results return your desired ship, click the **Show on Chart** button on the far left side of the table. If the ship is still visible on the map, Web VTS will locate the ship and center the map on the ship's last reported position. You will see the ship's name highlighted in the ship names column on the left side of the map.

Filters

Filter Designer

The **Filter Designer** is a tool that allows users to select which ships (AIS targets) to display.

Click the **Filter Designer** button  in the toolbar to open the **Filter Designer** in a new window.

Note: the **Filter Designer** contains several identical lines. Each of these lines represents a condition of the filter. The first line has the highest priority.

Select Filter. Select any existing filter or create a new one from the drop-down menu.

Filter Name. Use this box to display and edit the filter name (by default the program names each new filter “FilterN”, where N is the first available number).

Delete. Delete any existing filter.

Enable. Activate a condition.

Group. Select a predefined group.

MMSI. Enter the MMSI number of the ship.

Name. Enter the name of the ship.

Call Sign. Enter the call sign of the ship.

Ship Type. Select ship type or specify important information (e.g. dangerous cargo).

AIS Type. Select AIS targets based on AIS type (e.g. Base Station, Class A, Class B, AtoN, SAR Aircraft).

Min/Max Speed. Minimum and maximum speed of the ship.

Min/Max Course. Specify minimum and maximum values of course interval for each ship.

Min/Max Length. Minimum and maximum length of the ship.

Data Source. Signal source (e.g. satellite, land station, LRIT).

Show. Check this box to show the selected ships. Uncheck the box to hide selected ships.

Color/Border. Choose desired color from the drop-down list.

OK. Save changes and return to the main view.

Cancel. Cancel all changes and return to the main view.

Apply. Save changes and leave the **Filter Designer** window open.

Groups. Open **Group Designer** panel and create ship group(s).

Help. Open Web VTS User's Guide.

Creating a Group

To build a group of ships click the **Groups** button. You will see the **Groups Designer** panel.

The screenshot shows a web browser window titled "Groups - Google Chrome" with the URL "vts.siitech.com/VTS/Groups.aspx". The page has a blue header with the word "Groups". Below the header, there is a "Select Group:" dropdown menu with "<New>" selected. Below that is a "Group Name:" text input field containing "Group2" and a "Delete" button. The main area contains three large text input fields for "MMSI", "Name", and "Call Sign", each preceded by an "OR" label. The "MMSI" field contains "345678123" and the "Name" field contains "SHIP_NAME". At the bottom of the page are four buttons: "OK", "Cancel", "Apply", and "Help".

Select Group. Select any existing filter or create a new one from the drop-down menu.

Group Name. Use this box to display and edit the group name (by default the program names each new filter "GroupN", where N is the first available number).

Delete. Delete any existing group.

MMSI. Specify MMSI numbers of all ships in the group.

Name. Specify names of all ships in the group.

Call Sign. Specify call signs of all ships in the group.

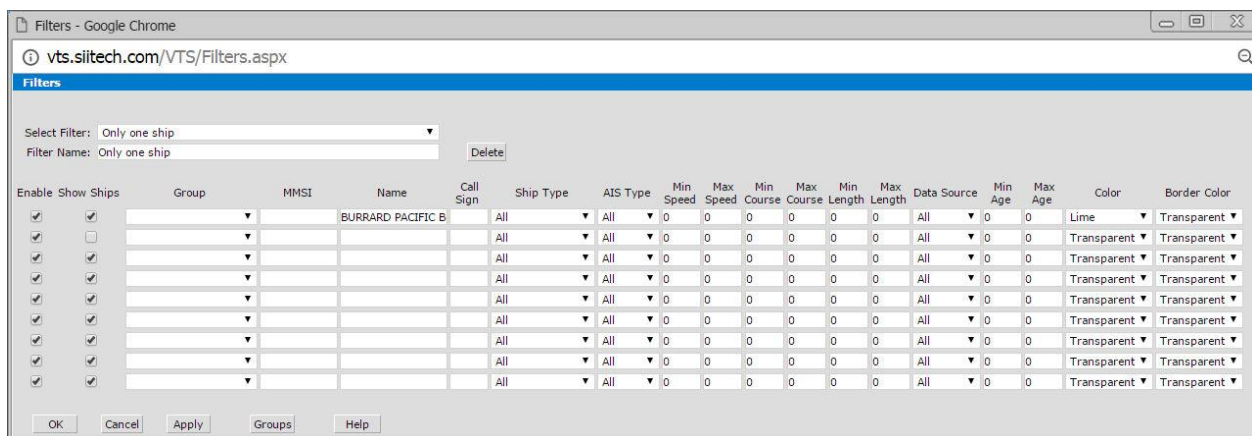

One Ship Only Filter

This filter will display only the BURRARD PACIFIC BRZE ship and hide all others.

- Click the **Filter Designer** button  to open the **Filter Designer** window.
- Select "<New>" from the **Select Filter** list.
- Type "Only one ship" instead of "FilterN" (where "N" is the first available number) in the **Filter Name** field.

Note: The **Filter Designer** allows users to create as many filter conditions as necessary. Each row represents one condition. The rows are arranged by order of priority, with the highest priority given to the first condition.

In this example, we will outline the settings required to display only BURRARD PACIFIC BRZE on the map. Begin with the **first row**.

Enable	Show Ships	Group	MMSI	Name	Call Sign	Ship Type	AIS Type	Min Speed	Max Speed	Min Course	Max Course	Min Length	Max Length	Data Source	Min Age	Max Age	Color	Border Color
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>			BURRARD PACIFIC B		All	All	0	0	0	0	0	0	All	0	0	Lime	Transparent
<input checked="" type="checkbox"/>	<input type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent

- Leave the **Enable** box checked.
- Leave the **Group** option blank.
- Leave the **MMSI** field blank.
- Type "BURRARD PACIFIC BRZE" into the **Name** field.
- Leave the **Call Sign** field blank.
- Leave "All" selected in the **Ship Type** drop-down list.
- Leave "All" selected in the **AIS Type** drop-down list.
- Leave "0" in the **Min Speed**, **Max Speed**, **Min Length** and **Max Length** fields.
- Leave the **Show Ships** box checked.
- Select "Lime" from the **Color** drop-down list.
- Leave "Transparent" in the **Border Color** drop-down list.

Use the **second row** to create a filter that will enable you to hide all other ships on the map.

- Leave the **Enable** box checked.
- Uncheck the **Show Ships** box.

Click the **Apply** button to save the "Only one ship" filter. Click **OK** to return to the main view.

Before applying the filter

The screenshot shows the VTS software interface. The browser address bar displays the URL: `vts.sitech.com/VTS/AView.aspx?code=106%3flat%3d30.5944868301099&lng=-87.85594175`. The interface includes a search bar, a filter dropdown menu, and a list of ship names on the left side. The map shows the Fraser River area with many ship icons. The filter dropdown menu is open, showing the following list of ship names:

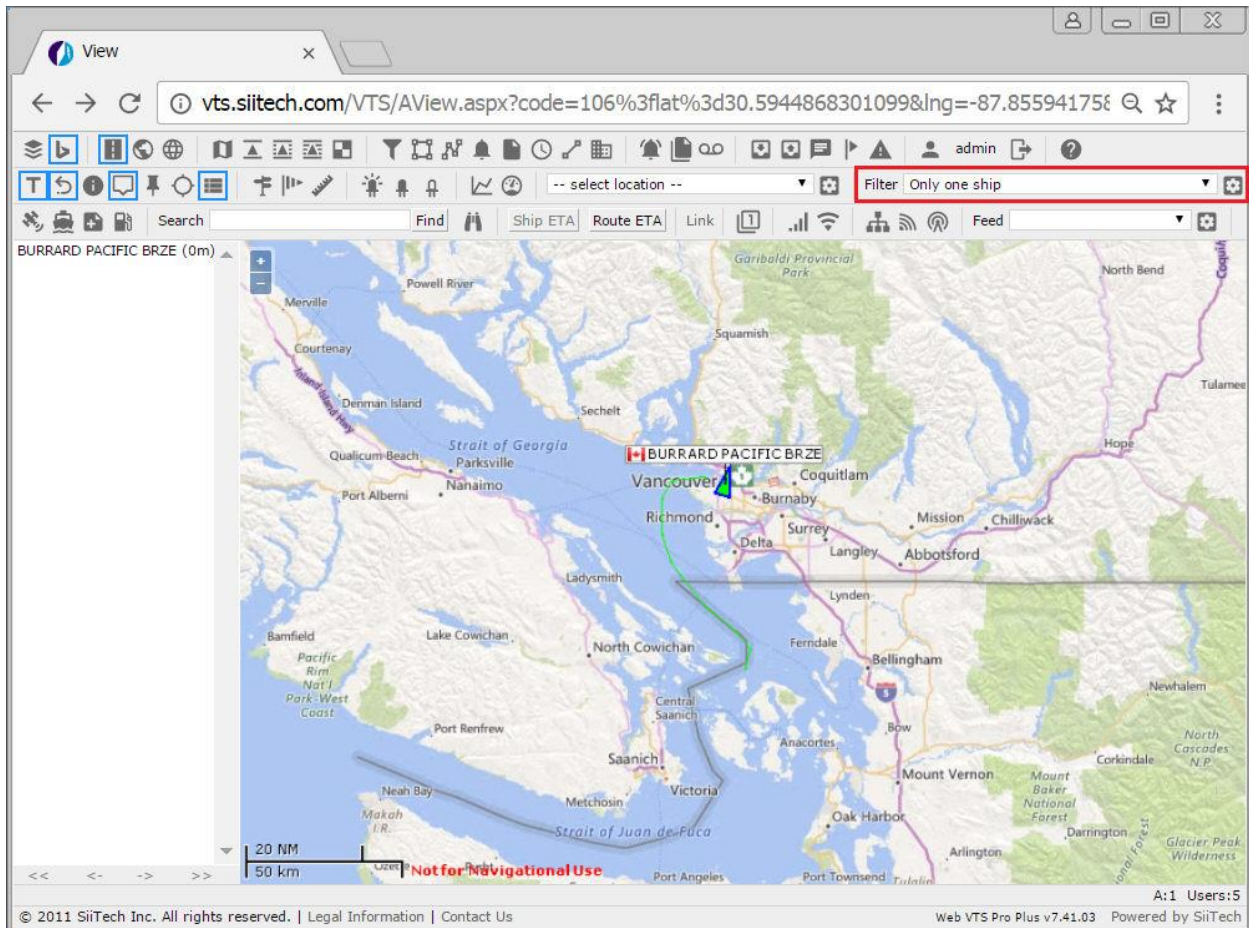

- 003160143 (0m)
- 003160144 (0m)
- 151 WATER STREET (3m)
- 316011736 (1h 30m)

After applying the filter

Select "Only one ship" from the **Filter** drop-down list to apply the filter. This is what the map will display as a result:

Group of Ships Filter

This filter will display a specific group of ships and hide all others. Before applying the filter, we need to prepare a predefined ship group. In this example, we will display "BC Ferries".

1. Create a group (Seaspan Tugs)

The screenshot shows the 'Groups' dialog box. At the top, there is a 'Select Group:' dropdown menu with 'Seaspan Tugs' selected. Below it is a 'Group Name:' text field containing 'Seaspan Tugs' and a 'Delete' button. The main area is divided into three columns: 'MMSI', 'OR', and 'Name', followed by another 'OR' and 'Call Sign'. The 'Name' column contains a list of ship names: 'QUEEN OF BURNABY', 'QUEEN OF COWICHAN', 'QUEEN OF ESQUIMALT', 'QUEEN OF NANAIMO', 'QUEEN OF NEW WEST', 'QUEEN OF OAK BAY', 'QUEEN OF SURREY', and 'QUEEN OF VANCOUVER'. At the bottom, there are buttons for 'OK', 'Cancel', 'Apply', and 'Help'.

- Click the **Filter Designer** button  to open the **Filter Designer**.
- Click the **Groups** button to open the **Group Designer**.
- Select "<New>" from the **Select Group** drop-down list.
- Type "Seaspan Tugs" into the **Group Name** field.
- Type the following ship names into the **Name** field: "QUEEN OF BURNABY", "QUEEN OF COWICHAN", "QUEEN OF ESQUIMALT", "QUEEN OF NANAIMO", "QUEEN OF NEW WEST", "QUEEN OF OAK BAY", "QUEEN OF SURREY", "QUEEN OF VANCOUVER".
Note: Press the enter or return key after each name.
- Click **OK** to save the group and return to the **Filter Designer** window.

2. Create a filter (BC Ferries)

The screenshot shows the 'Filters' dialog box. At the top, there is a 'Select Filter:' dropdown menu with 'BC Ferries' selected. Below it is a 'Filter Name:' text field containing 'BC Ferries' and a 'Delete' button. The main area is a table with the following columns: Enable, Show Ships, Group, MMSI, Name, Call Sign, Ship Type, AIS Type, Min Speed, Max Speed, Min Course, Max Course, Min Length, Max Length, Data Source, Min Age, Max Age, Color, and Border Color. The table contains 10 rows of filter rules for the 'Seaspan Tugs' group. At the bottom, there are buttons for 'OK', 'Cancel', 'Apply', 'Groups', and 'Help'.

Enable	Show Ships	Group	MMSI	Name	Call Sign	Ship Type	AIS Type	Min Speed	Max Speed	Min Course	Max Course	Min Length	Max Length	Data Source	Min Age	Max Age	Color	Border Color
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Seaspan Tugs				All	All	0	0	0	0	0	0	All	0	0	Light Coral	Magenta
<input checked="" type="checkbox"/>	<input type="checkbox"/>		*			All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent
<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>					All	All	0	0	0	0	0	0	All	0	0	Transparent	Transparent

Use the first row to edit the parameters of the ship group you would like to DISPLAY on the map (i.e. all ships *inclusive* to the group "Seaspan Tugs").

- Select "<New>" from the **Select Filter** list.
- Type "BC Ferries" into the **Filter Name** field.
- Leave the **Enable** box checked.
- Select "BC Ferries" from the **Group** drop-down list.
- Leave the **MMSI** field blank.
- Leave the **Name** field blank.
- Leave the **Call Sign** field blank.
- Leave "All" selected in the **Ship Type** drop-down list.
- Leave "All" selected in the **AIS Type** drop-down list.
- Leave the **Show Ships** box checked.
- Select "Light Coral" from the **Color** drop-down list.
- Select "Magenta" from the **Border Color** drop-down list.

Use the second row to edit the parameters of the ship group you would like to HIDE on the map (i.e. all other ships *exclusive* to "Seaspan Tugs").

- Leave the **Enable** box checked.
- Leave the **Group** field blank.
- Type the asterisk symbol * in the **MMSI** field (*Note: * = "all ships"*).
- Leave the **Name** field blank.
- Leave the **Call Sign** field blank.
- Leave "All" selected in the **Ship Type** drop-down list.
- Leave "All" selected in the **AIS Type** drop-down list.
- Uncheck the **Show Ships** box.
- Leave "Transparent" selected in the **Color** drop-down list.
- Leave "Transparent" selected in the **Border Color** drop-down list.

3. Apply the filter

Click the **Apply** button to save the "BC Ferries" filter. Click **OK** to return to the main view.

Select "BC Ferries" from the **Filter** drop-down list. Here is a view of the map with the filter applied:

The screenshot shows a web browser window displaying a map-based application. The address bar shows the URL: `vts.sitech.com/VTS/AView.aspx?lat=-23.8054496121088&lng=-44.791259765625&zoom=88`. The interface includes a search bar with the text "Find", "Ship ETA", "Route ETA", and "Link". On the left side, there is a list of routes: "QUEEN OF BURNABY (0m)", "QUEEN OF COWICHAN (0m)", "QUEEN OF NANAIMO (0m)", "QUEEN OF NEW WEST (0m)", "QUEEN OF OAK BAY (0m)", and "QUEEN OF SURREY (0m)". The main area is a map of the Pacific Northwest region, showing various cities and water bodies. A red box highlights the "Filter BC Ferries" dropdown menu in the top right corner, with a red arrow pointing to it. The footer contains the text: "© 2011 SiiTech Inc. All rights reserved. | Legal Information | Contact Us" and "Web VTS Pro Plus v7.35.01 Powered by SiiTech".

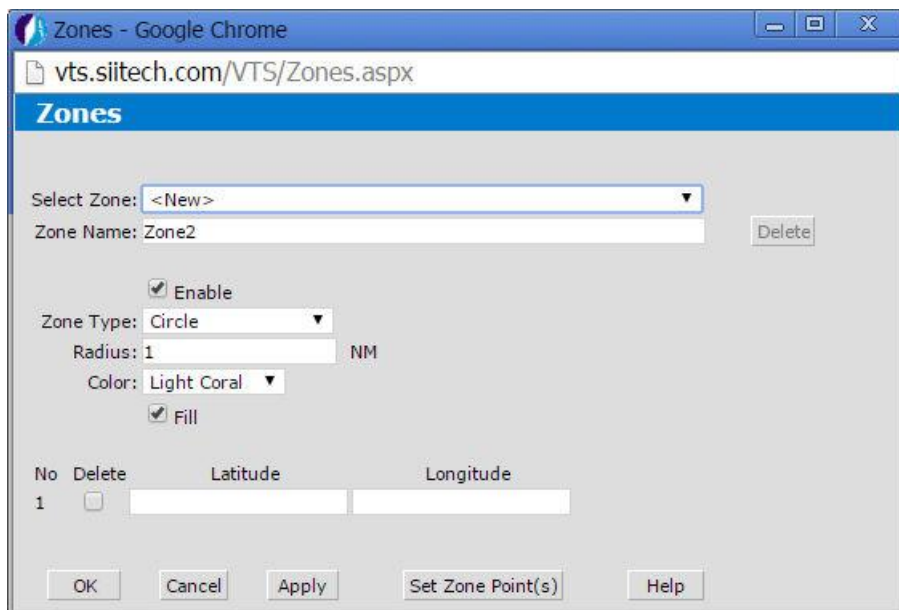

Zones

Zone Designer

The **Zone Designer** allows users to draw any precise zone on a map or chart. It is a powerful tool for the visualization of a desired monitoring zone. It can also provide a basis for reports.

The **Zone Designer** can be used to create two types of zones (**Circle** and **Polygon**) and two types of lines (**Line L** and **Line R**).

Click the **Zone Designer** button  in the toolbar to open the **Zone Designer** window.

Select Zone. Select an existing zone or create a new zone from the drop-down list.

Zone Name. Use this box to display and edit the zone name (by default the program uses "ZoneN" for every new zone, where N is the first available number).

Delete. Delete any existing zone.

Enable. Check this box to enable a zone.

Zone Type. Select a type of zone (Circle/Polygon) or a type of line (Line L/Line R) from the drop-down list.

Radius. Enter the radius length in Nautical Miles (NM). *Note:* this option is only available for the circle zone.

Color. Select a predefined color from the drop-down list.

Fill. Check this box to shade the zone's area on the map.

Latitude and Longitude. Enter the zone's coordinates. For circle zones, this is the center of the circle. Tip: you may also use the **Add Points** button.

Delete. Check this box to select the latitude and longitude pair(s) you wish to remove. Click the **Apply** button to delete.

Set Zone Point(s). Create zone points by clicking on the map.

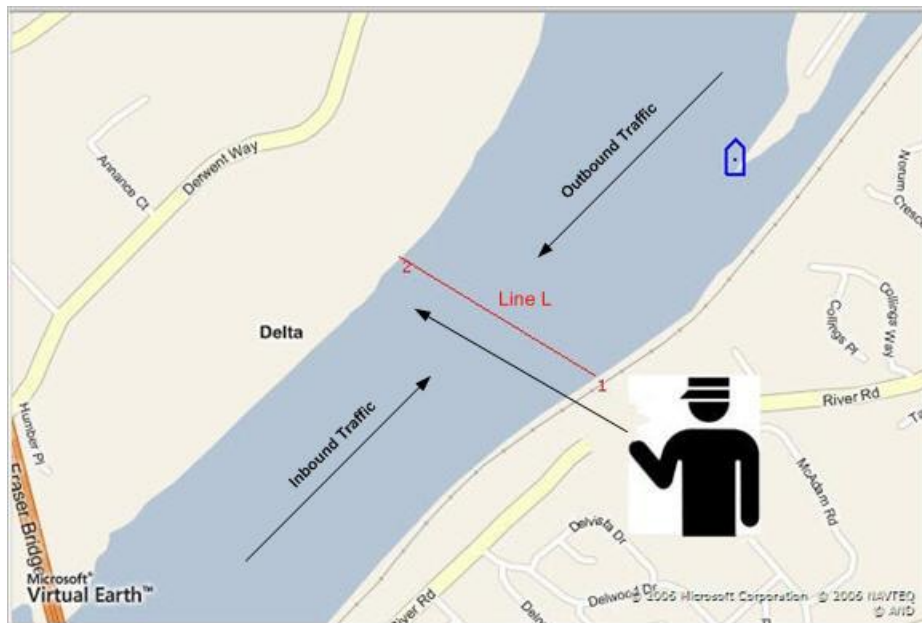

OK. Save changes and return to the main view.

Cancel. Cancel all changes and return to the main view.

Apply. Save changes and keep the **Zone Designer** window open.

The **Zone Designer** allows users to create two types of lines, "Line L" and "Line R", to distinguish outbound traffic from inbound traffic.

- If you draw "Line L", then all inbound traffic will be from your left hand side.
- If you draw "Line R" then all inbound traffic will be from your right hand side.
- *Note:* To choose the right type of line, imagine that you are looking along the line from the beginning of the line to the endpoint. The beginning of the line is your click on the chart and the endpoint is your second click. Refer to the pictures below.

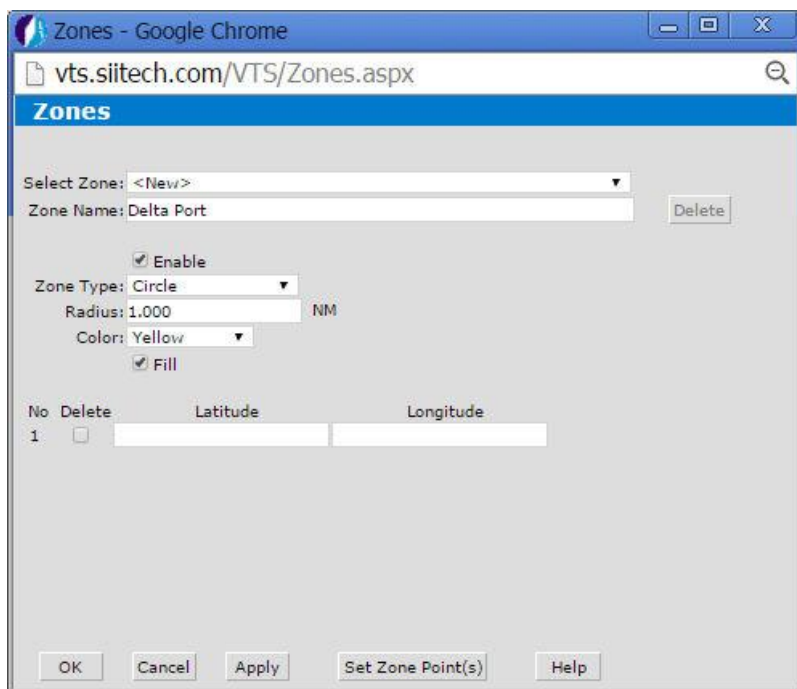

Circle zone

Creating a circle zone:

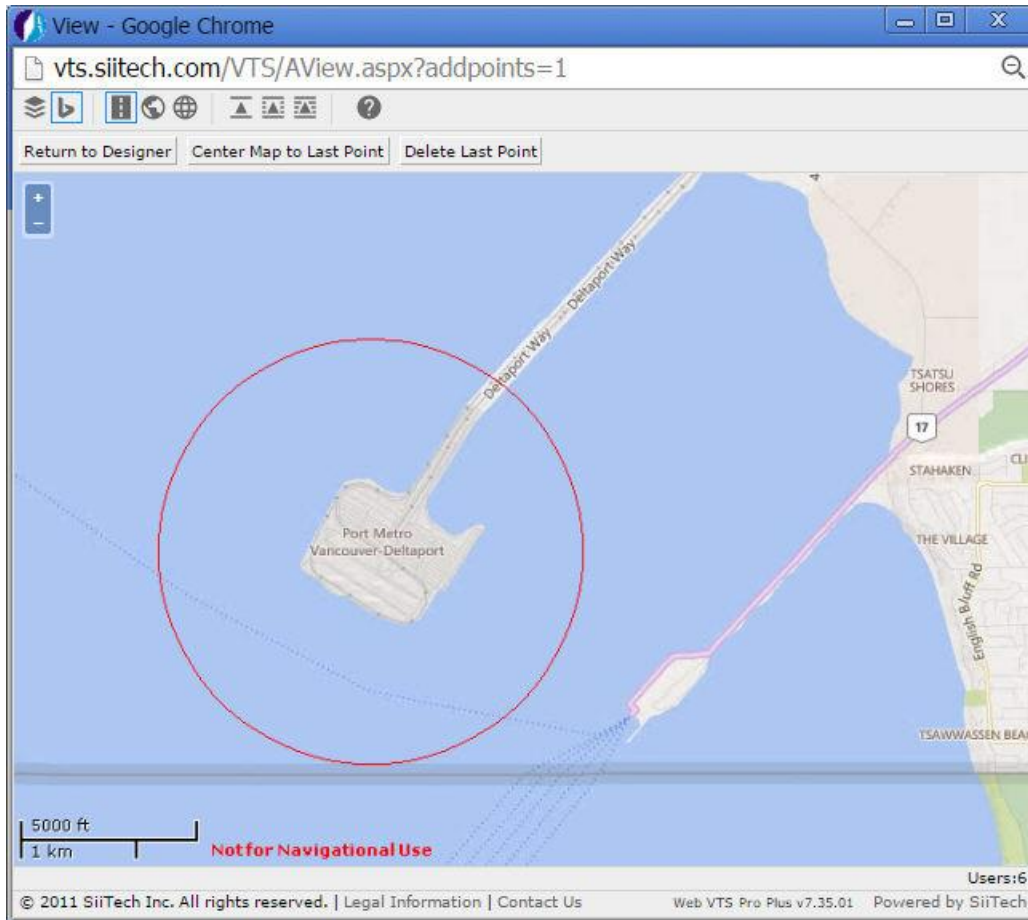

- Click the **Zone Designer** button  to open the **Zone Designer**.
- Select "<New>" from the **Select Zone** drop-down list.
- Type "Delta Port" in the **Zone Name** field.
- Leave the **Enable** box checked.
- Select "Circle" from the **Zone Type** drop-down list.
- Leave the default numerical value in the **Radius** field.
- Select "Yellow" from the **Color** drop-down list.
- Leave the **Fill** box checked.

The screenshot shows a web browser window titled "Zones - Google Chrome" with the address bar displaying "vts.siitech.com/VTS/Zones.aspx". The page content is titled "Zones" and features a configuration form for a zone. The form includes a "Select Zone:" dropdown menu set to "<New>", a "Zone Name:" text input field containing "Delta Port", and a "Delete" button. Below these are checkboxes for "Enable" (checked) and "Fill" (checked). The "Zone Type:" dropdown is set to "Circle", the "Radius:" is "1.000" with "NM" as the unit, and the "Color:" dropdown is set to "Yellow". At the bottom of the form is a table with columns "No", "Delete", "Latitude", and "Longitude". The first row contains the number "1", an unchecked checkbox, and two empty text input fields. At the very bottom of the page are five buttons: "OK", "Cancel", "Apply", "Set Zone Point(s)", and "Help".

Click the **Set Zone Point(s)** button to select the center of your circle. You will be redirected to the map view. Click on your desired location to establish your circle zone's center. Click the **Return to Designer** button to go back to the **Zone Designer** window. Tip: Zooming in on the map enlarges the circle for better precision.

SiiTech Web VTS Manual

The **Zone Designer** will now display the exact latitude and longitude coordinates of your circle zone's center.

Zones - Google Chrome

No	Delete	Latitude	Longitude
1	<input type="checkbox"/>	49.2875149390593	-122.962074279785
2	<input type="checkbox"/>	49.29064995643	-123.004302978516
3	<input type="checkbox"/>	49.288858542343	-123.03897857666
4	<input type="checkbox"/>	49.2830359969952	-123.081207275391
5	<input type="checkbox"/>	49.2713888435188	-123.107299804688
6	<input type="checkbox"/>	49.2642199973476	-123.12858581543
7	<input type="checkbox"/>	49.2713888435188	-123.168754577637
8	<input type="checkbox"/>	49.2781086908057	-123.221626281738
9	<input type="checkbox"/>	49.3419015865653	-123.213386535645
10	<input type="checkbox"/>	49.325345756605	-123.133392333984
11	<input type="checkbox"/>	49.3172895556005	-123.090476989746
12	<input type="checkbox"/>	49.3063220530783	-123.026962280273
13	<input type="checkbox"/>	49.3096797111419	-122.969627380371
14	<input type="checkbox"/>	49.2881867452782	-122.962074279785
15	<input type="checkbox"/>		
16	<input type="checkbox"/>		
17	<input type="checkbox"/>		
18	<input type="checkbox"/>		

- Click the **Zone Designer** button  to open the **Zone Designer** window.
- Select "<New>" from the **Select Zone** drop-down list.
- Type "Vancouver Harbour" into the **Zone Name** field.
- Leave the **Enable** box checked.
- Select "Polygon" from the **Zone Type** drop-down list.
- Select "Violet" from the **Color** drop-down list.
- Leave the **Fill** box checked.
- Click the **Set Zone Point(s)** button to add polygon points. You will be redirected to the map view.

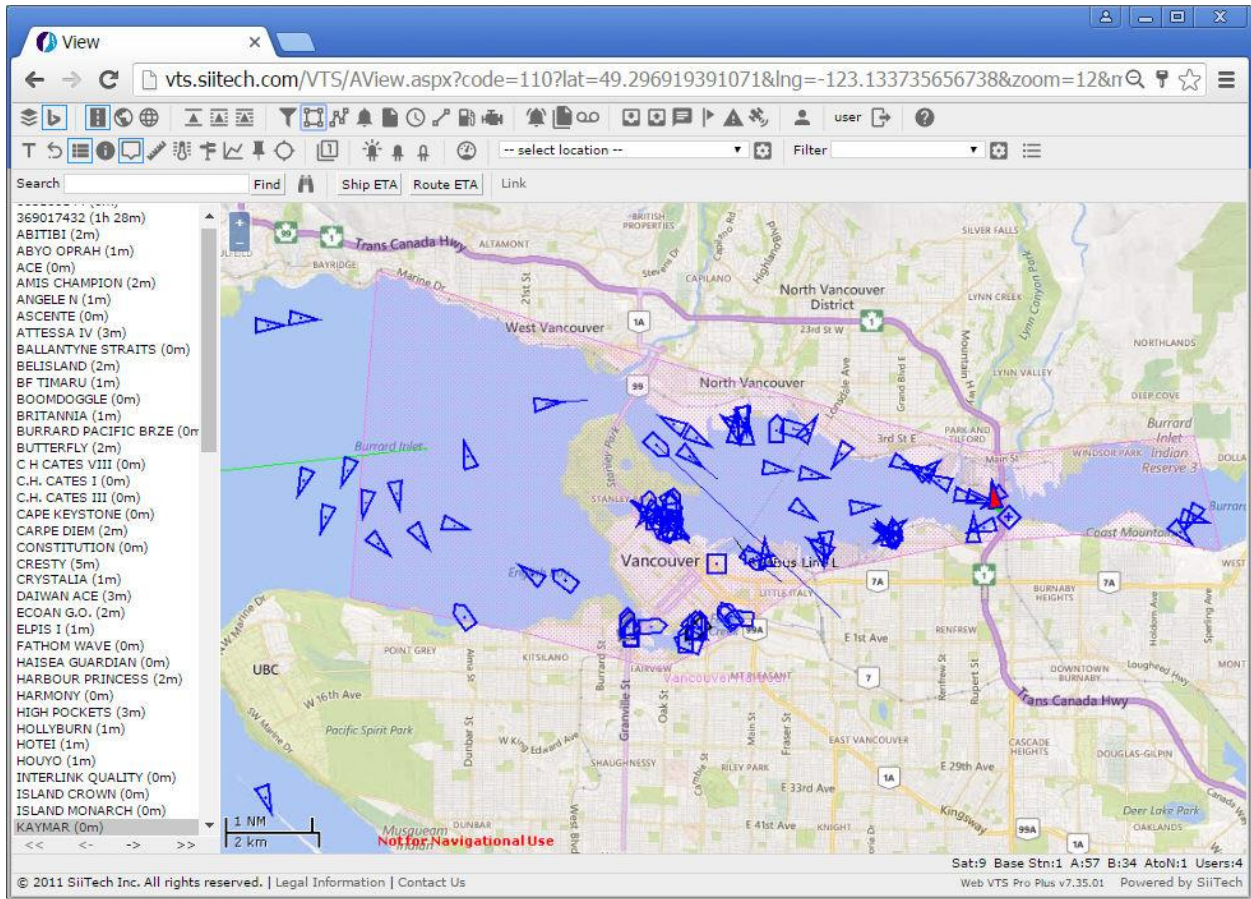

- Connect horizontal line segments together by clicking points around the desired area's perimeter in a clockwise direction. Follow our example shown in the image above to contain a similar area on the map within a series of irregular line segments (forming a polygon).
- Do not worry if your shape does not look identical to our example. It is OK to have the polygon cover parts of land.
- If you wish to redo a line segment, click the **Delete Last Point** button and try again.

Once you are satisfied with your shape, click the **Return to Designer** button to return to the **Zone Designer**. A list of latitude and longitude coordinates should now appear in the **Zone Designer** window.

Click **OK** to save changes and return to the main view.

Here is the final result:

Line

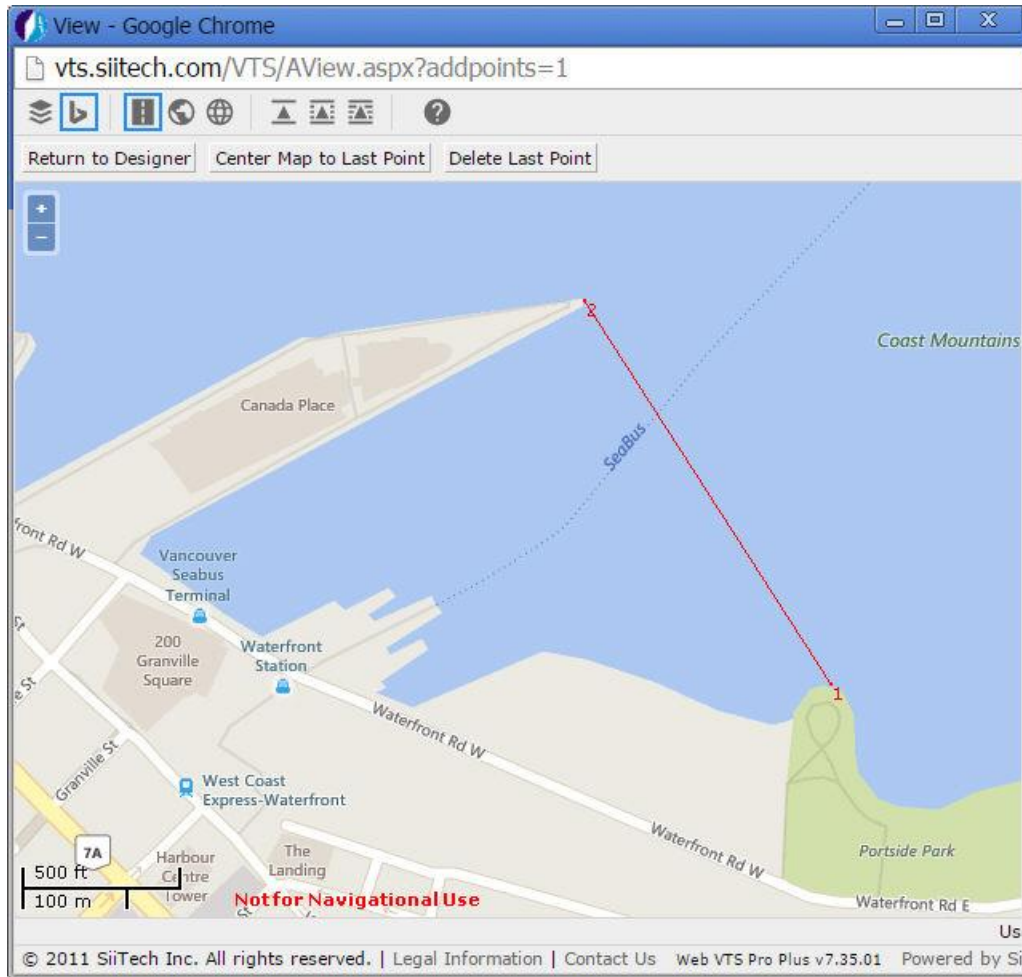

Creating a line

No	Delete	Latitude	Longitude
1	<input type="checkbox"/>		
2	<input type="checkbox"/>		
3	<input type="checkbox"/>		
4	<input type="checkbox"/>		
5	<input type="checkbox"/>		
6	<input type="checkbox"/>		

- Click the **Zone Designer** button  to open the **Zone Designer** window.
- Select "<New>" from the **Select Zone** drop-down list.
- Type "SeaBus Line" into the **Zone Name** field.
- Leave the **Enable** box checked.
- Select "Line L" from the **Zone Type** drop-down list.
- Select "Black" from the **Color** drop-down list.

Click the **Set Zone Point(s)** button to add line points. You will be redirected to the map view.

To draw the line, click once on the map to set **Point 1**, and click a second time to set **Point 2**. A red line will automatically appear between the two points you have clicked.

Click the **Return to Zone Designer** button to go back to the **Zone Designer**. You will see the **Latitude** and **Longitude** fields filled with the coordinates of the two points clicked on the map.

SiiTech Web VTS Manual

Select Zone: SeaBus Line L

Zone Name: SeaBus Line L

Enable

Zone Type: Line L

Color: Black

No	Delete	Latitude	Longitude
1	<input type="checkbox"/>	49.2864232344297	-123.103415966034
2	<input type="checkbox"/>	49.2897962437731	-123.10672044754

6	<input type="checkbox"/>		

Click the **Apply** button to save changes and click **OK** to return to the main view.

You should now see a line labelled "Seabus Line L" appear on your map, similar to the image below.

The screenshot displays a web browser window with the URL `vts.siitech.com/VTS/AView.aspx?code=110?lat=49.296919391071&lng=-12`. The interface includes a search bar, a list of ship identifiers and distances (e.g., 003160144 (0m), TAKAYA (0m)), and a map of the Vancouver waterfront. The map shows the coastline, including Canada Place, Vancouver Seabus Terminal, Waterfront Station, and Portside Park. A red line indicates a 'SeaBus' route. A scale bar at the bottom left shows 500 ft and 100 m. A red warning text 'Not for Navigational Use' is present on the map. The footer contains copyright information for SiiTech Inc. and version details for Web VTS Pro Plus v7.35.01.

Routes and ETA

Route Designer

The **Route Designer** is a designed to provide the user with a tool for obtaining an ETA (estimated time of arrival) to the desired waypoint by allowing the user to build a route.

Click the **Route Designer** button  in the toolbar to open the **Route Designer** window.

No	Delete	Latitude	Longitude	Show	Waypoint Name
1	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
2	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
3	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
4	<input type="checkbox"/>			<input checked="" type="checkbox"/>	

Select Route. Select an existing route or create a new route.

Route Name. Display and edit a route name (by default the program uses "RouteX" for every new route created, where X is the first available number).

Delete. Delete any selected route.

Enable. Check the box to enable the route.

Color. Select the desired color of the route line from the drop-down menu.

Latitude and Longitude. Enter the route's coordinates. Tip: click Set Route Points to select the coordinates on a map. Click Return to Designer to go back to the Route Designer.

Delete. Check this box to select the latitude and longitude pair(s) you wish to remove. Click Apply to delete.

Waypoint. Type the Waypoint's name to display it on the chart.

Show. Uncheck this box to eliminate a waypoint from the chart/map and ETA calculation.

OK. Save changes and return to the main view.

Cancel. Cancel all changes and return to the main view.

Apply. Save changes and keep the Route Designer window open.

Help. Open the Web VTS User's Guide.

Route and ETA

Create a route and use this route to obtain an ETA for your point of interest:

Routes - Google Chrome
vts.siitech.com/VTS/Routes.aspx

Routes

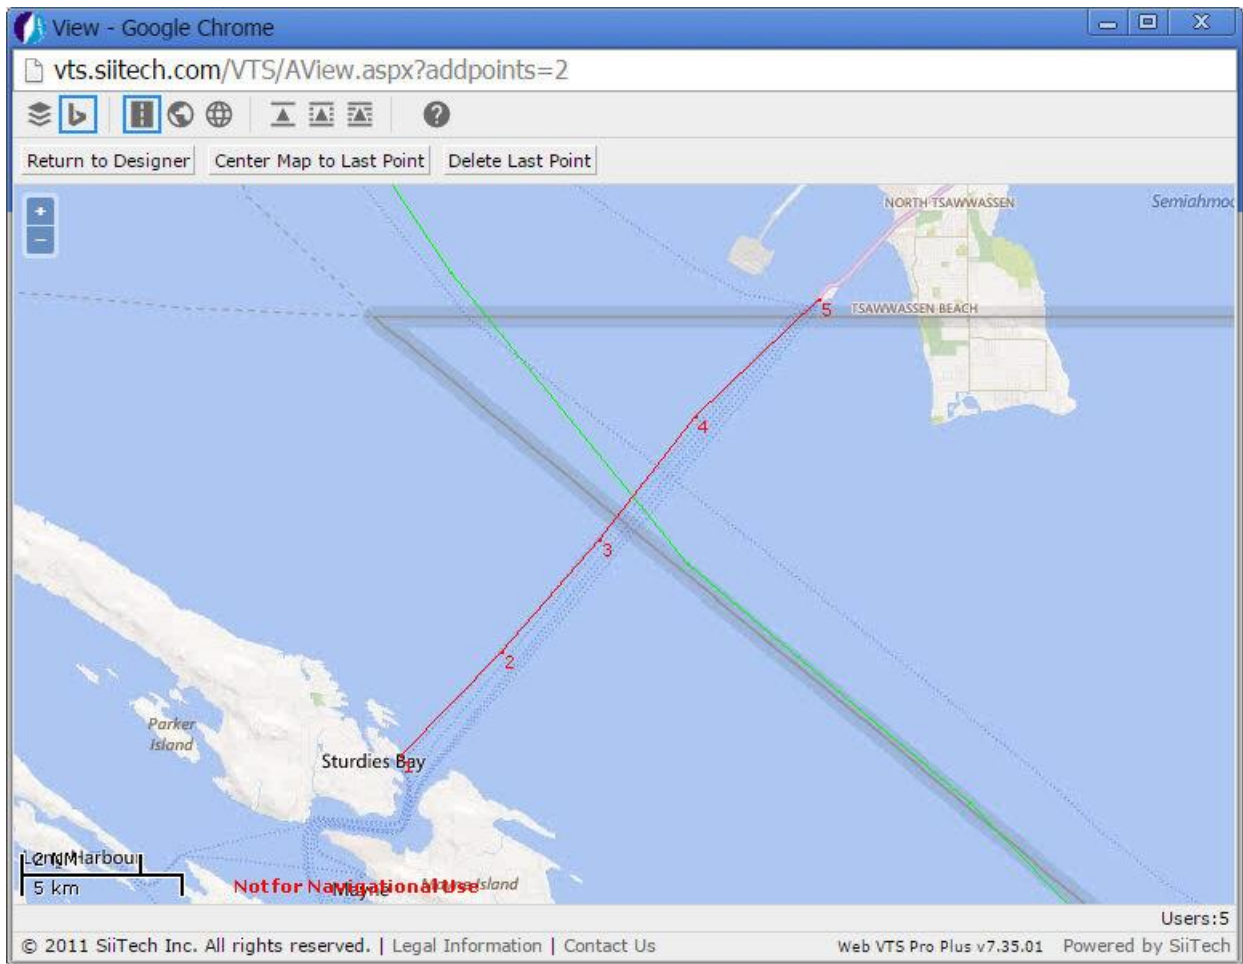

Select Route: Active Pass to Tsawwassen
Route Name: Active Pass to Tsawwassen

Enable
Color: Black

No	Delete	Latitude	Longitude	Show	Waypoint Name
1	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
2	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
3	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
4	<input type="checkbox"/>			<input checked="" type="checkbox"/>	

- Click the **Route Designer** button  to open the **Route Designer** window.
- Select "<New>" from the **Select Route** drop-down list.
- Type "Active Pass to Tsawwassen" in the **Route** field.
- Leave the **Enable** box checked.
- Select "Black" from the **Color** drop-down list.

To add waypoints, click the **Set Route Points** button. You will be redirected to the map view.

Draw the route by clicking consecutively in the direction you wish to go, with evenly spaced intervals between every click. A new number will appear beside each point on the map that you have just clicked.

Click the **Return to Designer** button to go back to the **Route Designer** window.

Select Route: Active Pass to Tsawwassen

Route Name: Active Pass to Tsawwassen

Enable

Color: Black

No	Delete	Latitude	Longitude	Show	Waypoint Name
1	<input type="checkbox"/>	48.8782639970697	-123.312606811523	<input checked="" type="checkbox"/>	Waypoint 1
2	<input type="checkbox"/>	48.9076080866404	-123.269348144531	<input checked="" type="checkbox"/>	Waypoint 2
3	<input type="checkbox"/>	48.9391901537025	-123.227462768555	<input checked="" type="checkbox"/>	Waypoint 3
4	<input type="checkbox"/>	48.9739073616089	-123.186264038086	<input checked="" type="checkbox"/>	Waypoint 4
5	<input type="checkbox"/>	49.0063483473348	-123.133392333984	<input checked="" type="checkbox"/>	Waypoint 5
6	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
7	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
8	<input type="checkbox"/>			<input checked="" type="checkbox"/>	
9	<input type="checkbox"/>			<input checked="" type="checkbox"/>	

Type "Waypoint 1-5" in the **Waypoint Name** field(s).

Note: Clearing any **Show** checkbox will omit this unchecked waypoint from the map view.

To improve accuracy, you can zoom in on the map view and build a route with numerous waypoints in close proximity to one another.

In that case, it is not necessary to monitor every single waypoint or show all points on the map in order to obtain an ETA.

You can check the box beside the points you consider necessary to monitor, and uncheck the rest of the points that you would like to hide.

Click the **Apply** button to save changes and keep the **Route Designer** open, or click **OK** to save changes and return to the main view.

SiiTech Web VTS Manual

Name	MMSI	SOG	COG	Waypoint 1	Waypoint 2	Waypoint 3	Waypoint 4	Waypoint 5
BOWEN QUEEN	316001232	13.1	46			7/23 17:29 (0h 8m)	7/23 17:41 (0h 20m)	7/23 17:55 (0h 34m)
QUEEN OF NEW WEST	316001255	17.8	36.5					7/23 17:29 (0h 8m)
SPIRIT OF VI	316001269	18.7	221.5	7/23 17:40 (0h 19m)	7/23 17:32 (0h 11m)	7/23 17:24 (0h 3m)		

Click on the **Route ETA** button in the toolbar to open a new **ETA** window. The expected length of time until each ship reaches the next point in its trajectory is displayed under the waypoint columns. You can set a time for the **ETA** window to refresh automatically if you choose to leave this window open. To track an individual ship's ETA, click on a ship to select it, and then click the **Ship ETA** button in the toolbar.

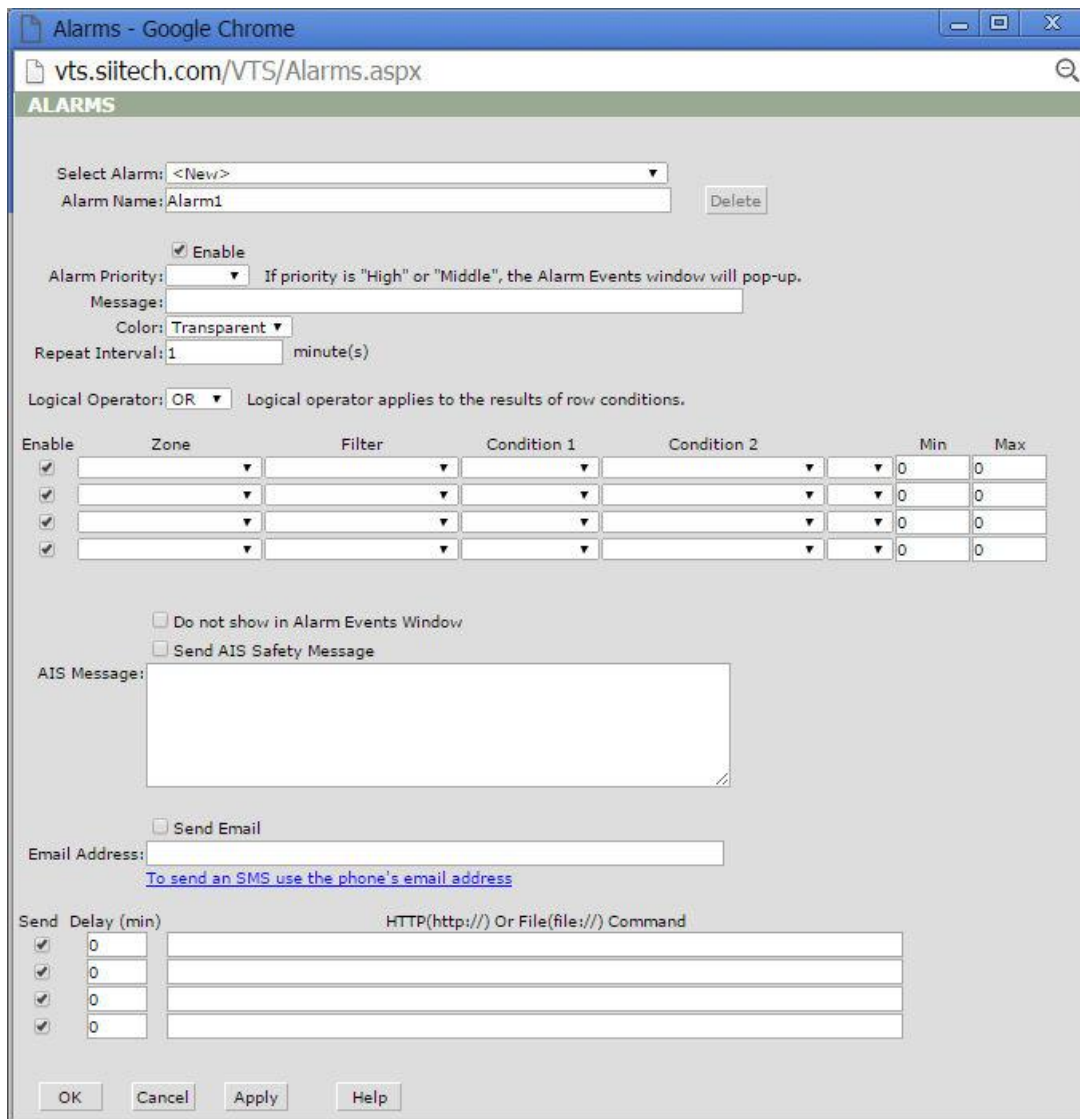

In this example, we have clicked on the BOWEN QUEEN. A pop-up will appear, reporting the ETA and distance to the next waypoint(s) for the selected ship only.

Waypoint	Distance	Estimated Time of Arrival
Waypoint 4	1.4 NM	7/23 17:42 (0h 6m)
Waypoint 5	4.2 NM	7/23 17:54 (0h 18m)

Alarms

Alarm Designer

Click the **Alarm Designer button**  in the toolbar to open the **Alarm Designer** in a new window.

The screenshot shows the 'ALARMS' web application interface. At the top, there is a 'Select Alarm:' dropdown menu with '<New>' selected, and an 'Alarm Name:' text box containing 'Alarm1' with a 'Delete' button to its right. Below this, there is an 'Enable' checkbox which is checked. The 'Alarm Priority:' dropdown is set to a default value, with a note: 'If priority is "High" or "Middle", the Alarm Events window will pop-up.' There is a 'Message:' text box, a 'Color:' dropdown set to 'Transparent', and a 'Repeat Interval:' text box set to '1' with the unit 'minute(s)'. A 'Logical Operator:' dropdown is set to 'OR' with a note: 'Logical operator applies to the results of row conditions.' Below this is a table with columns: 'Enable', 'Zone', 'Filter', 'Condition 1', 'Condition 2', 'Min', and 'Max'. The table contains four rows, each with a checked 'Enable' box and '0' in the 'Min' and 'Max' columns. Below the table, there are two checkboxes: 'Do not show in Alarm Events Window' (unchecked) and 'Send AIS Safety Message' (unchecked). An 'AIS Message:' text area is present. Below that is a 'Send Email' checkbox (unchecked) and an 'Email Address:' text box with a link: 'To send an SMS use the phone's email address'. At the bottom, there is a 'Send' section with a 'Delay (min)' column (all '0') and a 'Command' column with four empty text boxes. The interface ends with 'OK', 'Cancel', 'Apply', and 'Help' buttons.

Select Alarm. Select an existing alarm or create a new alarm.

Alarm Name. Display and edit an alarm name (by default the program uses "AlarmN" for every new alarm created, where N is the first available number).

Delete. Delete any selected alarm.

Enable. Check the box to enable the alarm.

Alarm Priority. Select level of alarm priority from "Low", "Middle", or "High". Selecting "Middle" or "High" priority will cause the Alarm Events window to automatically pop-up when the respective alarm is triggered. *Note:* Make sure that your browser allows pop-ups from the Web VTS website.

Message. Type the message you would like to appear on screen when the alarm is triggered.

Color. Select a text color from the drop-down menu for the message in the **Alarm Events** window.

Repeat Interval. Set a minimum time interval between notifications for alarms triggered more than one time. Enter "0" if you do not want to receive repeat notifications.

Logical Operator. Select "OR" to trigger an alarm event if conditions in any single row are met. Select "AND" to trigger an alarm if conditions in all rows are met.

Enable. Check this box to enable a zone.

Zone. Select the zone in which you wish to monitor alarm conditions.

Filter. Select the filter to monitor alarm conditions for specified ships only.

Condition 1. Select the alarm condition without parameters (see description below).

Condition 2. Select the alarm condition with parameters (see description below).

Do not show in Alarm Events Window. Prevents alarm notifications from appearing in the **Alarm Events** window.

Send AIS Safety Message. Check this box to send AIS Safety Messages to ships which triggered this alarm. *Note:* Web VTS must have access to AIS transponder or AIS base station.

AIS Message. Enter the body of text to be sent in AIS Safety Message.

Send Email. Check this box to receive alarm notifications via e-mail.

Email Address. Enter e-mail address or addresses separated by semicolons (;).

HTTP(<http://>) Or File(<file://>) Command. Use these fields for sending HTTP commands or updating text files on the server.

List of possible conditions without parameters (Condition 1):

- **On Enter.** Triggers alarm when ship enters zone.
- **On Exit.** Triggers alarm when ship exits zone.
- **On Enter/Exit.** Triggers alarm when ship enters or exits zone.
- **Light Off.** Triggers alarm when AtoN light is off.
- **Light Error.** Triggers alarm if AtoN reports light error.

- **RACON Error.** Triggers alarm if AtoN reports RACON error.
- **Health Alarm.** Triggers alarm if AtoN reports health alarm.
- **Off Position.** Triggers alarm if AtoN reports off-position status.
- **Low Battery.** Triggers alarm if AtoN reports low battery status.
- **Photocell Error.** Triggers alarm if AtoN reports photocell error.
- **DSC Distress Alert.** Triggers alarm if a DSC distress alert has been received.
- **DSC Urgency Call.** Triggers alarm if DSC urgency call has been received.
- **DSC Safety Call.** Triggers alarm if DSC safety call has been received.
- **DSC Routine Call.** Triggers alarm if DSC routine call has been received.
- **In Zone.** Triggers alarm if ship is located in specified zone.
- **Not In Zone.** Triggers alarm if ship is located outside the specified zone.
- **New Ship Data.** Triggers alarm if AIS data of ship has changed (ship name, call sign, IMO).
- **Mile Marker.** For internal use.
- **Geo-Fence.** Triggers alarm if AIS transponder generates "Geo-Fence Alert" signal.
- **SOS.** Triggers alarm if AIS transponder generates "SOS Alert" signal.
- **Power.** Triggers alarm if AIS transponder generates "Low Power Alert" signal.
- **On Battery.** Triggers alarm if device is battery powered.
- **Open Doors 0.** Triggers alarm if device generates Door Open signal (0).
- **Open Doors 1.** Triggers alarm if device generates Door Open signal (1).
- **Bit0 - Tilt.** Triggers alarm if AtoN tilt sensor is activated.
- **Bit1 - Shock.** Triggers alarm if AtoN shock sensor is activated.
- **Bit2 - GPS.** Triggers alarm in case of AtoN GPS acquisition failure.
- **Bit3 - GSM.** Triggers alarm in case of AtoN GSM module failure.
- **Bit4 - AIS.** Triggers alarm in case of AtoN AIS module failure.
- **Bit5- Guard.** Triggers alarm if AtoN guard sensor is activated.
- **Bit6 - CTRL.** Triggers alarm in case of AtoN controller hardware problem.
- **Bit7 - Power.** Triggers alarm in case of AtoN power subsystem failure.
- **GPS.** Triggers alarm if AIS transponder generates "GPS Alert" signal.

List of possible conditions with parameters (Condition 2):

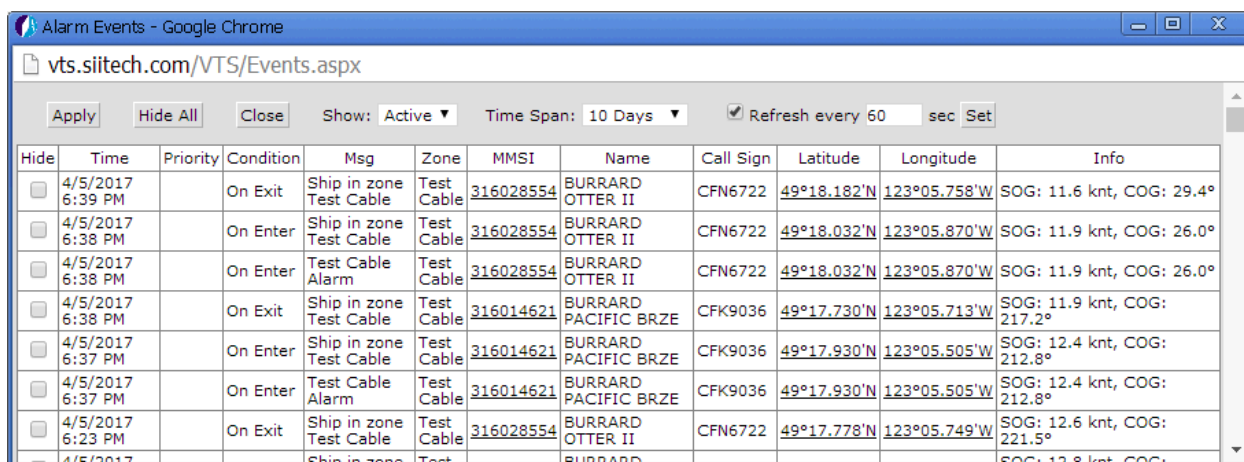

- **Speed (knots).** Triggers alarm if ship speed is in specified range.
- **Wind Speed (knots).** Triggers alarm if wind speed is in specified range.
- **Wind Gust (knots).** Triggers alarm if wind gust is in specified range.
- **Air Pres. (hPa).** Triggers alarm if air pressure is in specified range.
- **Air Temp. (°C).** Triggers alarm if air temperature is in specified range.
- **Analogue Int. (V).** Triggers alarm if AtoN analogue internal voltage is in specified range.
- **Analogue Ext.1 (V).** Triggers alarm if AtoN analogue external voltage is in specified range.

- **Analogue Ext.2 (V).** Triggers alarm if AtoN analogue external voltage is in specified range.
- **Voltage (V).** Triggers alarm if AtoN voltage is in specified range.
- **Current (A).** Triggers alarm if AtoN current is in specified range.
- **Reporting Interval (min).** Triggers alarm if ship reporting interval is in specified range.
- **Time to Enter (min).** Triggers alarm if ship will enter zone within specified time interval.
- **Time to Exit (min).** Triggers alarm if ship will exit zone within specified time interval.
- **Course Change (min|deg).** Triggers alarm if ship is changing course within specified parameter.
- **Approach (meters|min).** Triggers alarm if ship is approaching another ship with the specified speed.
- **Min.Speed and Time (knots|min).** Triggers alarm if ship speed is less than specified for a given time span..
- **Max.Speed and Time (knots|min).** Triggers alarm if ship speed is more than specified for a given time span.

Note: to trigger an alarm when parameters are out of specified range, use the "NOT" prefix.

View Alarms

You can view alarm information by clicking the **Show Events** button  in the toolbar to open the **Alarm Events** window.

<input type="checkbox"/>	4/5/2017 6:23 PM		On Exit	Ship in zone Test Cable	Test Cable	316028554	BARRARD OTTER II	CFN6722	49°17.778'N	123°05.749'W	SOG: 12.6 knt, COG: 221.5°

Apply. Save changes but keep the **Alarm Events** window open.

Close. Close the **Alarm Events** window.

Hide All. Confirm all alarms listen in **Alarm Events** simultaneously and dismiss further notifications.

Show. Select "Active" from the drop-down list to display only the alarms that you have not yet responded to. Select "All" from the drop-down list to view both active and hidden alarms.

Time Span. Select a predefined time span from the drop-down list to view only those alarms that fall within a certain time frame. You can choose from "24 hours", "48 hours", "10 days", "30 days", "90 days", "365 days", or "All".

Refresh every ___ sec. Check this box to automatically refresh your **Alarm Events** window. Use this field to type how often you would like **Alarm Events** to refresh (in seconds) and click the **Set** button to apply your changes.

Hide. Check this box beside the individual alarm(s) you would like to acknowledge or dismiss. Click the **Apply** button to save your changes.

Ship Arriving Alarm

For this example, we are going to build an alarm that will be triggered when the BARRARD OTTER II SeaBus crosses "SeaBus Line L" (see below).

SiiTech Web VTS Manual

The screenshot displays the SiiTech Web VTS interface. At the top, the browser address bar shows the URL: `vts.sitech.com/VTS/AView.aspx?code=110?lat=49.296919391071&lng=-123.13373`. Below the address bar is a toolbar with various navigation and tool icons. A search bar is located below the toolbar, with a dropdown menu showing "select location --" and a "Filter" button. On the left side, a list of ships is displayed, including "BARRARD OTTER II (0m)", "NORDIC PEARL (0m)", "TAKAYA (0m)", "TYMAC RANGER (1h 50m)", "TYMAC SPRAY (2m)", "TYMAC TIDE (39m)", "VFPA4 (34m)", and "WESTWOOD OLYMPIA (2m)". The main map area shows Burrard Inlet with a red ship icon representing the BARRARD OTTER II. A popup window provides detailed information for this ship: "BARRARD OTTER II", "MMSI/IMO: 316028554 / 9688180", "Lat./Lng.: 49°17.391'N / 123°06.216'W", "Nearest MM: n/a", "Type: Passenger ship", "Nav.Stat.: Moored", "Speed/Course: 10knt(11.5MPH) / 223.5°", "Len./Beam/Drgh: 34m / 12m / 0m", "UTC: 7/23/2016 2:26:07 AM", and "Received: 0 min ago". The map also shows "SeaBus Line L" and "SeaBus" routes. A scale bar at the bottom left indicates 500 feet and 100 meters. A red warning text "Not for Navigational Use" is visible at the bottom center. The bottom right corner shows the text "A:6 B:2 Us" and "Web VTS Pro Plus v7.35.01 Powered by Sii".

BARRARD OTTER II

Web VTS Pro Plus v7.35.01 Powered by Sii

Creating a SeaBus arriving alarm based on a previously defined zone ("Seabus line L"):

Select Alarm: <New>

Alarm Name: SeaBus Alarm

Enable

Alarm Priority: Middle If priority is "High" or "Middle", the Alarm Events window will pop-up.

Message: SeaBus arriving

Color: Blue

Repeat Interval: 0 minute(s)

Logical Operator: OR Logical operator applies to the results of row conditions.

Enable	Zone	Filter	Condition 1	Condition 2	Min	Max
<input checked="" type="checkbox"/>	SeaBus Line L <input type="button" value="v"/>	<input type="button" value="v"/>	On Enter <input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/> 0	<input type="button" value="v"/> 0
<input checked="" type="checkbox"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/> 0	<input type="button" value="v"/> 0
<input checked="" type="checkbox"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/> 0	<input type="button" value="v"/> 0
<input checked="" type="checkbox"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/>	<input type="button" value="v"/> 0	<input type="button" value="v"/> 0

Do not show in Alarm Events Window

Send AIS Safety Message

AIS Message: YOU HAVE ENTERED INTO A RESTRICTED ZONE.
LEAVE THE RESTRICTED ZONE.
COAST GUARD

Send Email

Email Address: coastguard@coastguard.com
[Send SMS using mobile provider's Email-to-SMS gateway](#)

Send	Delay (min)	HTTP(http://) Or File(file://) Command
<input checked="" type="checkbox"/>	0	admin: 12345678@174.1.59.216/Set.cmd?CMD=SetPower+P62=1
<input checked="" type="checkbox"/>	1	admin: 12345678@174.1.59.216/Set.cmd?CMD=SetPower+P62=0
<input checked="" type="checkbox"/>	0	
<input checked="" type="checkbox"/>	0	

1. Click the **Alarm Designer** button  to open the **Alarm Designer**.
2. Select "<New>" from the **Select Alarm** drop-down list.
3. Type "SeaBus Alarm" into the **Alarm** field.
4. Leave the **Enable** box checked.
5. Select "Middle" from the **Alarm Level** drop-down list.
6. Type "Seabus arriving" in the **Message** field.
7. Select "Blue" from the **Color** drop-down list.
8. Type "0" [minutes] into the **Repeat Interval** field (in this example, we are dealing with a one-time event).

9. Select "OR" from the **Logical Operator** drop-down list (in this example, only one condition must be satisfied in order to generate an alarm event).
10. Select "Seabus Line L" from the **Zone** drop-down list.
Note: Refer to "Line", found under the **Zone Examples** heading, for a detailed explanation on creating zones.
11. Leave the **Filter** field empty.
12. Select "On Enter" from the **Condition 1** drop-down list.
13. Leave **Condition 2** empty.
14. Leave "0" in the **Min Speed** field.
15. Leave "0" in the **Max Speed** field.
16. Leave the **Do not show in Alarm Events Window** box unchecked.
Note: When an alarm event happens (e.g. SeaBus crosses the line), the **Alarm Events** window will pop-up.

Optional Steps:

- Check **Send AIS Safety Message**.
Note: If you have AIS transponder that has a communication with Web VTS then you could send AIS message to any passing AIS equipped ship.
- Type any message in the **AIS Message** box. As an example, we have typed: "YOU HAVE ENTERED INTO A RESTRICTED ZONE. LEAVE THE RESTRICTED ZONE. COAST GUARD".
- Type an e-mail address into the **Email Address** field. As an example, we have typed: "coastguard@coastguard.com".
- Check **Send Email Notification Message**.
Note: When an alarm event happens (e.g. SeaBus crosses the line), an e-mail will be sent to the provided e-mail address.
To send an SMS notification, click **Send SMS using mobile provider's Email-to-SMS gateway**. Find your mobile provider's e-mail address and type your phone number in place of "10digitnumber" in the e-mail address template. Use semicolons (;) to separate e-mail addresses.
- Type an HTTP command in the **HTTP Command** field.
- Leave **Send HTTP** checked.
Note: When an alarm event happens (e.g. SeaBus crosses the line), an HTTP command will be sent to the IP Power box. In this case, we are using the **IP Power 9258** device to turn the projector ON and OFF.
- Type the desired number of minutes in the Delay field.
Note: In this case, the IP Power device is triggered (ON) immediately because the first number is 0. Since our second value is 1, the IP Power device will be triggered (OFF) in 1 minute. This means that when the BURRARD OTTER II SeaBus crosses "SeaBus Line L", the projector is turned ON right away and subsequently turned OFF in 1 minute.

Click **Apply** to save changes and click **OK** to return to the main view.

As soon as the alarm condition occurs, the Alarm Event window will appear.

Hide	Time	Priority	Condition	Msg	Zone	MMSI	Name	Call Sign	Latitude	Longitude	Info
<input type="checkbox"/>	7/22/2016 7:35 PM	Middle	On Enter	SeaBus arriving	SeaBus Line L	316028554	BURRARD OTTER II	CFN6722	49°17.542'N	123°06.235'W	SOG: 12.1 knt, COG: 17.8°

Note: If the alarm has "Middle" or "High" priority, the Alarm Event window will pop-up automatically. Check Hide and click Apply to confirm that you have read the notification. After the confirmation, the Alarm Event window will no longer pop-up until the next event.

Tip: Click **Hide All** to confirm multiple alarm notifications at once.

As soon as the alarm condition occurs:

- You will receive the following e-mail and/or SMS notification:

```
UTC: 16-07-23 02:35, Local: 16-07-22 19:35, Alarm: SeaBus Alarm, Type: On Enter, MMSI:
316028554, Name: BURRARD OTTER II, Type: Passenger ship, SOG: 12.1 knt, COG: 17.8°, Lat:
49°17'32.53N, Lng: 123°06'14.11W, Msg: SeaBus arriving, AIS Msg:
```

```
Sent by SiiTech Web VTS
www.siitech.com
```

- The following AIS message is sent to the ship that has entered a restricted zone: "YOU HAVE ENTERED INTO A RESTRICTED ZONE. LEAVE THE RESTRICTED ZONE. COAST GUARD". *Note:* You must have an AIS transponder connected to the computer running Web VTS in order to send AIS messages.
- The IP Power device is triggered and any connected equipment, for instance, a projector or a siren, will turn ON and generate a signal.

Repeating Alarm

Some alarm conditions (e.g. In Zone) may persist for a prolonged period of time. If you want to receive a notification for the first event only, set the **Repeat Interval** field to '0'. If you want to receive notifications during the whole time the condition is satisfied, set the **Repeat Interval** field to the desired time interval between notifications.

SiiTech Web VTS Manual

Alarms

Select Alarm: Test Cable Alarm
Alarm Name: Test Cable Alarm

Enable
Alarm Priority: If priority is "High" or "Middle", the Alarm Events window will pop-up.
Message:
Color: Transparent

Repeat Interval: 10 minute(s). Enter "0" if you do not want to receive repeat notifications.
"Repeat Interval" specifies the minimum time interval between notifications for alarms triggered more than one time.

Logical Operator: OR Logical operator applies to the results of row conditions.

Enable	Zone	Filter	Condition 1	Condition 2	Min	Max
<input checked="" type="checkbox"/>	Test Cable		In Zone		0	0
<input checked="" type="checkbox"/>					0	0
<input checked="" type="checkbox"/>					0	0
<input checked="" type="checkbox"/>					0	0
<input checked="" type="checkbox"/>					0	0

Do not show in Alarm Events Window
 Send AIS Safety Message
AIS Message: YOU ARE ENTERING RESTRICTED ZONE

Send Email
Email Address: ship
[Send SMS using mobile provider's Email-to-SMS gateway](#)

Send Delay (min) HTTP(http://) Or File(file://) Command

<input checked="" type="checkbox"/>	0	
<input checked="" type="checkbox"/>	0	
<input checked="" type="checkbox"/>	0	
<input checked="" type="checkbox"/>	0	

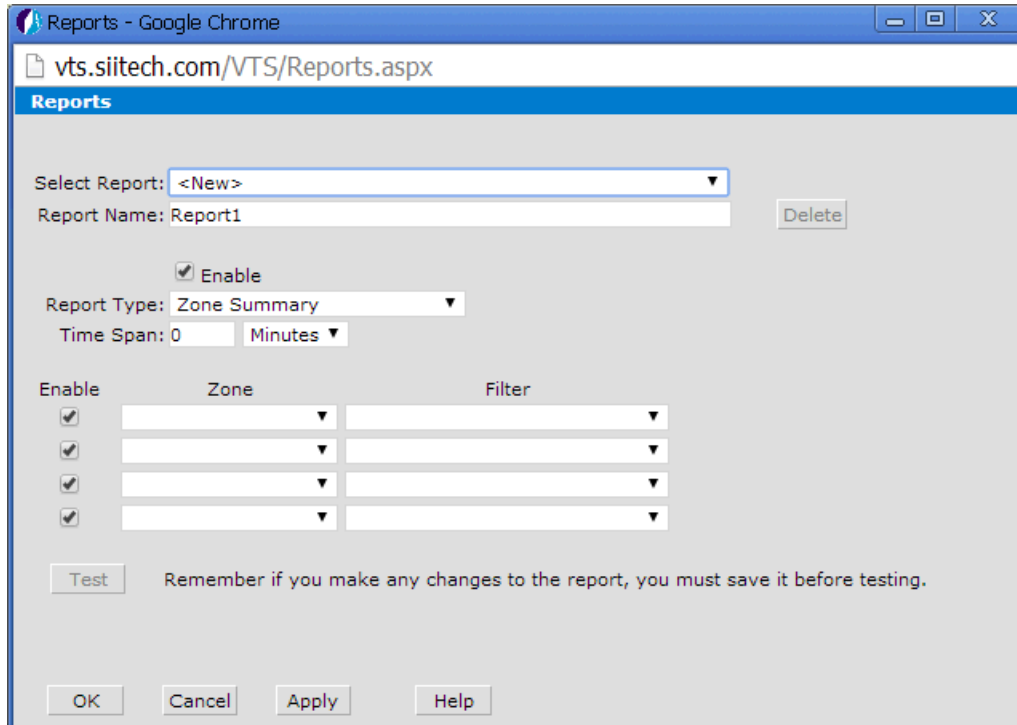

In this example, you will receive notifications every 10 minutes until the ship is in the zone.

Reports

Report Designer

The **Report Designer** allows users to build and customize reports.

Click the **Report Designer** button  in the toolbar to open the **Report Designer** in a new window.

The screenshot shows a web browser window titled "Reports - Google Chrome" with the URL "vts.siitech.com/VTS/Reports.aspx". The page has a blue header with the word "Reports". Below the header, there is a form with the following elements:

- "Select Report:" dropdown menu with "<New>" selected.
- "Report Name:" text input field containing "Report1" and a "Delete" button to its right.
- An "Enable" checkbox which is checked.
- "Report Type:" dropdown menu with "Zone Summary" selected.
- "Time Span:" text input field containing "0" and a "Minutes" dropdown menu.
- A table with three columns: "Enable", "Zone", and "Filter". Each row has a checked checkbox, a dropdown menu, and another dropdown menu.
- A "Test" button and a note: "Remember if you make any changes to the report, you must save it before testing."
- At the bottom, there are "OK", "Cancel", "Apply", and "Help" buttons.

Select Report. Select an existing report or create a new report.

Report Name. Display and edit a report name (by default the program uses "ReportN" for every new report created, where N is the first available number).

Delete. Delete any selected report.

Enable. Check the box to enable the report. Uncheck the box to disable the report.

Report Type. Use the drop-down list to select any predefined report (e.g. Zone Summary, Extended Zone Summary, Arrival/Departure, Arrival Time Forecast, Berth Time Summary, Speed Summary, Speed Violation, Enter/Exit).

Time Span. Select the default time span of the data to be used for this report. You will be able to change the time span value in the Run Reports form.

Zone. Select an existing zone from the drop-down list.

Filter. Select an existing filter from the drop-down list.

Enable. Check this box to include the zone and/or filter in the report. Uncheck the box to omit the selected zone and/or filter.

Test. Test the designed report.

OK. Save changes and return to the main view.

Cancel. Cancel all changes and return to the main view.

Apply. Save changes and keep the Report Designer window open.

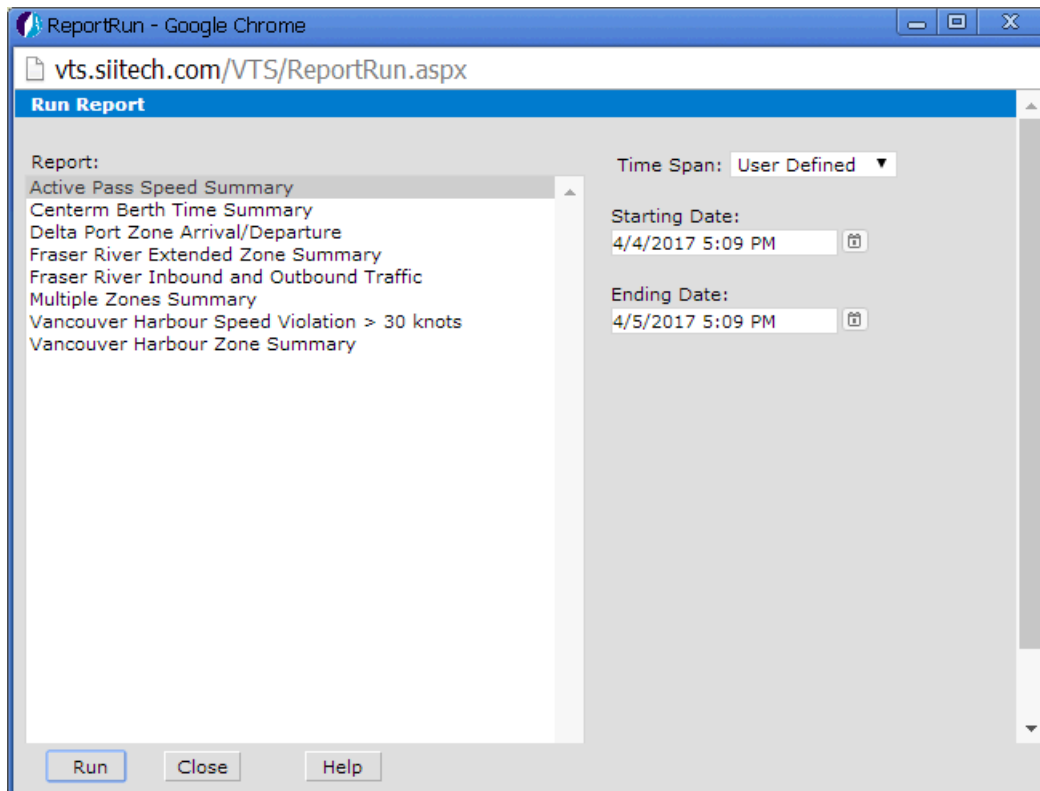

Help. Open the Web VTS User's Guide.

List of possible report types:

- **Zone Summary.** List of all ships in the specified zone(s).
- **Extended Zone Summary.** List of all ships in the specified zone(s) with ship details.
- **Arrival/Departure.** Time of ship arrival to and departure from exit the specified zone(s).
- **Arrival Time Forecast.** Computed time of ship arrival to the specified zone(s).
- **Berth Time Summary.** Ship berth time report. Mooring/unmooring times in the specified zone(s).
- **Speed Summary.** Recorded speed of all ships passing through the specified zone(s).
- **Speed Violation.** List of ships violating maximum and minimum speed limits in the specified zone(s).
- **Enter/Exit.** Time of ship entrance into and exit from the specified zone(s).
- **Weather.** Conditions reported from weather stations in the specified zone(s).
- **Out-of-Tolerance.** List of ships that have not yet sent a LRIT report within the specified time span.
- **Daily Fuel Consumption.** Daily fuel consumption for the ship equipped with SiiTech fuel consumption monitor.
- **Monthly Fuel Consumption.** Monthly fuel consumption for the ship equipped with SiiTech fuel consumption monitor.
- **Estimated Fuel Consumption.** Estimated fuel consumption report based on ship fuel consumption rate.
- **Zone Details.** List of all ships in the specified zone(s) with enter/exit times.
- **Extended Zone Details.** List of all ships in the specified zone(s) with enter/exit times and ship details.
- **Anchorage Time.** Ship anchorage time report.
- **Extended Anchorage Time.** Ship anchorage time report with ship details.

Run Reports

Click the **Run Report** button  to run and display any previously built reports in a new window.

Report. Select a report from the list of previously built reports.

Time Span. Select a predefined time span from the drop-down list or choose the option "User Defined" to customize your own time span.

Starting Date. Type your desired starting date and time (e.g. MM/DD/YYYY 12:34 PM) or use the drop-down calendar and hour/minute sliding bars instead.

Note: User Defined mode only.

Ending Date. Type your desired ending date and time (e.g. MM/DD/YYYY 12:34 PM) or use the drop-down calendar and hour/minute sliding bars instead.

Note: User Defined mode only.

Run. Run and display the report in a new window.

Close. Close the **Run Report** window and return to the main view.

Help. Open the Web VTS help.

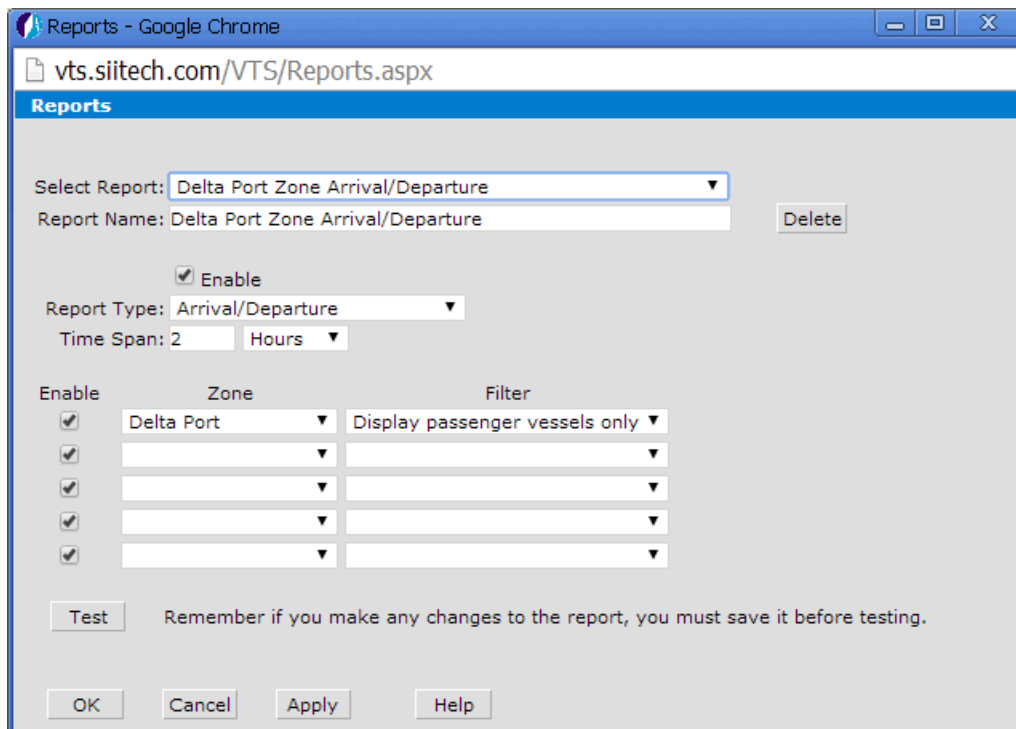

Arrival/Departure report

This report will display information about the arrival/departure passenger ships within the Delta Port zone.

Note: The Delta Port zone had already been created in a previous example. We will limit this report to passenger ships by applying a new filter:

- To create the appropriate filter, click the **Filter Designer** button  to open the Filter Designer.
- Type "Display passenger ships only" into the **Filter Name** field.
- In the first row, select "Passenger" from the **Ship Type** drop-down list. Change the color and/or border color to make your filtered ships easier to identify (optional).
- In the second row, type * (asterisk) into the **MMSI** field (* denotes "all ships"). Uncheck the **Enable** box.
- Leave all other fields unmodified. Apply the filter.

Creating the Arrival/Departure report:

Reports - Google Chrome
vts.sitech.com/VTS/Reports.aspx

Reports

Select Report: Delta Port Zone Arrival/Departure
Report Name: Delta Port Zone Arrival/Departure

Enable
Report Type: Arrival/Departure
Time Span: 2 Hours

Enable	Zone	Filter
<input checked="" type="checkbox"/>	Delta Port	Display passenger vessels only
<input checked="" type="checkbox"/>		
<input checked="" type="checkbox"/>		
<input checked="" type="checkbox"/>		
<input checked="" type="checkbox"/>		

Remember if you make any changes to the report, you must save it before testing.

- Click the **Report Designer** button  to open Report Designer.
- Select "<New>" from the **Select Report** drop-down list.
- Type "Delta Port Zone Arrival/Departure" into the **Report Name** field.
- Leave the **Enable** box checked.
- Select "Arrival/Departure" from the **Report Type** drop-down list.
- Input "2 Hours" into the **Time Span** field. This will retrieve ship arrival and departure data from the past 2 hours.
- Select "Delta Port" from the **Zone** drop-down list.
- Select "Display passenger ships only" from the **Filter** drop-down list.

Click the **Apply** button to save your settings. Click the **Test** button to display the Arrival/Departure report.

One Zone Summary report

The **Zone Summary** report is designed to produce a quick estimate regarding harbour conditions.

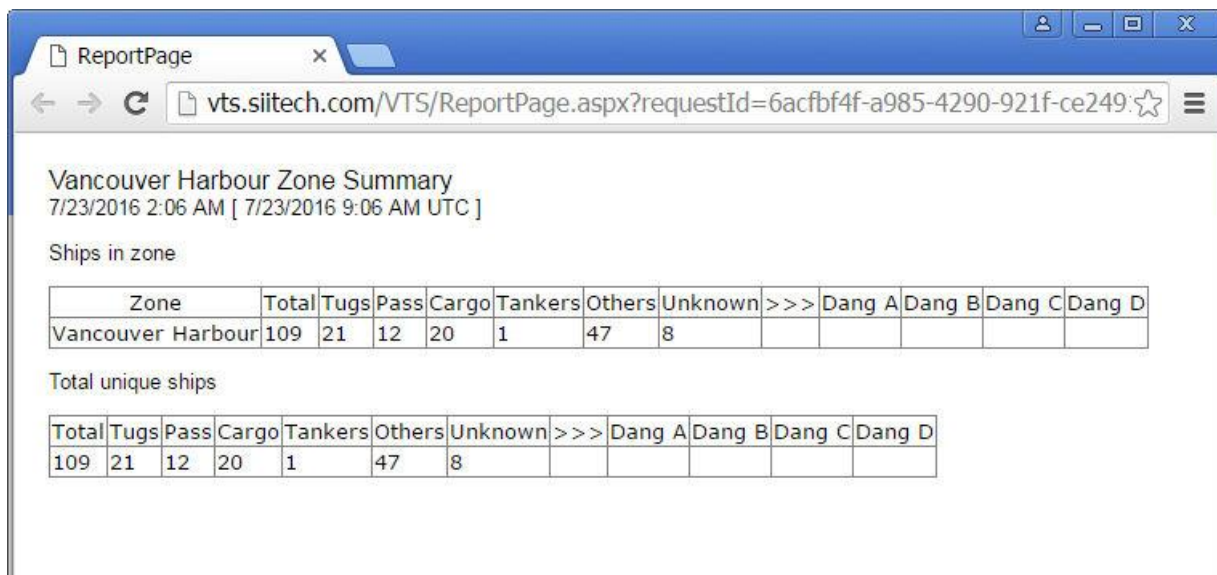

Note: In order to produce any report, you must have created at least one zone. Recall the polygon zone ("Vancouver Harbour") we built in the **Zone Examples** section. In this example, we will be dealing with the same zone again (shown in the image below).

Creating the Zone Summary report for one zone

- Click the **Report Designer** to open the **Report Designer** window.
- Select "<New>" from the **Select Report** drop-down list.
- Type "Vancouver Harbour Zone Summary" in the **Report** field.
- Leave the **Enable** box checked.
- Select "Zone Summary" from the **Report Type** drop-down list.
- Select "Vancouver Harbour" from the **Zone** drop-down list.
- Leave the **Filter** option blank.

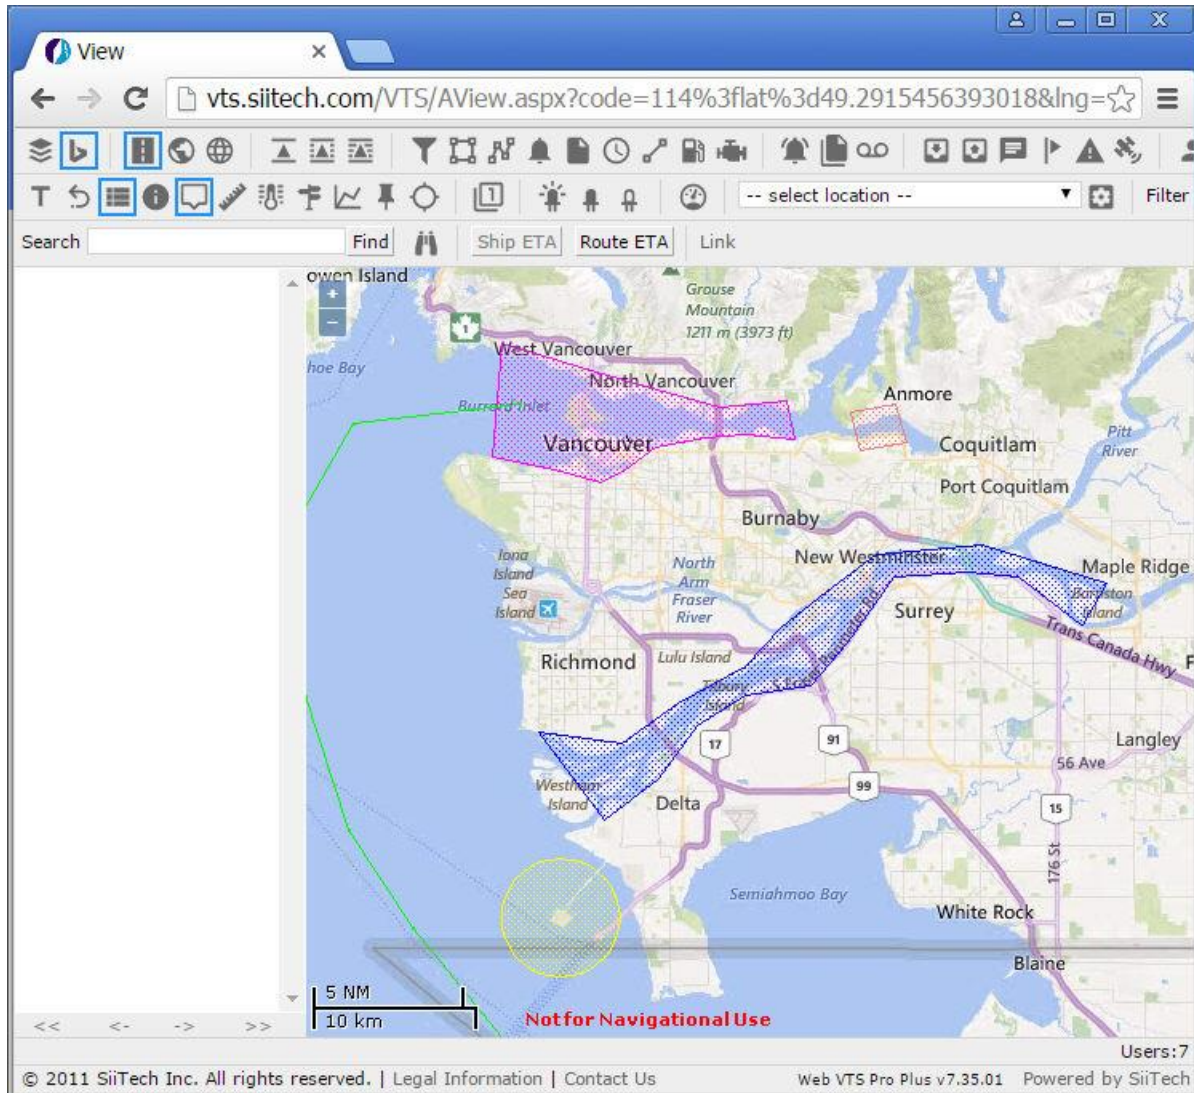

Click the **Apply** button to save your settings. Click the **Test** button to generate the **Vancouver Harbour Zone Summary** report.

Note: If you have several overlapping zones, the “Total unique ships” table will display only unique ships within those zones.

Multiple Zones Summary report

For this example, three zones have been created: "Vancouver Harbour" (violet polygon), "Delta Port" (yellow circle) and "Fraser River" (blue polygon). Refer to the following image:

Creating the Multiple Zones Summary report:

- Click the **Report Designer** button  to open the **Report Designer** window.
- Select "<New>" from the **Select Report** drop-down list.
- Type "Multiple Zones Summary" into the **Report** field.
- Leave the **Enable** box checked.
- Select "Zone Summary" from the **Report Type** drop-down list.
- Select "Vancouver Harbour" from the **Zone** drop-down list in the first row.
- Select "Delta Port" from the **Zone** drop-down list in the second row.
- Select "Fraser River" from the **Zone** drop-down list in the third row.
- Leave **Filter** option blank.

Click the **Apply** button to save your settings. Click the **Test** button to generate the **Multiple Zones Summary** report.

Multiple Zones Summary
7/23/2016 11:28 AM [7/23/2016 6:28 PM UTC]

Ships in zone

Zone	Total	Tugs	Pass	Cargo	Tankers	Others	Unknown	>>>	Dang A	Dang B	Dang C	Dang D
Vancouver Harbour	129	22	14	22	1	55	15		1			
Delta Port	15	3	9	3								
Fraser River	46	16		4		22	4		1			

Total unique ships

Total	Tugs	Pass	Cargo	Tankers	Others	Unknown	>>>	Dang A	Dang B	Dang C	Dang D
190	41	23	29	1	77	19	2				

Extended Zone Summary report

The **Extended Zone Summary** report provides a detailed description about each ship within your specified zone . In this example, we will generate a report for the previously created "Fraser River" zone.

Creating the Extended Zone Summary report:

Reports - Google Chrome
vts.siiotech.com/VTS/Reports.aspx

Reports

Select Report: Fraser River Extended Zone Summary ▼
Report Name: Fraser River Extended Zone Summary Delete

Enable
Report Type: Extended Zone Summary ▼
Time Span: 0 Minutes ▼

Speed Violation report

The **Speed Violation** report is a tool which can be used to check ship speed within a predefined zone and record speed violations. You can set a minimum speed, a maximum speed, or a speed range for your zone. In this example, we will set the upper speed limit to 30 knots.

This report will be built for the "Vancouver Harbour" zone, which we have already used in previous examples.

(Note: see the **Zone Examples** heading for a detailed guide on creating polygon zones.)

Creating the Speed Violation report:

- Click the **Report Designer** button  to open the **Report Designer** window.
- Select "<New>" from the **Select Report** drop-down list.
- Type "Vancouver Harbour Speed Violation > 30 knots" in the **Report Name** field.
- Leave the **Enable** box checked.
- Select "Speed Violation" from the **Report Type** drop-down list.
- Input "6 Hours" in the **Time Span** field. This will provide a list of all ships violating the zone's speed limit within the past 6 hours. The time span can be customized for all **Speed Violation** reports.
- Select "Vancouver Harbour" from the **Zone** drop-down list.
- Leave the **Filter** option blank.
- Leave the **Min Speed** field blank.
- Enter "30.0" into the **Max Speed** field (knots).

Click the **Apply** button to save your settings. Click the **Test** button to display the **Speed Violation** report.

Vancouver Harbour Speed Violation > 30 knots
7/23/2016 8:24 AM - 7/23/2016 2:24 PM [7/23/2016 3:24 PM UTC - 7/23/2016 9:24 PM UTC]

316028722	TYMAC STORM	7/23/2016 10:44 AM	49°18.166'N	123°06.915'W	31.2	30.8	1 min	-1
316028722	TYMAC STORM	7/23/2016 12:10 PM	49°18.962'N	123°09.041'W	30.5	30.5	0 min	-1

The report contains information regarding:

- Position (coordinates) of the first recorded violation
- Maximum speed of each ship
- Average speed of each ship
- Duration of time that the ship's maximum speed was above the permitted speed.

Speed Summary report

The **Speed Summary** report can be used to make a thorough analysis of ship speeds within any particular high-traffic passage.

Note: To produce the report for this example, we have created the "Active Pass" zone using the **Zone Designer** (green polygon).

Active Pass is a narrow passage used as the main ferry route between Canada's Southern Gulf Islands.

The screenshot displays a web browser window with the URL `vts.siitech.com/VTS/AView.aspx?code=110?lat=49.1682365284525&lng=-122.9988`. The interface features a search bar at the top left, a list of vessels on the left side, and a main map area. The vessel list includes: 003160096 (0m), BOWEN QUEEN (0m), COASTAL CELEBRATION (0m), and ZEPHYR (1m). The map shows Mayne Island and its surrounding waters, with labels for Sturdies Bay, Georgeson Bay, Active Pass, Mayne Island Indian Reserve 6, and Mayne Island. A red warning text "Not for Navigational Use" is positioned at the bottom of the map area. The interface also includes a scale bar (5000 ft / 1 km) and a status bar at the bottom with the text "© 2011 SiiTech Inc. All rights reserved. | Legal Information | Contact Us" and "Web VTS Pro Plus v7.35.01 Powered by SiiTech".

Creating the Speed Summary report:

Reports - Google Chrome
vts.siiotech.com/VTS/Reports.aspx

Reports

Select Report: Active Pass Speed Summary ▼

Enter/Exit Report

Note: This report will display inbound and outbound traffic on the Fraser River. For this example, we have built Line 1, Line 2, and Line 3 on the Fraser River (see image below). Refer to the **Zone Examples** section for a detailed review of how to create lines.

Creating the Enter/Exit report:

- Click the **Report Designer** button  to open the **Report Designer**.
- Select "<New>" from the **Select Report** drop-down list.
- Type "Fraser River Inbound and Outbound Traffic" in the **Report Name** field.
- Leave the **Enable** box checked.
- Select "Enter/Exit" from the **Report Type** drop-down list.
- Input "12 Hours" into the **Time Span** field. This will retrieve enter/exit data from the past 12 hours.
- Select "Line 1" from the **Zone** drop-down list in the first row.
- Select "Line 2" from the **Zone** drop-down list in the second row.
- Select "Line 3" from the **Zone** drop-down list in the third row.
- Select "Display only cargo ships" from the **Filter** drop-down list for all zones (in all three rows).

Click the **Apply** button to save your settings. Click the **Test** button to display the **Enter/Exit** report.

Email Address:

Remember if you make any changes to the task, you must save it before testing.

Select Task. Select an existing task or create a new task.

Task Name. Display and edit a task name (by default the program uses "TaskX" for every new task created, where X is the first available number).

Delete. Delete any selected report.

Task Title. Enter the task title. Task title will be printed at the beginning of the document.

Enable. Check this box to enable the task.

Run Task on. Select either day(s) of the week or day(s) of the month.

Start. Type your desired starting date and time (e.g. MM/DD/YYYY 12:34 PM) or use the drop-down calendar and hour/minute sliding bars instead.

Repeat Every. Select a repeat interval time from the drop-down list (1, 2, 3, 4, 6, or 12 hours).

Expire. Enter the task expiration date.

Last Sent Date. Use this field only if you want to repeat an already executed task. Select the desired date and time for beginning the repetition of this task.

Report Name. Select the report name to be executed during this task.

Time Span. Select the time span, if it is required for report execution.

Language. Select the language for the selected report.

Time Zone. Select the time zone for the selected report.

Time Zone Offset. If you selected "User Defined" time zone, enter the time zone offset.

Add CSV File. Check this box if you want to receive a CSV file with the report data.

Email Address. Enter the email address(es) of the recipients of this report. Separate multiple addresses with a semicolon (;).

Test. Test the designed task.

Send. Test the task and email the result.

OK. Save changes and return to the main view.

Cancel. Cancel all changes and return to the main view.

Apply. Save changes and keep the Task Scheduler window open.

Help. Open the Web VTS User's Guide.

Scheduled Report Emails

Click the **Task Scheduler** button  in the toolbar to open the **Task Scheduler** window.

In this example, we will configure an "Arrival_Departure" report to be sent automatically via email every 3 hours from Monday to Friday during the year 2017.

Cable Monitoring

Cable Designer

The **Cable Designer** allows the user to enter submarine cable locations into the system.

Click the **Cables** button  in the toolbar to open the **Cable Designer** in a new window.

This form contains a list of existing cables. To edit an existing cable, click the **Edit** link (on the left side of the cable name). Click the **Add Cable** button to add a new cable. Click the **Alarm** link (on the far right side of the table) to create an alarm related to a specific cable.

Cable Form

The **Cable** form allows the user to enter or edit cable data.

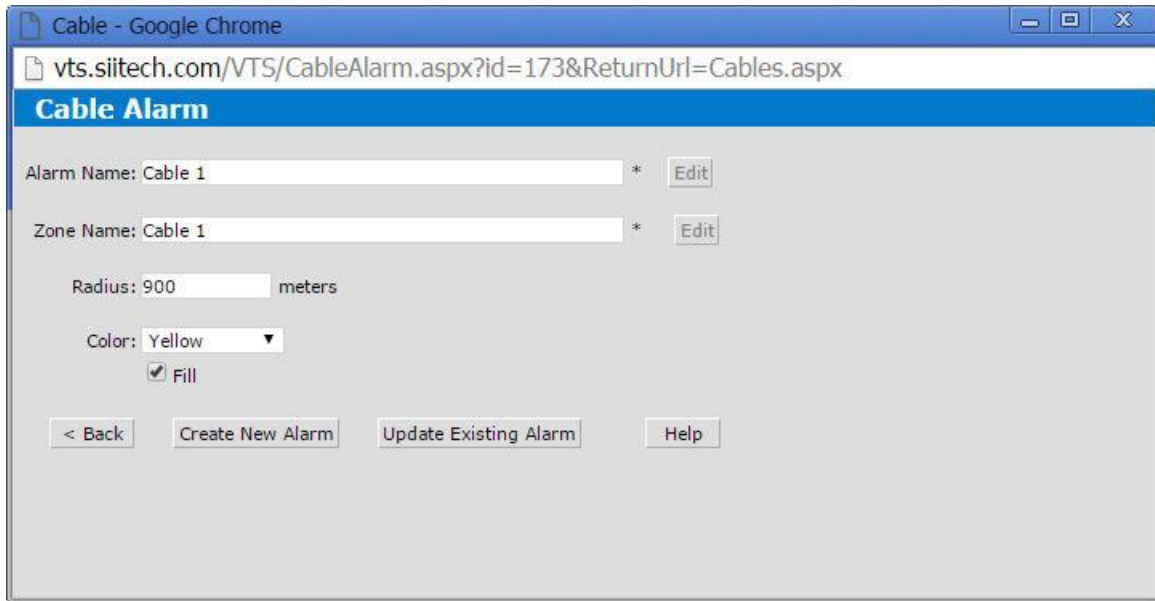

The screenshot shows a web browser window titled "Cable - Google Chrome" with the address bar displaying "vts.siiotech.com/VTS/Cable.aspx?id=173&ReturnUrl=Cables.aspx%3fpage%3d0". The page content is a form titled "Cable" with the following fields and controls:

- Name: Cable 1 (with an asterisk and a "Delete" button)
- Description: (empty text box)
- Location: (empty text box)
- Cable System: (empty text box)
- Issue: (empty text box)
- Date: 7/20/2016 (with a calendar icon)
- Enable: Enable
- Color: Black (dropdown menu)
- Lat/Lng Format: Decimal Degrees (dropdown menu)
- Coordinates: (large empty text area with a note: "Open your document in Excel, press Ctrl-A, Ctrl-C, then click your mouse here and press Ctrl-V.")

At the bottom of the form are buttons for "OK", "Cancel", "Apply", and "Help".

Cable Alarm Form

The **Cable Alarm** form allows the user to create alarms related to a particular cable.

Cable Alarm

1. Click the **Cables** button  in the toolbar to open the **Cable Designer** in a new window.
2. Click the **Add Cable** button to create a new cable. Click the **Edit** button to modify existing cable data.

Cables									
	<u>Cable Name</u>	<u>Description</u>	<u>Location</u>	<u>Cable System</u>	<u>Issue</u>	<u>Date</u>	<u>Enable</u>	<u>Color</u>

Apply Hide All Close

AIS Messages

View received AIS messages

You can view all received AIS messages by clicking the **Inbox** button  in the toolbar.

Close. Close your **Inbox** and return to the main view.

Time Interval. Select how far back in time you want your messages to be shown in your **Inbox**.

Refresh every ___ sec. Use this field to type how often you would like to check for new messages and click the **Set** button to apply your changes.

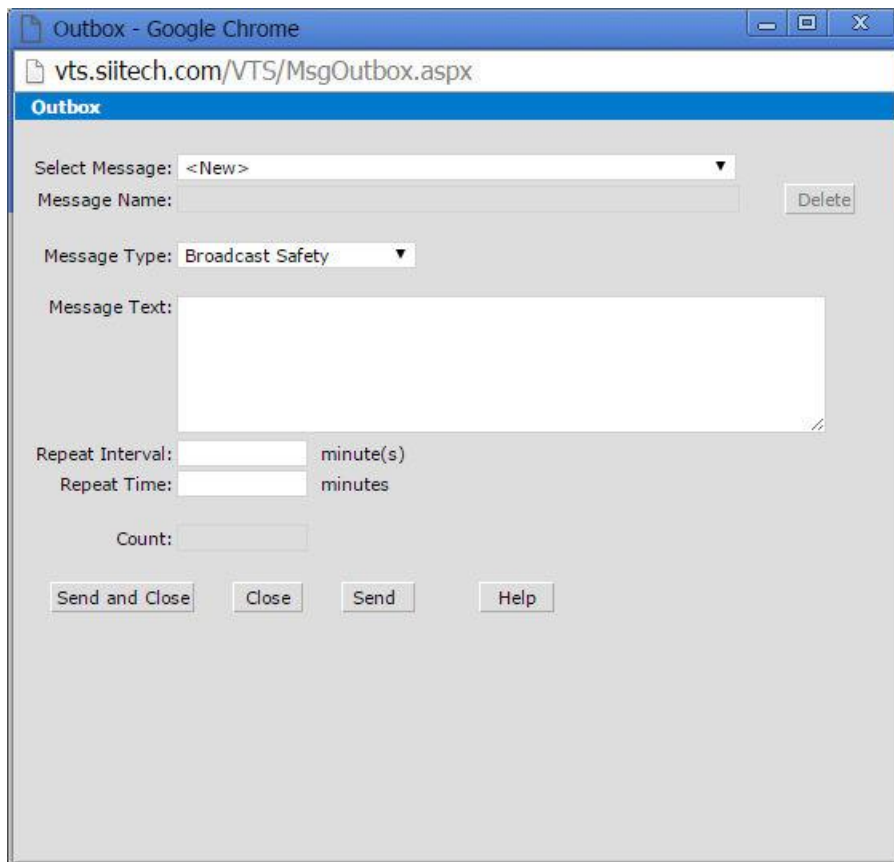

Show Messages. Filter messages to be displayed in your **Inbox** at any given time by selecting an option from the drop-down list.

Check the **Text** box to see text messages. Check the **AtoN** box to see Aid-to-Navigation messages.

Send AIS messages

To send AIS messages click the **Outbox**  in the toolbar.

Note: This function only works with a connected AIS transponder.

Select Message. Choose any existing message from the drop-down list to modify or select <New> to compose a new message.

Message Name. Shows the name of your selected message.

Delete. Delete the selected message.

Message Type. Choose between Broadcast Safety message or Addressed Safety message from the drop-down list.

Addressed Safety message only: choose ship name (if known) from the **Select MMSI** drop-down list. If you do not know the ship's name, type its MMSI number in the **MMSI** field.

Message Text. Type your message here. Maximum length is 153 characters.

Repeat Interval. Determines how often your message will be sent out (e.g. typing "3" will re-send your message every 3 minutes).

Repeat Time. Total duration of sending out messages (e.g typing "15" will stop sending/re-sending any messages after 15 minutes have passed).

Count. Shows the number of sent messages.

Send and Close. Send message, close Outbox, and return to the main view.

Close. Close Outbox without sending a message and return to the main view.

Send. Send message but leave Outbox window open.

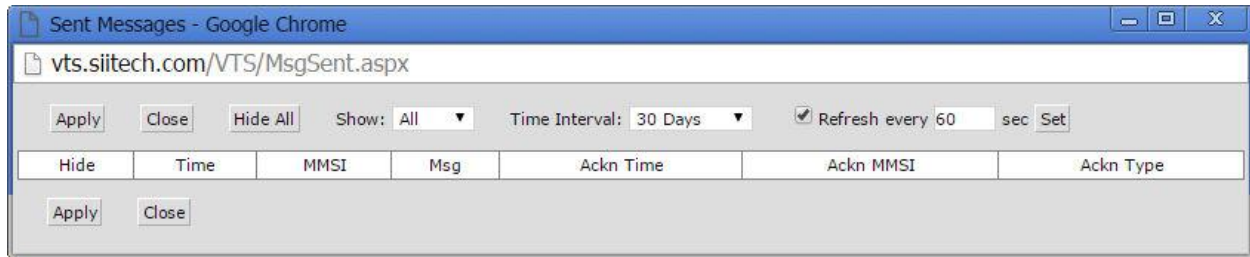

Help. Open the Web VTS User's Guide.

Sending addressed safety messages

- Click the **Outbox** button  in the toolbar to open the **Outbox** window.
- Select "Addressed Safety" from the **Message Type** drop-down list.
- Select MMSI or name from the **Select MMSI** drop-down list. The MMSI number will appear in **MMSI** field. *Note:* You may also type the MMSI number in the **MMSI** field.
- Type "Test message 1" in the **Message Text** field.
- Type "3" in the **Repeat Interval** field.
- Type "15" in the **Repeat Time** field.
- Click the **Send and Close** button to send the message and close the window. *Note:* To confirm that your message has been sent, you can open the **Sent Messages** window by clicking the **Sent Messages** button .

View sent AIS messages

To view AIS messages you have sent, click the **Sent Messages** button  in the toolbar.

Apply. Save changes but keep the **Sent Messages** window open.

Close. Close window and return to the main view.

Hide All. Hide all messages at once.

Show. Choose between "All" (all sent messages, including those you have hidden) or "Active" (only messages that you have not hidden).

Time Interval. Select how far back in time you want your messages to be shown.

Refresh every ___ sec. Use this field to type how often you would like to check for recently sent messages and click the **Set** button to apply your changes.

Hide. Check the box beside the individual message(s) you would like to hide and click the **Apply** button.

Send virtual AtoN messages

Click the **Virtual AtoN** button  in the toolbar to open the **Aid-to-Navigation** window.

Note: This function only works with a connected AIS base station.

Select AtoN. Select an existing AtoN from the drop-down list or create a new one.

AtoN Name. Display or edit AtoN name.

Delete. Delete the selected AtoN.

Enable. Check the box to enable the selected AtoN's transmission.

AtoN Type. Select the type of virtual AtoN from the drop-down list.

MMSI. Enter the MMSI number of the virtual AtoN.

Latitude and Longitude. Enter the coordinates of the virtual AtoN or click the **Set** button to locate it on the map.

Repeat Interval. Determines how often your message will be repeated (e.g. typing "3" will broadcast your message every 3 minutes).

Repeat Time. Total duration of broadcasting time (e.g typing "15" will stop broadcasting messages after 15 days have passed).

VDO Count. Shows the number of sent AtoN messages.

VDM Count. Shows the number of forwarded AtoN messages.

OK. Save changes and return to the main view.

Cancel. Cancel all changes and return to the main view.

Apply. Save changes and keep the Aid-to-Navigation window open.

Help. Open the Web VTS User's Guide.

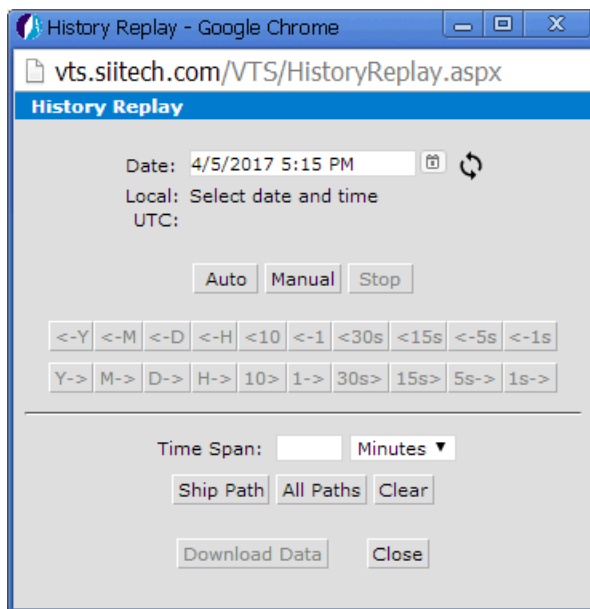

History Replay and Data

History Replay

The History Replay features:

- Replay a ship's trip step-by-step in predefined time intervals (e.g. investigating an accident by replaying the ship's movements on a minute-by-minute basis).
- Display one ship's entire trip during a selected time interval.
- Display trips of all ships in the area determined by your current view.
- Download trip data for one or several ships in a specified time interval.

Click **History Replay**  in the toolbar to open the History Replay in a new window.

Date. Type your desired starting date and time (in your local format) or use the drop-down calendar and hour/minute sliding bars instead. Click  to automatically input the current time.

Auto. Start replaying historic AIS data; automatically update the screen every minute.

Manual. Use the upper row of buttons to rewind through historic AIS data in predefined increments. Use the lower row of buttons to fast forward through historic AIS data in predefined increments (1sec, 5sec, 15sec, 30sec; 1min, 10min; 1hr; 1day; 1mo; 1yr.).

Stop. Turn History Replay off.

Close. Turn History Replay off and close the window.

Time Span. Choose a time span for showing the ship's path.

Ship Path. Draw the path for a selected ship within a specified period of time. *Note:* You must select a ship prior to drawing a path.

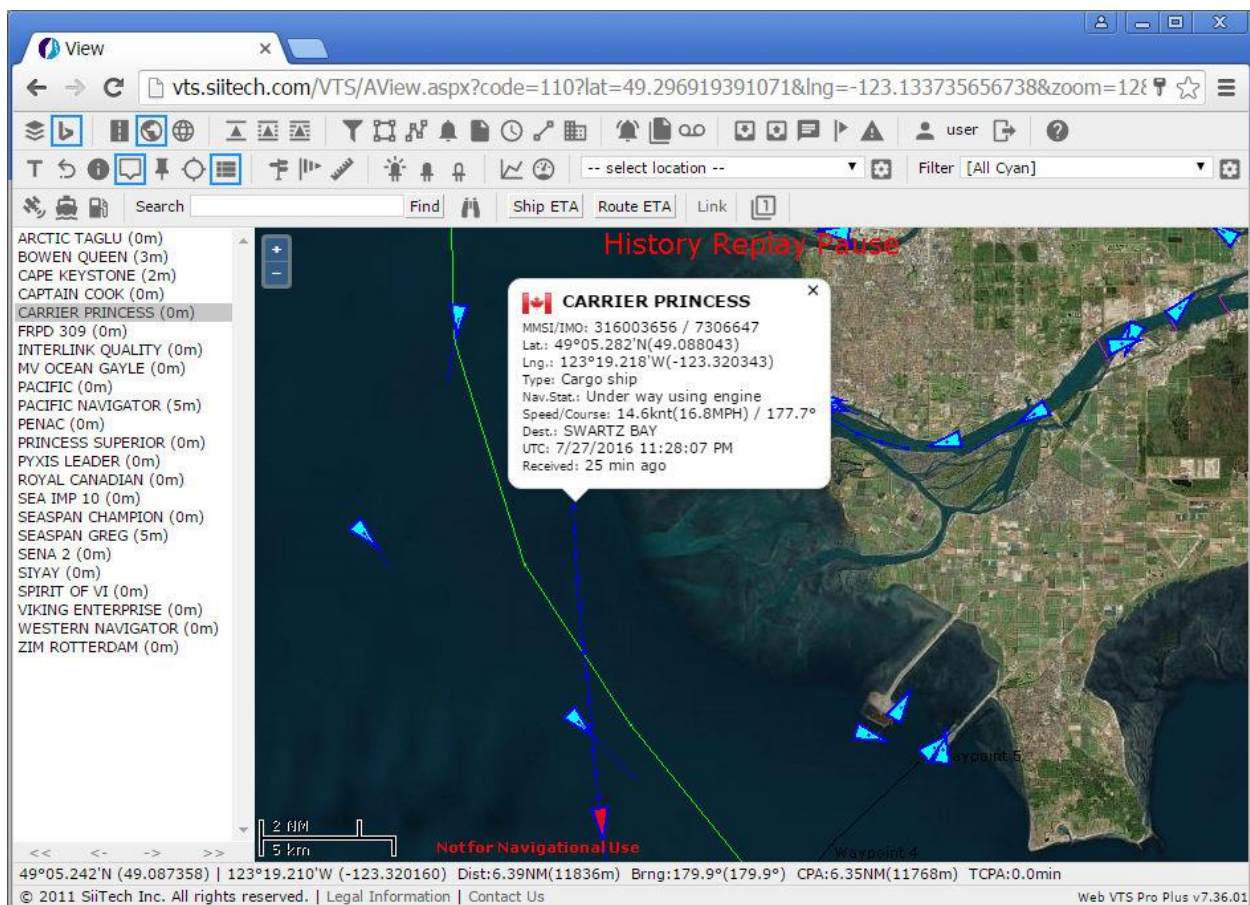

All Paths. Draw the paths of all ships in the area determined by your current view within a specified period of time.

Download Data. Download trip data in CSV format for the path(s) drawn on your screen.

Clear. Clear all path drawings from your current view.

Draw ship paths or download trip data

- Click on the ship to select it.
- Click the **History Replay** button  to open the **History Replay** window.
- In the **Date** field, enter the end date of the time interval.
- In the **Time Span** field, enter the desired length of the time interval.
- Click the **Ship Path** button. This will show the ship's path on the chart view.
- Click the **Download Data** button to download the path data onto your computer.
- To remove the ship's path from the chart view, click the **Clear** button.
- To close the window, click the **Close** button.

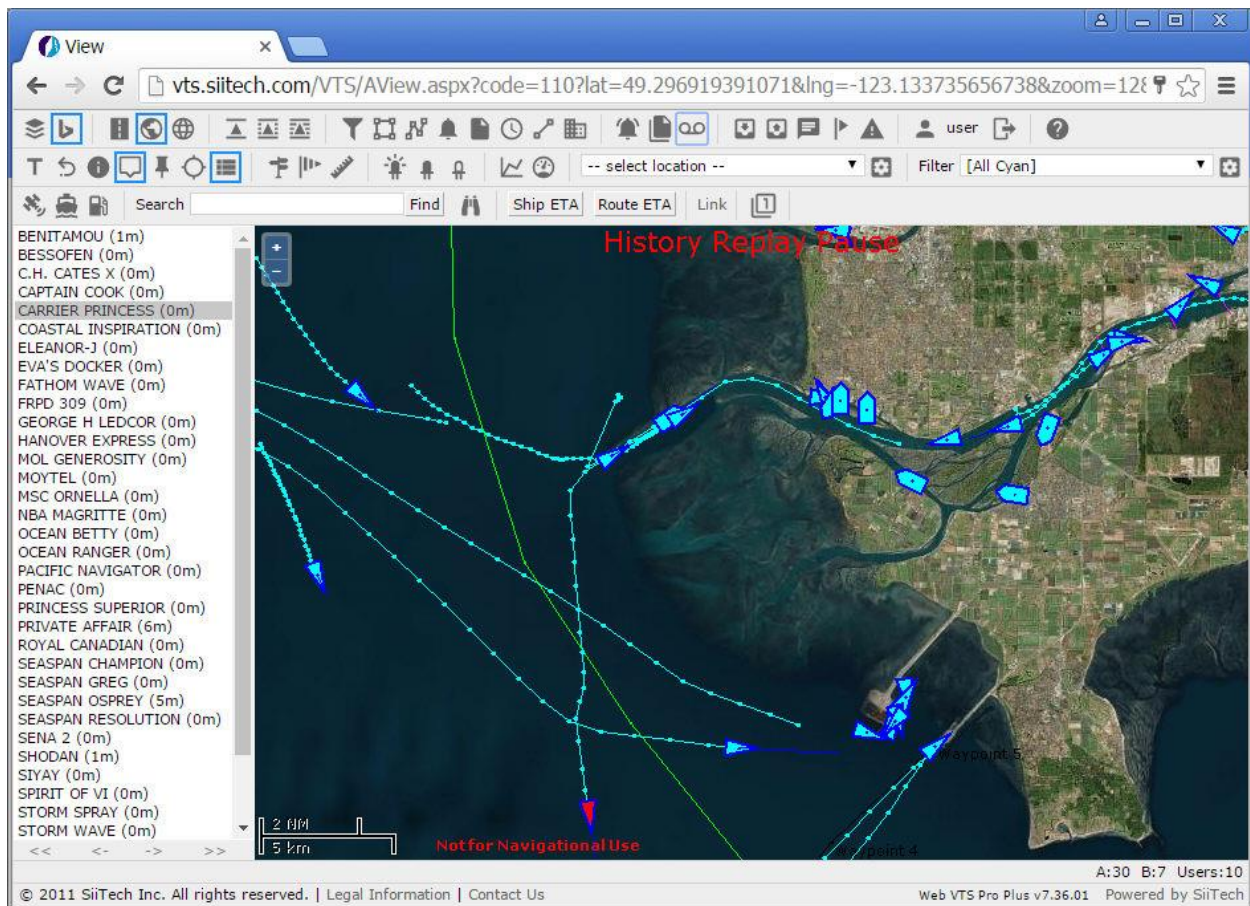

The screenshot displays the VTS software interface. The main window shows a map with several ship paths drawn in blue and green. A detailed information window for the **CARRIER PRINCESS** is open, displaying the following data:

- Ship Name:** CARRIER PRINCESS
- MMSI/IMO:** 316003656 / 7306647
- Lat.:** 49°05.282'N(49.088043)
- Lng.:** 123°19.218'W(-123.320343)
- Type:** Cargo ship
- Nav.Stat.:** Under way using engine
- Speed/Course:** 14.6knt(16.8MPH) / 177.7°
- Dest.:** SWARTZ BAY
- UTC:** 7/27/2016 11:28:07 PM
- Received:** 25 min ago

The interface includes a search bar, a list of ships on the left, and a toolbar at the top. The status bar at the bottom shows coordinates (49°05.242'N | 123°19.210'W) and other navigation data. A red warning message "Not for Navigational Use" is visible at the bottom of the map area.

Draw all ship paths or download trip data

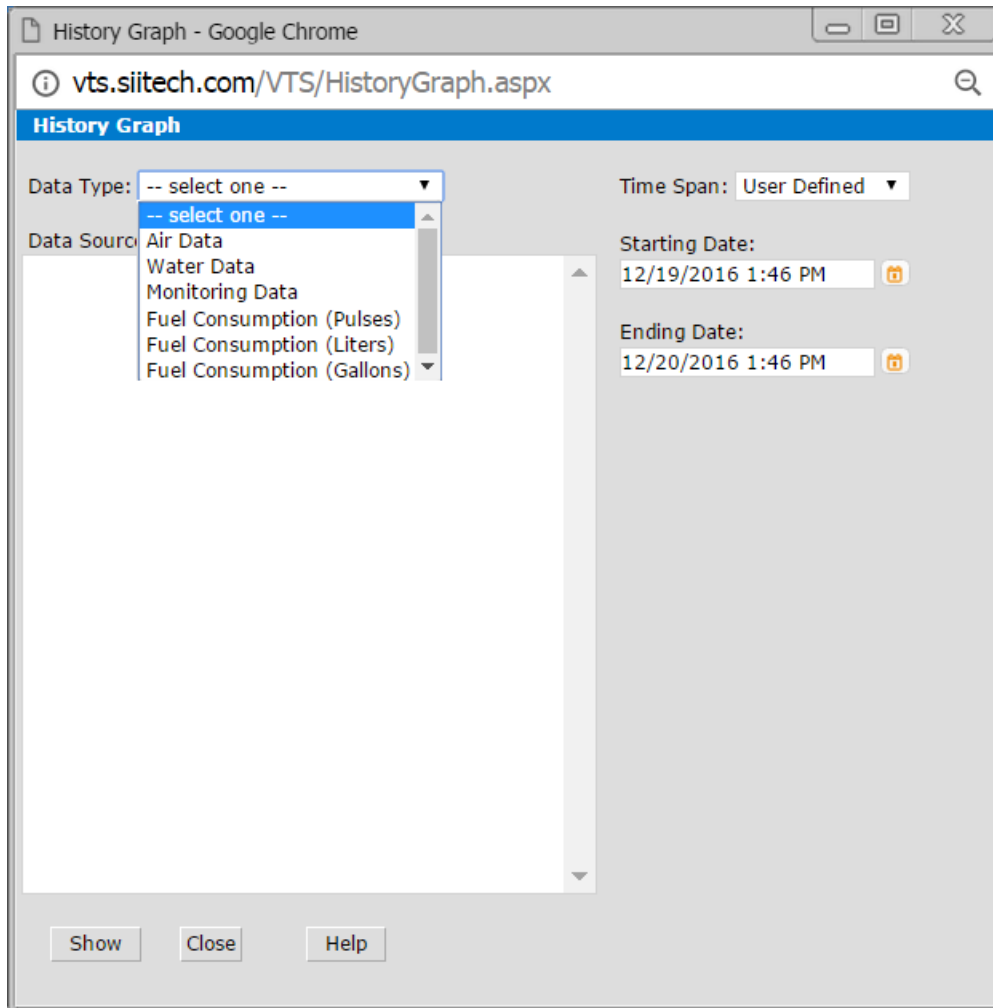

- Click the **History Replay** button  to open the **History Replay** window.
- In the **Date** field, enter the end date of the time interval.
- In the **Time Span** field, enter the desired length of the time interval.
- Click the **All Paths** button. This will show paths for all ships on the chart view in the screen area.
- Click the **Download Data** button to download the path data onto your computer.
- To remove the ship's path from the chart view, click the **Clear** button.
- To close the window, click the **Close** button.

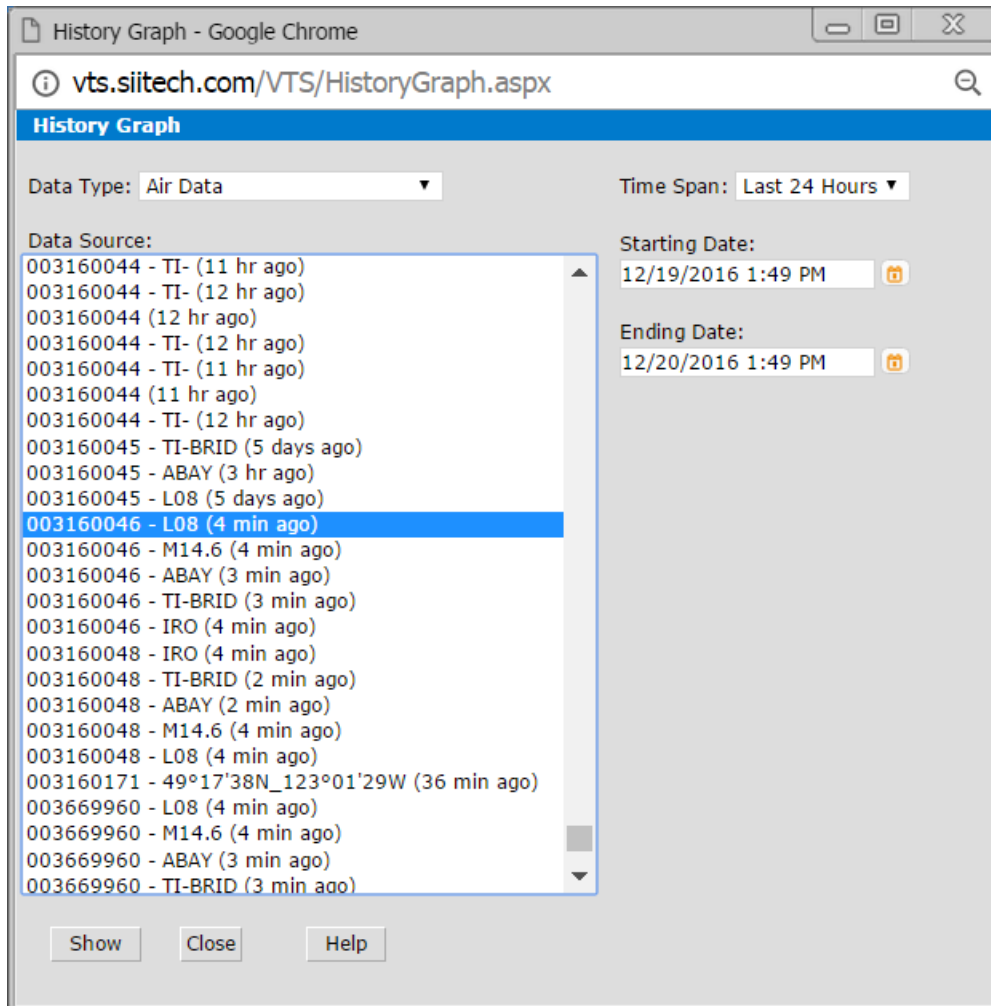

Historical Data Graphs

You may display AtoN data and fuel consumption data as a graph or download this data in .CVS format.

Click the **Show Historical Data Graphs and Download Historical Data** button  to open the **History Graph** form.

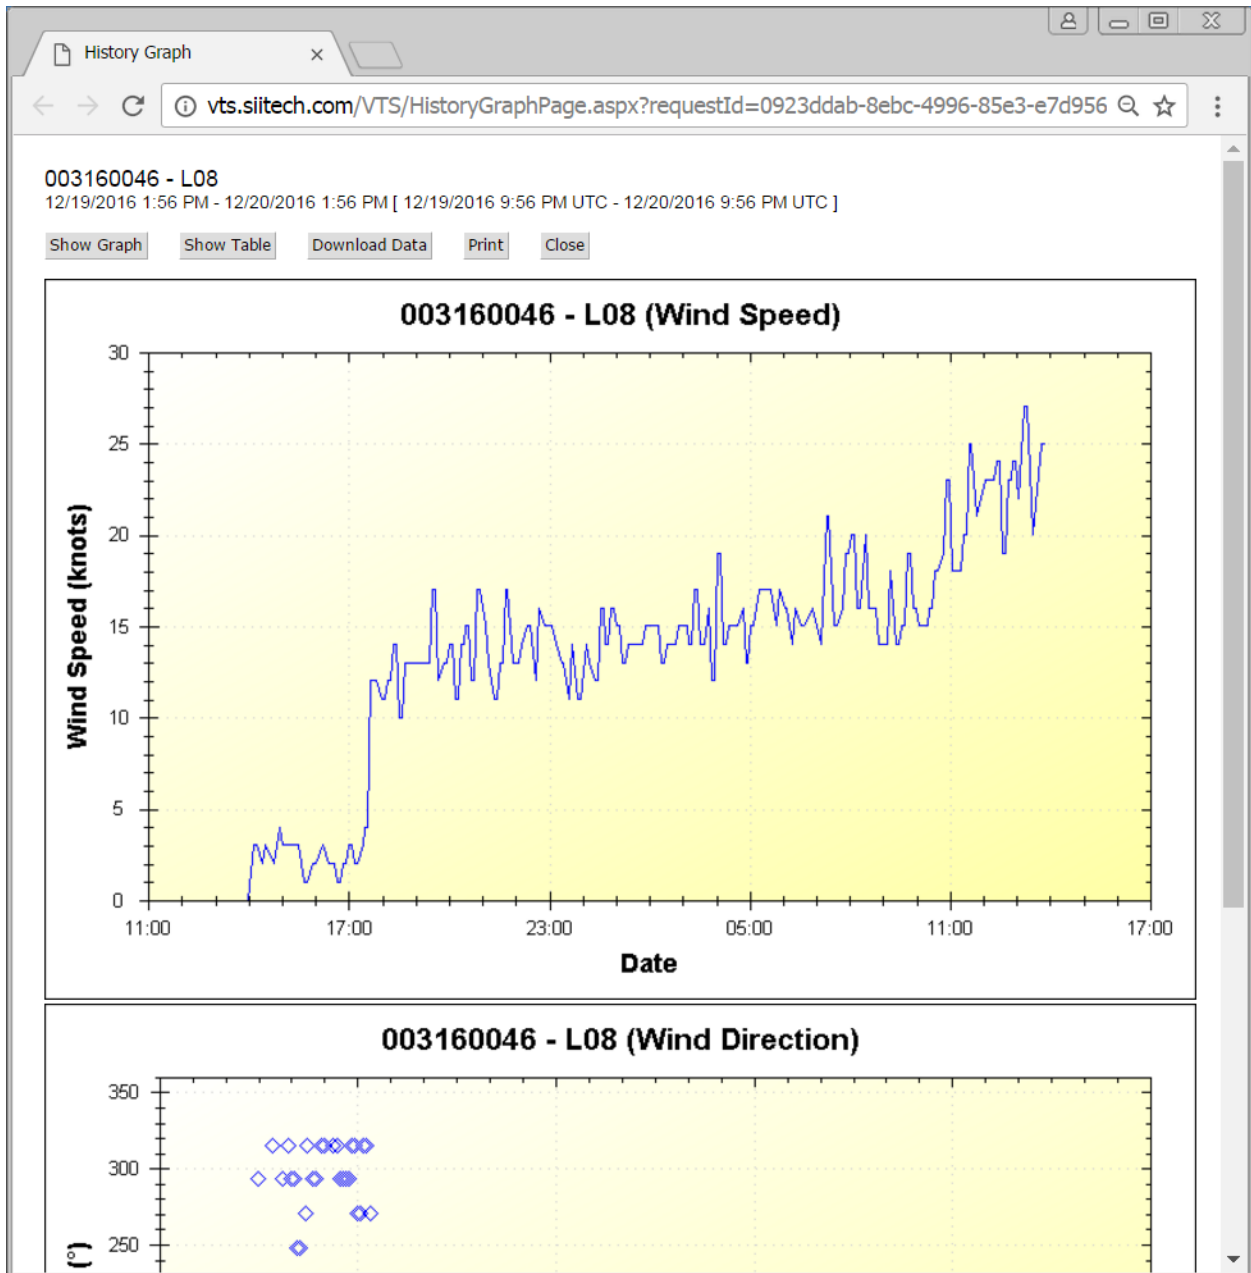

Select the type of data you want to see from the **Data Type** drop-down list.

In the **Data Source** list, select the source of data (e.g. choose the AtoN name).

To use a predefined time interval, select an option from the **Time Span** drop-down list. To specify your own time interval, select 'User Defined' under **Time Span**, and use the **Starting Date** and **Ending Date** fields to specify the time range.

Click the **Show** button to plot the graphs.

Click the **Download Data** button to download the data to your computer as a .CVS file.

If your ship is equipped with the SiiTech Fuel Consumption unit, you may use this form to monitor fuel consumption and to download fuel consumption data on your computer.

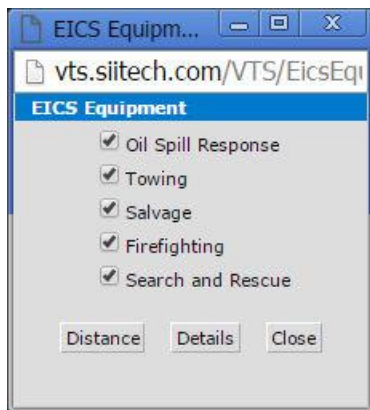

Emergency and Incidents

Emergency and Incident Command Support

This feature of Web VTS provides operators with the ability to find and filter rescue ships by oil spill response, towing, salvage, firefighting, or search and rescue equipment on board.

In the case of an emergency or incident, a Web VTS operator can quickly find the location of a ship with appropriate rescue equipment on board and make rescue action decisions.

Open the **Emergency and Incident Command Support (EICS) Equipment** window by clicking the **EICS** button  in the toolbar.

- **Fire Fighting:** Select this check box to monitor ships with fire fighting equipment on board. By default this check box is checked. All ships that have fire fighting equipment on board appear as a red circle surrounding the original triangle .
- **Life Saving:** Select this check box to monitor ships with life saving equipment on board. By default this check box is checked. All ships that have life saving equipment on board appear as a blue circle surrounding the original triangle.
- **Oil Spill Response:** Select this check box to monitor ships with oil spill response equipment on board. By default this check box is checked. All ships that have oil spill response equipment on board appear as a blue circle surrounding the original triangle.

To be able to display what equipment the ship has on board, left-click on any circle and the **Ship Data** panel should appear.

AtoN Monitoring

AtoN List

You can view all AtoN-related information by clicking **AtoN List** button  in the toolbar.

Area. Set the area of monitored data. Select "Screen" from the **Area** drop-down list to view AtoN information for the AtoNs which are visible in your current map view. Select "All" to view AtoN information for all AtoNs in the system.

Data Type. Set the type of monitored data. Select "AtoN" from the **Data Type** drop-down list to view general AtoN information. Select "Meteo Data" to view meteorological data sent from AtoNs. Select "Monitoring Data" to view data related to AtoN health and status.

Time Span. Set the time span of monitored data. Use the **Time Span** drop-down list to select how far back in time you want to view AtoN information.

Refresh every ___ sec. Use this field to type how often you would like to check for recently sent messages and click the **Set** button to apply your changes.

Filter AtoNs By. Use the **Name** or **MMSI** fields to list specific AtoNs only. Type AtoN name or MMSI into the appropriate field and click the **Apply** button. *Note:* You may use only part of the name or MMSI number for the search.

Click the **Find** link (on the left side of AtoN's MMSI number) to center your desired AtoN within the current map view.

Add/Edit AtoN Details

Click the **Add** link to open the **AtoN Details** form and enter information for the selected AtoN.

The screenshot shows a web browser window titled "AtoN Details - Google Chrome" with the URL `vt.siiotech.com/VTS/Aton.aspx?mmsi=58&ReturnUrl=AtonList.aspx%3fpage%3d0`. The form is titled "Add AtoN" and contains the following fields and controls:

- Name: V-58 *
- MMSI: 000000058 *
- AIS AtoN Station: [Dropdown]
- AtoN Type: Reference point [Dropdown]
- AIS AtoN Implementation: Virtual [Dropdown]
- Latitude: 36.914833
- Longitude: -6.201000
- Report Interval for Msg.6: [Input] minute(s)
- Report Interval for Msg.8: [Input] minute(s)
- Report Interval for Msg.21: [Input] minute(s)
- Air Temperature: Auto [Dropdown]
- Air Pressure: Auto [Dropdown]
- Humidity: Auto [Dropdown]
- Wind Speed: Auto [Dropdown]
- Wind Gust: Auto [Dropdown]
- Wind Direction: Auto [Dropdown]
- Wind Gust Direction: Auto [Dropdown]
- Visibility: Auto [Dropdown]
- Water Temperature: Auto [Dropdown]
- Water Level: Auto [Dropdown]
- Current Speed: Auto [Dropdown]
- Current Direction: Auto [Dropdown]
- Current Speed 2: Auto [Dropdown]
- Current Direction 2: Auto [Dropdown]
- Current Speed 3: Auto [Dropdown]

Buttons at the bottom: OK, Cancel, Apply, Help. A "Delete" button is located next to the Name field.

You can use this form to input all important information regarding your selected AtoN:

- Name
- Location
- Report intervals
- Additional information sent by this AtoN (meteorological and monitoring data)
- AtoN image

Add/Edit AtoN Alarms

Click the **New** link (at the far right side of the table) to open the **AtoN Alarm** form.

Instrument Panel

You may use the Instrument Panel to view weather data or AtoN monitoring data in real-time.

Click the **Instrument Panel** button  to open the **Instrument Panel** in a new window.

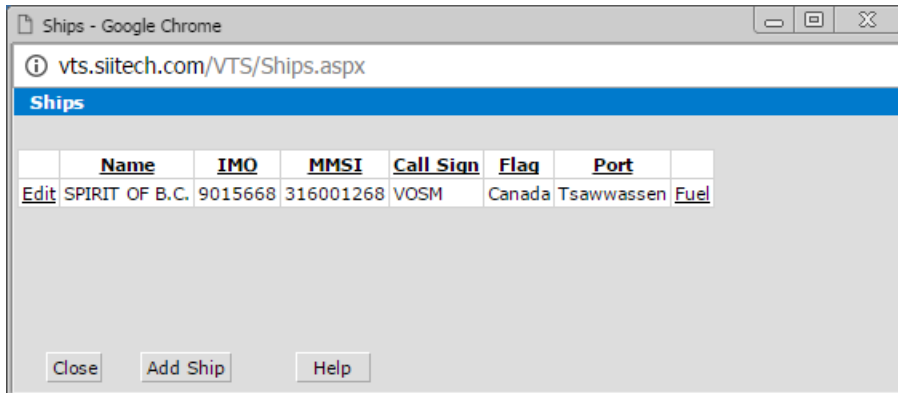

- Select 'All' from the **Area** drop-down list to view the list of all AtoNs in the system. Select 'Screen' from the **Area** drop-down list to view only those AtoNs visible on your current map view.
- Use the **Refresh every** field to automatically refresh the instrument panel.
- Click the **Show Trend** button to see the trend graphs for the time span selected from the drop-down list.
- Use the **Data Type** drop-down list to specify the type of AtoN data.

Fuel Consumption

Click the **Fuel Consumption by Speed** button  to open the **Fuel Consumption by Speed** window.

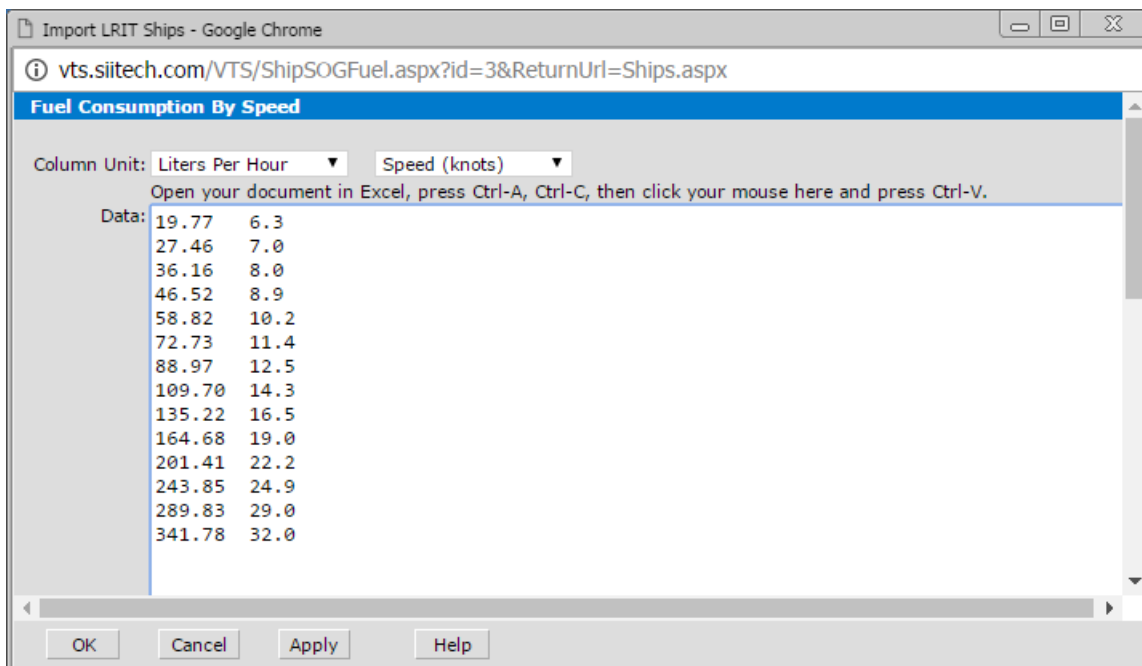

You may use this form to estimate the fuel consumption of a particular ship.

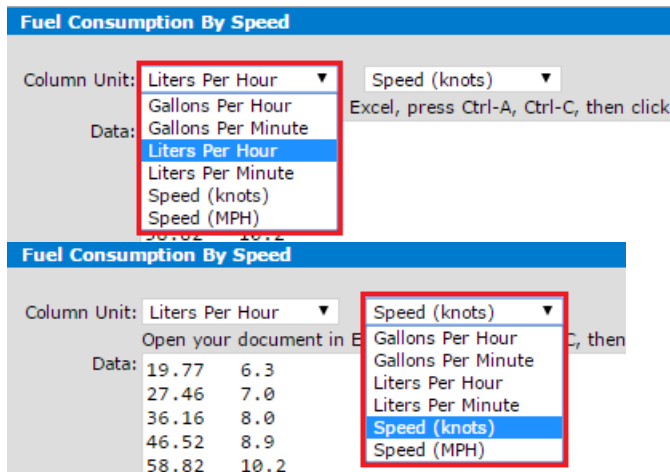

Click the **Edit** link in the first column of the table to go to the **Ship** window and edit an existing ship.

Click the **Add Ship** button to add a new ship to the list.

Click the **Fuel** link in the last column of the table to open the **Fuel Consumption by Speed** window. You may use this window to enter the fuel consumption by speed data for the selected ship. This data will be used to estimate the ship fuel consumption as a function of its speed.

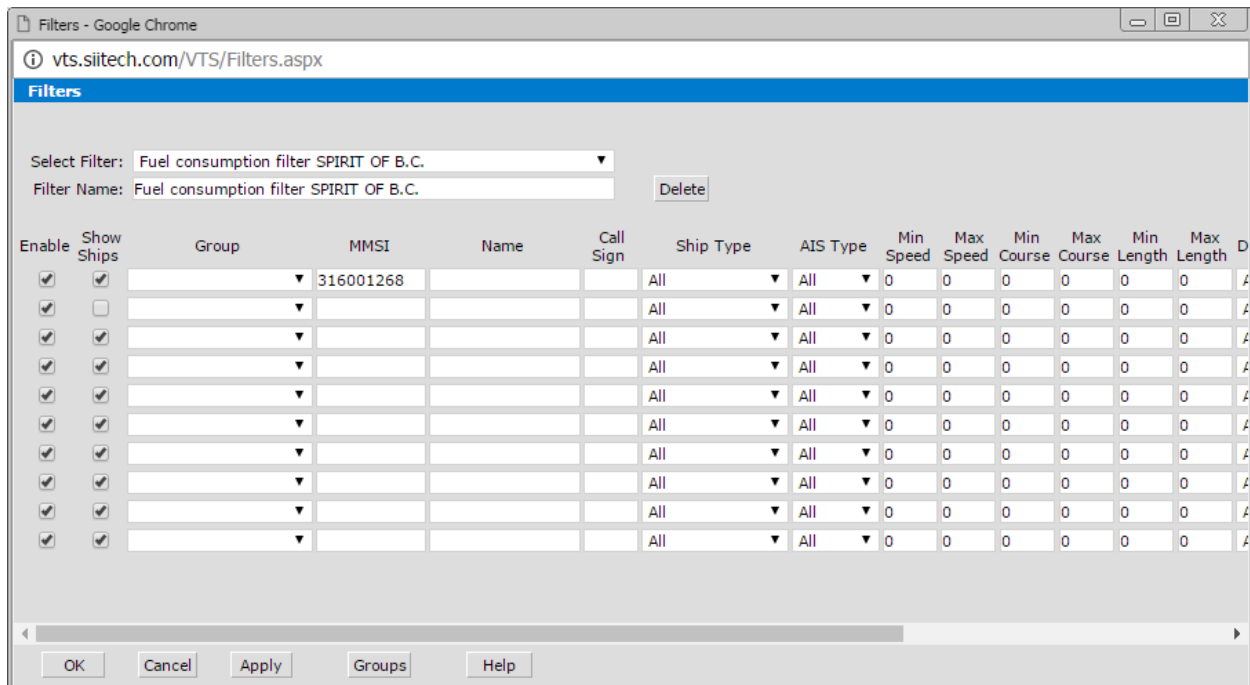

Select the units for the data in the first column and second column from the drop-down lists.

To generate an **Estimated Fuel Consumption** report:

1. Create a filter for the selected ship.

2. Create an **Estimated Fuel Consumption** report for the selected ship. Select the filter created in the previous step from the **Filter** drop-down list. Enter the time span for this report. Click **Apply** to save your changes.

The screenshot shows a web browser window titled 'Reports - Google Chrome' with the URL 'vts.siitech.com/VTS/Reports.aspx'. The page has a blue header with the word 'Reports'. Below the header, there are several configuration options:

- 'Select Report:' dropdown menu set to 'Estimated Fuel Consumption'.
- 'Report Name:' text input field containing 'Estimated Fuel Consumption' and a 'Delete' button.
- 'Enable' checkbox which is checked.
- 'Report Type:' dropdown menu set to 'Estimated Fuel Consumption'.
- 'Time Span:' text input field containing '24' and a 'Hours' dropdown menu.
- A table with columns 'Enable', 'Zone', and 'Filter'. The 'Enable' column has five checked checkboxes. The 'Zone' column has five empty dropdown menus. The 'Filter' column has one dropdown menu set to 'Fuel consumption filter SPIRIT OF B.C.' and four empty ones.
- A 'Test' button.
- A note: 'Remember if you make any changes to the report, you must save it before testing.'
- At the bottom, there are 'OK', 'Cancel', 'Apply', and 'Help' buttons.

Click **Test** to generate a report.

OK Cancel Apply Help

The system will show the camera location on the map.

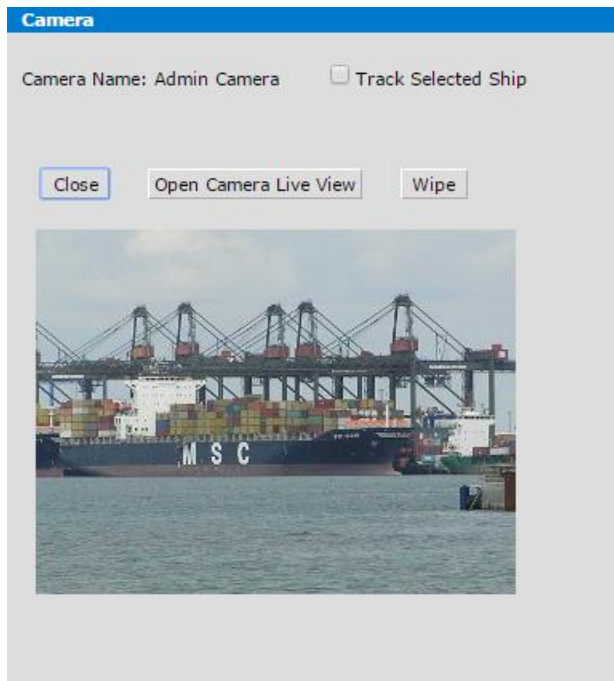

To open the camera, right-click on the main map view and select **Open Camera** from the menu.

You will see the picture captured by the camera.

SiiTech Web VTS Manual

To use the camera for tracking a particular ship:

1. Check the **Track Selected Ship** box.
2. Select the ship on the main map view (click on the ship icon).

Digital Selective Calling Inbox

Digital selective calling (DSC) is a standard for sending pre-defined digital messages via the medium-frequency (MF), high-frequency (HF) and very-high-frequency (VHF) maritime radio systems. It is a core part of the Global Maritime Distress Safety System (GMDSS).

Click the **DSC Inbox** button  to open the **Digital Selective Calling (DSC) Inbox** in a new window.

Show Class A target as a triangle

Show Class B target as a triangle

Show Register Button on Login page. Check the box to allow new users to register on your website.

Show OpenStreetMap. Check the box to allow users to use OpenStreetMap.

Show Bing Maps. Check the box to allow users to use Bing Maps.

Bing Maps Key. Enter a valid Bing Maps key into this field.

(Note: If you need help obtaining a Bing Maps Key, please visit: <https://msdn.microsoft.com/en-us/library/ff428642.aspx>).

Show Chart Button. Check the box to allow users to use S-57 and BSB nautical charts.

Charts Server URL. Enter the Web Chart server URL if S-57 or/and BSB nautical charts are enabled.

Default Map Mode. Select a default map type from the drop-down list.

Default Map Zoom. Select a default zoom level from the drop-down list.

Default Latitude and Longitude. Use this field to type the coordinates of the default location.

Set current settings as default. Click to set your current settings as the default map settings.

Default Filter. Select the default filter to be automatically applied to every user in this system.

History DB Connection. Use this field to set the history database connection string. This database must be specified in the AIS Server's AIS Database service. See "AIS Server Administrator's Guide" for more information.

History DB Split. Select the period of time represented by each part of the history database. This parameter must match **Split database** in the AIS Server's AIS Database service, which is used to collect history data. See "AIS Server Administrator's Guide" for more information.

Report DB Connection. Use this field to set the report database connection string. This database must be specified in the AIS Server's AIS Database service. See "AIS Server Administrator's Guide" for more information.

Report DB Split. Select the period of time represented by each part of the report database. This parameter must match **Split database** in the AIS Server's AIS Database service, which is used to collect report data. See "AIS Server Administrator's Guide" for more information.

Note: If you want to use all of your historical data or reporting, **Report DB Connection** must be identical to **History DB Connection**.

VTS Server Address. Set the IP address of the computer where the AIS Server's VTS Server service is running. This value is usually **127.0.0.1**.

VTS Server Port. Set the box port number used by the AIS Server's VTS Server service. This value is usually **9007**.

Keep Last Position. Enter the number of minutes the last selected ship's position must be shown on the screen after the ship's transponder has turned off. Enter "0" in this field to use the system's default parameters.

Show Class A target as a triangle. Check the box to show ships equipped with Class A transponders as triangles.

Show Class B target as a triangle. Check the box to show ships equipped with Class B transponders as triangles.
